PREFACE TO THE FIFTH EDITION

EU law has developed very significantly since the 4th edition of this book and we have incorporated these developments as fully as possible in the new edition. The most notable change has, of course, been the ratification of the Lisbon Treaty, which represents the culmination of ten years of discussion of Treaty reform that began after the Nice Treaty. The major institutional and substantive changes made by the Lisbon Treaty are fully reflected in the new edition, with modification of existing chapters, the creation of new chapters, and rearrangement of the order of the material in parts of the book.

The last four years have also seen major case law developments in all areas, more especially in the fields of citizenship, free movement of goods, workers, services and freedom of establishment, international relations law, human rights, and equal treatment. This has been matched by legislative developments in areas such as single market integration and the Area of Freedom, Security and Justice. The Commission has produced many policy initiatives in different fields, proposing how particular areas of EU law should develop, and laying the ground for more detailed legislative initiatives over the forthcoming years. All of this has been accompanied by a vibrant academic literature.

The new edition reflects these developments and we have tried throughout the book to give a balanced account of this diverse material. As always, there have been difficult choices as to what to include, given the very large range of subject matter that now falls within the remit of EU law. To take but one example, the AFSJ now covers at least three major areas—broadly speaking migration law, criminal law, and civil law—each of which could warrant a separate chapter if not a separate book. There was, however, insufficient space for three chapters, and we decided on this occasion to use the chapter to give a general overview of the AFSJ and then to focus mainly on one of these three areas: the challenges posed by EU initiatives relating to criminal law. We shall keep this issue under review in future editions, and that is equally true for the topics covered (as well as those not covered) in the other chapters.

We would like to thank all those at OUP who have helped with this edition of the work, with special thanks to Kate Whetter and Anya Aghdam. Kate Elliott has been with us as copy-editor since the first edition of this book. She has, as always, been terrific in this role. Thanks also to the excellent research assistants who have done so much to help with preparation of this edition: Stanislas Adam, Peter Dunne, Sacha Garben, Damjan Kukovec, Ettore Lombardi, Rasmus Naeyé, Rowan Pennington-Benton, Kristina Schoenfeldt, Jannis Werner, Anja Wiesbrock, and Maja Zerjal.

Paul Craig

NEW TO THIS EDITION

- Detailed coverage of the Treaty of Lisbon, its impact on the Institutions of the European Union, and the effects on substantive areas of European law.
- Substantially revised chapters on:
  - the institutions of the EU,
  - legal instruments, dealing with the new hierarchy of legal acts,
  - competence,
  - legislation and decision making,
  - human rights, including coverage of *Kadi* and other anti-terrorist sanctions cases,
  - citizenship, including coverage of the *Rottman*, *Ruiz Zambrano*, *McCarthy*, and other recent cases,
  - international relations law, covering all the institutional and substantive changes introduced by the Lisbon Treaty,
  - anti-discrimination law, including full coverage of the Article 19 Race Directive and Framework Equality Directives; also case law including *Test-Achats, Roca Alvarez,* and the many age discrimination cases.
- A new chapter focusing on EU cooperation in criminal law and justice.

OUTLINE CONTENTS

1.	The Development of European Integration	1
2.	The Institutions	31
3.	Competence	73
4.	Instruments and the Hierarchy of Norms	103
5.	Legislation and Decision-making	121
6.	New Forms of Governance	158
7.	The Nature and Effect of EU Law: Direct Effect and Beyond	180
8.	The Application of EU Law: Remedies in National Courts	218
9.	The Relationship between EU Law and National Law: Supremacy	256
10.	EU International Relations Law	302
11.	Human Rights in the EU	362
12.	Enforcement Actions against Member States	408
13.	Preliminary Rulings	442
14.	Review of Legality: Access	485
15.	Review of Legality: Grounds of Review	519
16.	Damages Actions and Money Claims	557
17.	The Single Market	581
18.	Free Movement of Goods: Duties, Charges, and Taxes	611
19.	Free Movement of Goods: Quantitative Restrictions	637
20.	Free Movement of Capital and Economic and Monetary Union	693
21.	Free Movement of Workers	715
22.	Freedom of Establishment and to Provide Services	764
23.	Citizenship of the European Union	819
24.	Equal Treatment and Non-Discrimination	854
25.	AFSJ: EU Criminal Law	923
26.	Competition Law: Article 101	959
27.	Competition Law: Article 102	1011
28.	Competition Law: Mergers	1046
29.	The State and the Common Market	1072

LISBON TABLE OF EQUIVALENCES[1]

TREATY ON EUROPEAN UNION

Old numbering of the Treaty on European Union	New numbering of the Treaty on European Union
TITLE I – COMMON PROVISIONS	TITLE I – COMMON PROVISIONS
Article 1	Article 1
	Article 2
Article 2	Article 3
Article 3 (repealed)[2]	
	Article 4
	Article 53
Article 4 (repealed)[4]	
Article 5 (repealed)[5]	
Article 6	Article 6
Article 7	Article 7
	Article 8
TITLE II – PROVISIONS AMENDING THE TREATY ESTABLISHING THE EUROPEAN ECONOMIC COMMUNITY WITH A VIEW TO ESTABLISHING THE EUROPEAN COMMUNITY	TITLE II – PROVISIONS ON DEMOCRATIC PRINCIPLES
Article 8 (repealed)[6]	Article 9
	Article 10[7]
	Article 11
	Article 12
TITLE III – PROVISIONS AMENDING THE TREATY ESTABLISHING THE EUROPEAN COAL AND STEEL COMMUNITY	TITLE III – PROVISIONS ON THE INSTITUTIONS
Article 9 (repealed)[8]	Article 13

[1] Tables of equivalences as referred to in Article 5 of the Treaty of Lisbon. The original centre column, which set out the intermediate numbering as used in that Treaty, has been omitted.

[2] Replaced, in substance, by Article 7 of the Treaty on the Functioning of the European Union ('TFEU') and by Articles 13(1) and 21, paragraph 3, second subparagraph of the Treaty on European Union ('TFEU').

[3] Replaces Article 5 of the Treaty establishing the European Community ('TFEU').

[4] Replaced, in substance, by Article 15.

[5] Replaced, in substance, by Article 13, paragraph 2.

[6] Article 8 TEU, which was in force until the entry into force of the Treaty of Lisbon (hereinafter 'current'), amended the TEC. Those amendments are incorporated into the latter Treaty and Article 8 is repealed. Its number is used to insert a new provision.

[7] Paragraph 4 replaces, in substance, the first subparagraph of Article 191 TEC.

[8] The current Article 9 TEU amended the Treaty establishing the European Coal and Steel Community. This latter expired on 23 July 2002. Article 9 is repealed and the number thereof is used to insert another provision.

TITLE III – PROVISIONS AMENDING THE TREATY ESTABLISHING THE EUROPEAN COAL AND STEEL COMMUNITY *continued*	TITLE III – PROVISIONS ON THE INSTITUTIONS *continued*
	Article 14[9]
	Article 15[10]
	Article 16[11]
	Article 17[12]
	Article 18
	Article 19[13]
TITLE IV – PROVISIONS AMENDING THE TREATY ESTABLISHING THE EUROPEAN ATOMIC ENERGY COMMUNITY	TITLE IV – PROVISIONS ON ENHANCED COOPERATION
Article 10 (repealed)[14]	Article 20[15]
Articles 27a to 27e (replaced)	
Articles 40 to 40b (replaced)	
Articles 43 to 45 (replaced)	
TITLE V – PROVISIONS ON A COMMON FOREIGN AND SECURITY POLICY	TITLE V – GENERAL PROVISIONS ON THE UNION'S EXTERNAL ACTION AND SPECIFIC PROVISIONS ON THE COMMON FOREIGN AND SECURITY POLICY
	Chapter 1 – General provisions on the Union's external action
	Article 21
	Article 22
	Chapter 2 – Specific provisions on the common foreign and security policy
	Section 1 – Common provisions
	Article 23
Article 11	Article 24
Article 12	Article 25
Article 13	Article 26
	Article 27

[9] – Paragraphs 1 and 2 replace, in substance, Article 189 TEC; – paragraphs 1 to 3 replace, in substance, paragraphs 1 to 3 of Article 190 TEC; – paragraph 1 replaces, in substance, the first subparagraph of Article 192 TEC; – paragraph 4 replaces, in substance, the first subparagraph of Article 197 TEC.

[10] Replaces, in substance, Article 4.

[11] – Paragraph 1 replaces, in substance, the first and second indents of Article 202 TEC;
– paragraphs 2 and 9 replace, in substance, Article 203 TEC;
– paragraphs 4 and 5 replace, in substance, paragraphs 2 and 4 of Article 205 TEC.

[12] – Paragraph 1 replaces, in substance, Article 211 TEC;
– paragraphs 3 and 7 replace, in substance, Article 214 TEC.
– paragraph 6 replaces, in substance, paragraphs 1, 3 and 4 of Article 217 TEC.

[13] – Replaces, in substance, Article 220 TEC.
– the second subparagraph of paragraph 2 replaces, in substance, the first subparagraph of Article 221 TEC.

[14] The current Article 10 TEU amended the Treaty establishing the European Atomic Energy Community. Those amendments are incorporated into the Treaty of Lisbon. Article 10 is repealed and the number thereof is used to insert another provision.

[15] Also replaces Articles 11 and 11a TEC.

THE DEVELOPMENT OF EUROPEAN INTEGRATION

1 CENTRAL ISSUES

i. EU law is a complex and fascinating subject of study. This book aims to illuminate the EU legal and constitutional processes, and to depict some dimensions of the dynamic relationship between the substantive policies of the European Union, their institutions and procedures, and the Member States. It is important to situate legal doctrine in its historical and political context, and this book seeks to do so. It also aims to illustrate the strongly dynamic nature of the EU polity, whose aims, policies, institutional structures, and membership have been in a continuous and vibrant process of development and expansion for several decades.

ii. Reference will be made to the 'European Community' to describe the three Communities originally established in the 1950s, even though, until the amendments made by the Treaty on European Union (TEU) in 1993, the European Coal and Steel Community (ECSC, which expired in 2002), the Economic Community (EEC), and the Atomic Energy Community (Euratom) were, properly speaking, the 'Communities'. After the Maastricht Treaty, the EEC was renamed the European Community, whereas the ECSC and the Euratom retained their original titles. The two constituent parts of the Lisbon Treaty, which came into force on 1 December 2009, are the Treaty on European Union, TEU, and the Treaty on the Functioning of the European Union, TFEU.

iii. This chapter begins with a brief sketch of theories of integration offered to explain its evolution. An awareness of these theories is important to understand why states chose to create the EEC and the reasons for subsequent Treaty changes. This is followed by historical examination of the forces that led to the EEC, describing some of the major political events which contributed to shaping its legal and constitutional structure.

iv. The focus then shifts to analysis of the Treaties and the principal Treaty revisions from the inception of the EEC to the present day. The EEC Treaty is examined, followed by the Single European Act, the Maastricht, Amsterdam, and Nice Treaties. The chapter concludes with examination of the failed Constitutional Treaty and the successful conclusion of the Lisbon Treaty. Three themes should be borne in mind when surveying this development.

v. The first is the distinction between institutional and substantive Treaty amendments. Institutional change connotes the relative power within the EU exercised by the principal players, the Council, European Council, Commission, and European Parliament. Institutional change can also impact on the EU's power in relation to the Member States. Substantive Treaty amendment connotes the subject matter over which the EU has competence.

vi. The second theme is the way in which successive Treaty amendments have made significant changes to the inter-institutional disposition of power within the EU, and to the substantive areas over which it has competence. The relative importance of the varied forces that shaped these changes continues to be debated by commentators, and this is an issue to which we shall return later in the chapter and in the course of the book.

vii. The third theme is the enlargement of the EU. The EEC began with six Member States. There are now twenty-seven Member States. The enlargement of the EU is important in itself, and has been a factor in shaping both institutional and substantive Treaty amendments.

2 EUROPEAN INTEGRATION: THEORIES

The development of European integration has been broadly described in a simplified and linear way: a number of relatively distinct phases of the integration process have been identified, and different theories have emerged to explain the various phases, beginning with the *functionalism* of the 1950s.[1] There was a belief that European integration would best be furthered by focusing initially on discrete economic sectors, which could be managed efficiently and technocratically by supranational institutions, away from the fray of politics.

Following the move from the sectoral Coal and Steel Community to the broader Economic Community in the late 1950s, *neofunctionalist* theory most famously elaborated by Haas in the 1960s[2] emerged as an alternative way of explaining the developing integration process. Functionalist and neofunctionalist theory are briefly described in the following extract.

J Lodge, The European Community and the Challenge of the Future[3]

Functionalism starts from the premise that by promoting functional cooperation among states it may be possible to deter them from settling disputes over competition for scarce resources aggressively. The logic behind the approach is to prevent war not negatively—by keeping states apart—but positively by engaging them in cooperative ventures . . . to establish functionally specific agencies, initially in what were then seen as non-contentious areas like welfare. These were to transcend national boundaries and be managed by rational technocrats (not swung by the vagaries of political ideology and power-hungry political parties) owing allegiance to a functionally specific organization not to a given nation state. . . . Their tasks will cover those areas of the economy essential to running military machines.

Neofunctionalists have a common starting point with functionalists in their attachment to the collective pursuit of mutually beneficial goals leading to enhanced economic prosperity. . . . They argue that competitive economic and political elites mediate in the process and not only become involved in it but become key players. . . . Neofunctional integration sees integration as a process based on spill-over from one initially non-controversial, technical sector to other sectors of possibly greater political salience, involving a gradual reduction in the power of national government and a commensurate increase in the ability of the centre to deal with sensitive, politically charged issues.

The assumptions and predictions of neofunctionalism were in turn challenged by what has been described as the intergovernmentalist phase of the Community in the 1970s, during which the

[3] (Pinter, 1993) Introduction, xix.

supranational political Community institutions appeared to lose initiative and influence, and the interests of individual Member States, most clearly symbolized by the so-called Luxembourg veto, dominated the process.

Neofunctionalist arguments were challenged by *neo-realist*[4] and *neo-rational* accounts, amongst which *liberal intergovernmentalism* emerged as a particularly prominent theory,[5] presenting states rather than supranational institutions as the key actors in the integration process, seeking essentially to pursue their own respective preferences and to protect their sphere of power. These theories were applied to the renewed dynamism and deepening of the integration process in the 1980s, with the signature of the Single European Act (SEA)[6] and the Intergovernmental Conferences (IGCs) of the early 1990s leading to the Maastricht Treaty, although the events of this period also generated counter-claims of a *neo-federalist* revival.

From the late 1980s, the supranationalism-intergovernmentalism dichotomy that underpinned the debate between the two major integration theories of neofunctionalism and neo-realism has been questioned by literature which sees the EU as a system of *multi-level or network governance*.[7] Rather than focusing debate principally on whether it is Member State governments or Europe's supranational institutions that drive the integration process, increased attention has been paid to the wide range of actors and institutions involved at different levels in lawmaking and policy-making within the European Union. Thus we see a broader concept of institutions in use,[8] and a focus which goes beyond national and supranational actors and institutions to include the subnational, infra-national, public, and private entities that participate in the system of governance. A range of alternatives to, or variants on, the dominant integration theories has emerged,[9] and new debates and divisions are replacing the traditional intergovernmental-supranational/neofunctionalist-neo-realist polarities, such as those between 'rationalist' approaches, which view decision-making as being driven by the pursuit of material interests by strategic actors, and 'constructivist' approaches which lay more emphasis on the influence of norms, ideas, and principles in the process of integration.[10]

3 EUROPEAN INTEGRATION: BACKGROUND

Most contemporary accounts of European integration begin with the aftermath of the Second World War, and the desire for peace in Europe. After the destruction of the war years, and the climate of nationalism which preceded them, many hoped for a new model of political cooperation in Europe. This important point in the story of modern European integration, however, should be considered in a much longer time-frame. Ideas of European unity were articulated long before the arrival of the twentieth century, including the call in 1693 by a prominent English Quaker, William Penn, for a European Parliament and the end of the state mosaic in Europe.[11]

During the war, the Resistance movement had strongly supported the idea of a united Europe, to replace the destructive forces of national chauvinism.[12] However, despite the urgings of federalists such as Spinelli, the movement for integration faltered after the war, especially after the electoral defeat in the UK of Churchill, who had been a strong proponent of European unity. Promptings towards greater European cooperation, however, came from other sources. Faced with the cold war and with Europe's severe post-war economic problems, the USA in 1947, the same year in which the General Agreement on Tariffs and Trade (GATT) was signed in an effort to liberalize world trade,[13] announced the Marshall Plan, to provide financial aid for Europe. The USA required an organization to administer the programme. This became, in 1948, the Organisation for European Economic Co-operation (OEEC) and in 1960, the Organisation for Economic Co-operation and Development (OECD). Although essentially intergovernmental, the OEEC required some institutionalized coordination between the European states which received aid, and provided useful experience for more developed forms of cooperation to come.[14]

Further examples of early cooperation in defence and other matters are evident in the 1948 Brussels Treaty between France, the UK, and the three Benelux countries, the North Atlantic Treaty Organization (NATO), signed in 1949, and the Western European Union (WEU), created in 1954. On the economic side, Belgium, the Netherlands, and Luxembourg signed the Benelux Treaty in 1944, establishing a customs union. Developments towards political union were stalled by the UK, when, after the 'Congress of Europe' was convened at the Hague in 1948 to draw up proposals for European unity, the UK insisted on an intergovernmental organization that would not compromise state sovereignty.

What emerged was the Statute on the Council of Europe, signed in 1949, providing for a Committee of Ministers and a Parliamentary Assembly. The latter had few powers beyond making recommendations to the Committee of Ministers, a twice-yearly meeting of the foreign ministers of the signatory states. However, the Council of Europe became involved in many cultural, economic, and scientific activities, and collaborates with other international organizations including the EU. Its best-known achievement was the European Convention on Human Rights (ECHR), which was signed in 1950 and came into force in 1953. The Convention established a Commission and subsequently a Court of Human Rights, which were merged into a single court when the 11th Protocol to the ECHR was ratified by the Council of Europe Member States and came into force in 1998. Further, the Council of Europe's Social Charter was signed in 1961 and came into force in 1965, and although lacking the stronger legal enforcement mechanisms of the ECHR, it has been important in the field of social and economic rights, complementing the focus on civil and political rights in the ECHR.

[13] The GATT 1947 was replaced in 1994, after the very lengthy Uruguay Round negotiations, and the World Trade Organization came into force in 1995.

[14] M Holland, *European Integration From Community to Union* (Pinter, 1993) 23.

Given the failure to convince Britain to participate in more concrete moves towards European integration, the French foreign minister, Robert Schuman, proposed the pooling of Franco-German coal and steel resources under a single High Authority, with the option for other European states to participate. The plan had been drafted by Jean Monnet, a committed federalist. The plan was not only economically inspired, but represented an attempt to restabilize relations between France and Germany after the war, to allay French fears about any German military threat, and to bind them within a limited framework of peaceful cooperation in order to avert rivalry over coal production.[15]

The Schuman proposal led to the setting-up of the European Coal and Steel Community (ECSC), with a limited life-span of fifty years, to expire in 2002. This was the first significant step towards European integration going beyond intergovernmentalism, establishing a supranational authority whose independent institutions had the power to bind its constituent Member States. The ECSC Treaty was signed in 1951 by France, Germany, Italy, and the three Benelux countries, to establish a common market in coal and steel. Four institutions were set up: a High Authority, made up of nine independent appointees of the six Member State governments, which was the main executive institution with decision-making power; an Assembly made up of national parliaments' delegates with mainly supervisory and advisory powers; a Council composed of a representative from each national government, with a consultative role and some decision-making powers, and the task of harmonizing the activities of the states and the High Authority; and finally a Court of Justice of nine judges. Since the High Authority could adopt binding decisions by a majority, it was a supranational authority, but its influence was countered in areas in which its decision was not final by the Council, which represented Member States' interests. The ECSC was regarded by its proponents as not merely about coal and steel, but represented a first step towards European integration.[16]

The period between 1951 and 1957 was, however, a mixed one for European integration. France, rather than agree to German rearmament within NATO, as the USA had suggested, proposed in its 1950 Pleven plan the setting-up of a European Defence Community (EDC) with a European army, a common budget, and joint institutions. The EDC Treaty was signed in 1952 by the six ECSC states, with Britain refusing to participate, but progress towards ratification was slow. It was argued that if there was to be a European army, a common European foreign policy would also be needed, and accordingly plans for a European Political Community were drawn up. The 1953 draft statute represented a serious effort at designing a European federation, including a coordinated foreign policy and eventual economic integration. However, these developments were stopped when France, which had been wary of German remilitarization, submitted the EDC Treaty to its national assembly, where the proposal to debate its ratification was rejected.[17] This resulted in a major setback for the integration process and the shelving of plans for defence and political union. It would be thirty-nine years before the Member States ratified another Treaty, signed at Maastricht in 1992, purporting to establish a 'European Union'.

4 EEC AND EURATOM TREATIES

(a) EEC: FOUNDING AND OBJECTIVES

The moves towards integration were not, however, halted. A conference of foreign ministers of the six states in Messina in Italy in 1955 generated agreement on moving in the direction of economic integration. A committee chaired by Paul-Henri Spaak, Belgian Prime Minister and a strong advocate of integration, published in 1956 its report, which contained the basic plan for what became the

European Atomic Energy Community (Euratom) and the European Economic Community (EEC). This time, although the Treaties may have been politically motivated, the focus was specifically economic. There was, unlike with the ECSC, no temporal limit to the Treaty. The economic impetus for the 1957 Treaties was made clear, and the explicit political objectives of the earlier draft European Political Cooperation (EPC) Treaty were avoided.

The primary Treaty objectives were to establish a common market, to approximate the economic policies of the Member States, to promote harmonious development of economic activities throughout the Community, to increase stability and raise the standard of living, and to promote closer relations between the Member States. Barriers to trade were to be abolished and a common customs tariff was to be set up, undistorted competition was to be ensured, national economic and monetary policies were to be progressively coordinated, and fiscal and social policies gradually harmonized. The common market was to be established over a transitional period of several stages, during which tariff barriers would be removed and a common external customs tariff set up. There were to be common policies in agriculture and transport, free movement of workers, companies, the self-employed, goods, and services, and strict control of anti-competitive practices in the various states. A European Social Fund was established to improve employment opportunities, and an Investment Bank to give loans and guarantees and to help less developed regions or sectors. A European Development Fund for overseas countries and territories of some of the Member States was also established.

The Parliamentary Assembly and the Court of Justice were to be shared with the ECSC,[18] but there was to be a separate Council of Ministers and executive authority, the Commission. It was not until the Merger Treaty of 1965 that these institutions were merged and shared by the three Communities.[19] An Economic and Social Committee with advisory status was set up, to be shared with the Euratom Community.

The location of the Community institutions was a matter of some dispute. The Assembly of the ECSC had been located in Strasbourg, with the High Authority, the Council, and the Court of Justice in Luxembourg. The Council, the Commission, the Economic and Social Committee, and the Committee of the Regions are now based in Brussels. The Court of Justice, the General Court, the Court of Auditors, and the European Investment Bank are however based in Luxembourg. The Parliament continues to have its seat in Strasbourg, with its secretariat in Luxembourg and certain sessions and committee meetings in Brussels. These seats were formalized by a Protocol attached to the EC Treaty by the Treaty of Amsterdam, which also determines the seat of some newer institutions.

The Commission was not accorded the same degree of legislative autonomy under the EEC and Euratom Treaties as it had been under the ECSC Treaty, and the Council was given the power of approval of most Commission legislative proposals. However, the Commission was given a very important power as the initiator of legislation and overall 'watchdog' of the Treaties, as well as having certain decision-making powers of its own and being the negotiator of international agreements on behalf of the Community.

Voting in the Council was weighted, giving greater weight to the larger Member States than the smaller, to reflect differences in population. However voting procedure varied according to the nature of the issue. In a very few instances voting was by simple majority, in many other matters by qualified majority, and in others unanimity was required.

The Parliamentary Assembly which, although it called itself the Parliament, was not officially so named until the adoption of the SEA in 1986, had few powers under the original Treaty provisions. It had a consultative role in legislation, but was largely a supervisory body whose powers

[18] This was decided in the Convention on certain Institutions common to the European Communities, signed on the same day as the EEC and Euratom Treaties in 1957.

[19] This Treaty was repealed and replaced, without any substantive amendments, by Art 9 of the Treaty of Amsterdam signed in 1997.

involved questioning the Commission and receiving its annual report. It also possessed, as under the ECSC Treaty, a strong but never-used power of censure, despite the tabling of many motions of censure over the years, including one shortly before the dramatic resignation of the Commission in 1999.[20]

There were important developments in the period between the EEC Treaty and the SEA.

(B) GEOGRAPHICAL REACH OF THE COMMUNITY: ENLARGEMENT

One such development was enlargement of the Community. The UK in the 1950s had chosen to remain outside the EEC, and instead in 1960 set up the European Free Trade Association (EFTA) with six other states: Norway, Sweden, Austria, Switzerland, Denmark, and Portugal. In 1961, after a change of policy, the UK made its first application for Community membership. De Gaulle vetoed this application and a second application in 1967. It was not until De Gaulle's resignation that Britain's application for membership was accepted, together with those of Ireland and Denmark in 1973.

Norway, whose application had also been accepted, failed to ratify the Treaty of Accession after a national referendum voted against Community membership. In 1981 the Community expanded again when Greece became a member. Greenland, however, finally left the Community in 1985 after obtaining a degree of internal legislative independence from Denmark, and Spain and Portugal became members in 1986.

(C) COMMUNITY DECISION-MAKING: INTERGOVERNMENTALISM AND SUPRANATIONALISM

The geographic reach of the Community expanded between the EEC Treaty and the SEA. This period was however marked by tensions between an intergovernmental view of the Community, championed initially by President de Gaulle of France, but not necessarily shared by other Member States, and a more supranational perspective espoused initially by Walter Hallstein, the Commission President. These strains surfaced in various ways during this period.

(i) *The Luxembourg Accords*

The tension erupted into crisis in 1965, when the time came under the transitional provisions of the Treaty for the Council of Ministers to move from unanimous to qualified-majority voting. De Gaulle objected to an important institutional reform proposal made by the Commission, which was combined with a proposal to resolve a conflict over agricultural policy, for the Community to raise its own resources from agricultural levies and external tariffs, instead of being funded by national contributions. He strenuously objected to the 'federalist logic' of the proposal[21] and, after a failure to reach a compromise in the Council, France refused to attend further Council meetings and adopted what became known as the 'empty-chair' policy. This lasted for seven months, from June 1965 until January 1966, after which a settlement was reached, which became known as the Luxembourg Compromise or the Luxembourg Accords.

[20] K Bradley, 'The Institutional Law of the EU in 1999' (1999/2000) 19 YBEL 547, 584; D Dinan, 'Governance and Institutions 1999: Resignation, Reform and Renewal' (2000) 38 JCMS 25; A McMullan, 'Political Responsibility for the Administration of Europe: the Commission's Resignation' (1999) 54 Parliamentary Affairs 703.

[21] Pinder (n 17) 12.

These Accords had a considerable impact on Community development over the next two decades. They were essentially an agreement to disagree over voting methods in the Council. The French asserted that even in cases where the Treaty provided for majority decision-making, discussion must continue until unanimity was reached whenever important national interests were at stake. The other five Member States declared instead that in such circumstances the Council would 'endeavour, within a reasonable time, to reach solutions which can be adopted by all'.[22]

Each side acknowledged the divergence of views on how to proceed if there was failure to reach agreement. In practice, it seems that for many years the French view prevailed. The effect of pleading the 'very important interests' of a state was akin to a veto, which the other Member States would respect. Recourse to qualified-majority voting became the exception rather than the norm. The 'return to intergovernmentalism', as some termed it, with primacy being accorded to an individual Member State's wish even if it was against the majority, affected the dynamics of decision-making in the following years. The shift of power away from the Commission towards the Council also diluted the role of the Parliament, which exercised supervisory powers over the Commission. It emphasized the importance of Coreper, the Committee of Permanent Representatives, which prepared the agenda for Council meetings, since it negotiated between Commission and Council on Commission legislative initiatives.

While the Community was experiencing internal crises, it began nonetheless to find its voice on the international stage as a single entity rather than as six Member States. This could be seen in the 1967 GATT negotiations, and in the signing of the Yaoundé Convention between the EEC and eighteen African states in 1963, which was intended to offer preferential treatment in importation to developing countries.

(ii) *The Emergence of the EPC, European Council, and Comitology*

The Luxembourg Accords enhanced Member State power by according states a *de facto* veto, which even if it was not exercised cast a shadow over Council deliberations and impacted on the resulting Community legislation. The period between the EEC Treaty and the SEA also saw other developments that enhanced Member State power over decision-making.

Intergovernmental cooperation in foreign policy began again in 1970, when the Davignon Report recommended the holding of quarterly meetings of the foreign ministers of the Member States, as well as the establishment of a permanent political secretariat. This became an essentially intergovernmental forum for cooperation in foreign policy, without any developed institutional structure. A second report in 1973 recommended its continuation as a form of cooperation, and it became known as European Political Cooperation (EPC). EPC was successful in enabling the Community to be represented as one voice in other international organizations in which all Member States participated, but also enhanced intergovernmentalism.

In 1974 the European Council was established to regularize the practice of holding summits. This body consisted of the heads of governments of the Member States, with the President of the Commission attending its bi-annual meetings. The European Council's 'summitry' provided the Community with much-needed direction, but represented to some a weakening in the supranational elements of the Community. The European Council was not within the framework created by the Treaties, and it was not until the SEA that it was recognized in a formal instrument. The EPC and European Council enabled Member State interests at the highest level to impact on matters of political or economic concern, and their decisions, while not formally binding, would normally constitute the frame within which binding Community initiatives would be pursued.

The Member States also assumed greater control over the detail of Community secondary legislation, through the creation of what became known as Comitology. The details will be considered

[22] Bull EC 3–1966, 9.

below.[23] Suffice it to say for the present that this enabled Member States to influence the content of secondary Community legislation in a way that had not been envisaged in the original EEC Treaty.

The trend within the Community from early supranationalism towards greater intergovernmentalism from the time of the Luxembourg Compromise until the adoption of the SEA was the subject of much comment.

P Dankert, The EC—Past, Present and Future[24]

The dialectics of co-operation or integration have also continued to dominate the process of European unification—to an increasing extent—ever since 25th March 1957. It has been a continuous 'to and fro' for years, as can be seen from the course of development of the Community institutions. The Council of Ministers, which was originally intended to be a Community body, has now become largely an intergovernmental institution thanks to the famous Luxembourg Agreement, which, under French pressure, put an end to the majority decisions which the Council was supposed to take according to the Treaty on proposals submitted by the European Commission. This rule that decisions could only be taken unanimously had the effect of gradually transforming the Commission into a kind of secretariat for the Council which carefully checked its proposals with national officials before deciding whether or not to submit them. This in turn has a negative effect on the European Parliament which can only reach for power, under the Treaty, via the Commission. The move towards intergovernmental solutions for Community problems reached its peak—after frustrated attempts such as the Fouchet plan at the beginning of the 60s—in the creation of the European Council, the EPC and the EMS.

(iii) *Countervailing Trends: EP Direct Elections, Resources, Budgets, and the ECJ*

It would however be mistaken to think of this period as one in which all developments enhanced the intergovernmental dimension of the Community. There were also trends that strengthened the supranational dynamic of the Community, or should have done so, although, as in the case of direct elections to the EP, the initial outcome was more equivocal.

In 1976, *direct elections to the Parliament* were finally agreed by the Member States, and the first elections took place in 1979. This event should have been a significant development for the Community, since the Parliament became the first Community institution with a direct democratic mandate of sorts, but the elections were not an unqualified success. The equivocal impact of EP direct elections was further underlined because its only role in the legislative process was a right to be consulted when a specific Treaty Article so provided.

M Holland, European Integration From Community to Union[25]

Transnational party cooperation was at a rudimentary level and the decision to run each of the nine European elections independently and according to national electoral rules did little to persuade voters that the elections were any different from their respective national elections. The election issues were not European ones, but reflected national concerns and parochialism: as a result, turnout was disappointingly low, averaging just 62 per cent . . . the United Kingdom having the lowest figure at

[23] Chs 4, 5.
[24] L Tsoukalis (ed), *The EC: Past, Present and Future* (Basil Blackwell, 1983) 7.
[25] Holland (n 14) 42.

32.6 per cent. . . . Faced with this apparent popular disinterest, the first direct elections failed to provide the anticipated springboard for accelerated integration; rather, as the Community entered the 1980s, the popular legitimacy and future development of the Community came into question and a renewed trend towards more modest intergovernmental cooperation emerged.

The supranational dimension to the Community was more unequivocally enhanced by developments relating to *resources and the budget*. In 1969 agreement was reached on funding from the Community's own resources rather than from national contributions, and on the expansion of the Parliament's role in the budgetary process.[26] The political significance of these issues, which were brought about in the first budgetary Treaty of 1970 and the Own-Resources Decision of the same date, lies in the financial independence achieved by the Community and in the strengthening of the Parliament's desired role as a decision-maker.[27] By 1975, the date by which the Community budget was required to be financed entirely from its own resources, a second budgetary treaty had been agreed, with further increases in the Parliament's budgetary role.[28] While these developments gave the Community greater financial independence, there were nonetheless serious disagreements between the Member States as to the use of such resources, more especially how much should be spent on the Common Agricultural Policy.

The *judicial contribution* to the supranational dynamic of the Community was especially important in this period. It will be seen that often when the Community's political processes were less active or in crisis, the Court contributed to its legal development and to the process of integration in a variety of ways. Thus, the ECJ sanctioned a broad reading of Article 308 EC, thereby enhancing the Community's sphere of competence.[29] It used the doctrine of direct effect in the 1960s and 1970s to make Community policies more effective.[30] It was in the 1970s, too, that the Court triggered a policy of 'negative integration' and influenced the Commission in its subsequent single market strategy by interpreting very broadly Treaty provisions on the abolition of non-tariff barriers to the free movement of goods.[31] The principle of the supremacy of Community law over national law served to reinforce these judicial strategies.[32]

5 SINGLE EUROPEAN ACT

Notwithstanding the countervailing tendencies described in the previous section, the 1960s and 1970s were often referred to as a period of political stagnation or malaise in the Community, with the Commission having considerable difficulty in securing Council agreement to its proposals. The result was that the attainment of Treaty objectives was often significantly delayed.

This malaise is reflected in the reports during this period that attested to the need for institutional reform, combined with a change of approach from the key institutional players. This is exemplified by the Tindemans Report in 1974–5; that of the 'Three Wise Men' in 1978,[33] both of which recommended

[26] Arts 272–273 EC were amended to reflect the Parliament's increased budgetary powers, which also shifted from Council to Parliament the symbolically important task of adopting the budget.

[27] The Community's own resources would hence come from agricultural levies, from customs duties on products from outside the Community, and from a maximum of 1 per cent Value Added Tax (VAT) as applied to an assessment basis determined uniformly for the Member States.

[28] A Court of Auditors was established by the 1975 Treaty to oversee Community revenue and expenditure, and in 1992, following amendments made by the TEU, it acquired official status as the fifth Community institution.

strengthening the supranational elements of the Community, and diminishing the impact of intergovernmentalism, but neither was acted on; the Genscher–Colombo plan, put forward by the foreign ministers of Germany and Italy, prompted the European Council to issue a 'Solemn Declaration on European Union' in 1983, but nothing more concrete materialized;[34] radical reform was suggested by the European Parliament in 1984 in a 'Draft Treaty on European Union', but it was largely ignored.

Finally, however, after the Fontainebleu European Council summit of 1984, two committees were established to consider Treaty revision and political integration: the Adonnino Committee on a people's Europe considered furthering a European identity,[35] and the Dooge Committee looked at political reform. Although the Dooge Report was not acted on, the 1985 European Council in Milan agreed, voting for the first time by majority only, to convene an intergovernmental conference under what was then Article 236 EEC, to discuss Treaty amendment. This led to the SEA. The reasons why the Member States were willing to accept Treaty reform at this juncture will be considered more fully below.[36]

In 1985 the British Commissioner, Lord Cockfield, drew up on behalf of the Commission a precise timetable for the completion of the internal market, known as the 'White Paper', setting out a long list of the barriers to be removed before a deadline of 1992.[37] The SEA represented a political commitment to this deadline by the Member States.

(A) INSTITUTIONAL CHANGES

The SEA may not have been as far-reaching as reforms advocated by reports in the 1970s and 1980s, but it nonetheless made significant institutional reforms. The most important change enhanced the EP's power in the legislative process, through the creation of the new legislative 'cooperation' procedure, which made the EP a real player in the Community's legislative process for the first time, thereby transforming Community decision-making, more especially because it was applied to the new harmonization procedure in what was Article 95 EC described below.[38] The EP was also given a veto over accession of new Member States and the conclusion of agreements with associate states.

The SEA made other institutional changes. It gave a legal basis to European Political Cooperation and formal recognition to the European Council, although not within the Community Treaties. A Court of First Instance (CFI) was created to assist the Court of Justice. Lastly, the so-called 'Comitology' procedure, under which the Council delegates powers to the Commission on certain conditions, was formally included within what was Article 202 EC.[39]

(B) SUBSTANTIVE CHANGES

The substantive changes made by the SEA were equally important. First, Article 18 EC set out the internal market aim of 'progressively establishing the internal market over a period expiring on 31 December 1992', and defined the internal market as 'an area without internal frontiers in which the free movement of goods, persons, services and capital is ensured'.

Secondly, qualified-majority voting by the Council was introduced into a range of areas which had previously provided for unanimity. Most important was the new Article 95 EC, which became the principal Treaty provision for the enactment of measures to complete the single market. This was

[37] COM(85)310.
[38] Ch 17.
[39] For further discussion of the committee procedures see Ch 4.

especially significant, since the unanimity requirement of Article 94 EC had been a serious obstacle to the passage of harmonization measures.[40]

Thirdly, the SEA added new substantive areas of Community competence, some of which had already been asserted by the institutions and supported by the Court, without any express Treaty basis. The additions covered cooperation in economic and monetary union, social policy, economic and social cohesion,[41] research and technological development, and environmental policy.[42]

(c) REACTION AND ASSESSMENT

The SEA represented the most important revision of the Treaties since they were first adopted, and heralded a revival of the Community momentum towards integration. The initial response to the SEA was nonetheless mixed. Some saw it as a positive step forward for the Community after a period of malaise. Others, such as Pescatore, formerly a judge on the ECJ, regarded it as a setback for the integration process.[43] Yet others stressed what was achieved under the SEA in combination with the Commission's White Paper.[44]

J Weiler, The Transformation of Europe[45]

Clearly, the new European Parliament and the Commission were far from thrilled with the new act.

And yet, with the hindsight of just three years, it has become clear that 1992 and the SEA do constitute an eruption of significant proportions. Some of the evidence is very transparent. First, for the first time since the very early years of the Community, if ever, the Commission plays the political role clearly intended for it by the Treaty of Rome. In stark contrast to its nature during the foundational period in the 1970s and early 1980s, the Commission in large measure both sets the Community agenda and acts as a power broker in the legislative process.

Second, the decisionmaking process takes much less time. Dossiers that would have languished and in some cases did languish in impotence for years in the Brussels corridors now emerge as legislation often in a matter of months.

For the first time, the interdependence of the policy areas at the new-found focal point of power in Brussels creates a dynamic resembling the almost forgotten predictions of neo-functionalist spillover. The ever-widening scope of the legislative and policy agenda of the Community manifests this dynamic.

The SEA thus helped to 'kick-start' fulfilment of the Community's economic objectives, more especially through the new Article 95 EC that became the vehicle for the Commission's programme for completion of the internal market. Moreover, while the SEA was characterized primarily by its 'single market' aims, and while the new provisions on regional policy, the environment, and research might be regarded as merely secondary or supportive, the reality was nonetheless that these changes created autonomous Community competence in these fields. This thereby served to reinforce the views of those who conceived of the single market project in terms of 'a true common marketplace, which,

[40] Ch 17.

[41] This policy concerned reducing the disparities between various parts of the EU.

[42] Various Community environmental measures were passed on the basis of Art 94 EC before the adoption of the SEA, and the Council had adopted Environmental Action Programmes since 1973.

[45] Weiler (n 29) 2454.

because of the inevitable connection between the social and the economic in modern political economies, would ultimately yield the much vaunted "ever closer union of the peoples of Europe"'.[46] The debate between those on different sides of the political spectrum, between a neo-liberal conception of the EU and the 'European social model', remains as lively today as ever.

6 MAASTRICHT TREATY

(A) THE THREE-PILLAR STRUCTURE

The momentum generated by the SEA continued after its adoption. The committee chaired by Jacques Delors on Economic and Monetary Union presented a report in 1989 setting out a three-stage plan for reaching EMU. The European Council held an intergovernmental conference (IGC) on the subject, and a second IGC on political union, apparently in order to balance economic integration with political integration.

On the basis of the IGC negotiations, a draft Treaty was presented by the Luxembourg presidency of the European Council in 1991. After various revisions, the Treaty on European Union (TEU) was eventually signed by the states in Maastricht in February 1992.[47] It was however rejected by Denmark in a referendum, but after several 'concessions' to the Danish Government a second referendum yielded a narrow majority in favour of ratification. When a challenge before the German Federal Supreme Court to the constitutionality of ratification was cleared,[48] the Treaty entered into force in November 1993.

The most striking feature of the TEU, apart from the detailed provisions on EMU, was the institutional change it brought about, establishing the 'three-pillar' structure for what was henceforth to be the European Union, with the Communities as the first of these pillars and the EEC Treaty being officially renamed the European Community (EC) Treaty.

There were originally seven titles in the TEU: Title I included the 'common provisions', which set out the basic objectives of the TEU. Titles II, III, and IV covered the First Pillar amendments to the EEC, ECSC, and Euratom Treaties respectively. Title V created the Second Pillar of the Common Foreign and Security Policy (CFSP), Title VI the Third Pillar of Justice and Home Affairs (JHA), and Title VII contained the final provisions.

The Amsterdam and Nice Treaties preserved this basic edifice, subject to certain amendments, but it has, as will be seen, been removed by the Lisbon Treaty. It is important nonetheless to understand the rationale for the three-pillar structure. The most important factor was that the Member States wished for some established mechanism through which they could cooperate in the areas of Common Foreign and Security Policy and Justice and Home Affairs. Setting up *ad hoc* meetings to discuss such matters is cumbersome, time-consuming, and involves heavy 'transaction costs', more especially as the number of players expands.

The Member States were however unwilling to subject these areas to the normal supranational methods of decision-making that characterized the Community Pillar, with all that this entailed for the central role of the Commission and ECJ. This was especially so, given that the Second and Third Pillars concerned sensitive areas of policy considered to be at the core of national sovereignty. The Member States therefore devised a decision-making structure that was more intergovernmental, in which they retained the primary reins of power, with the other Community institutions having either no role or one that was much reduced by way of comparison with the Community Pillar.

[48] Cases 2 BvR 2134/92 and 2159/92 *Brunner v The European Union Treaty* [1994] 1 CMLR 57, discussed in Ch 9.

(B) THE COMMON PROVISIONS

The TEU common provisions set out the basic principles of the newly created 'Union' and, although made expressly non-justiciable, they contained some high rhetoric on solidarity between states, closeness to the citizen, respect for national identities and for human rights, as well as a provision to safeguard the *acquis communautaire*—the established body of Community law.[49]

The objectives of the Union, which were to be achieved 'while respecting the principle of subsidiarity as defined in Article 3b' EC, included the promotion of 'balanced and sustainable' economic and social progress, through the creation of an area without internal frontiers, the strengthening of economic and social cohesion, and the establishment of EMU including a single currency. The Union's international identity was to be asserted 'through the implementation of a common foreign and security policy including the eventual framing of a common defence policy, which might in time lead to a common defence'. Citizenship of the Union was to be established and close cooperation on justice and home affairs was to be developed. These common provisions were not subject to the ECJ, although the Court cited several of these provisions, and some were rendered justiciable by the Amsterdam Treaty.

(C) CHANGES TO THE COMMUNITY TREATIES[50]

(i) *Institutional Changes*

The most significant institutional change made by the Maastricht Treaty was the increase in the Parliament's legislative involvement, by introducing the so-called co-decision procedure, what was Article 251 EC. This allowed the EP to block legislation of which it disapproved, if it was subject to this procedure.[51] The Parliament was also given the right to request the Commission to initiate legislation and the power to block the appointment of the new Commission.

There were other significant institutional changes. Article 7 EC placed the Court of Auditors on a footing equal to that of the other four institutions (Council, Commission, Parliament, and Court of Justice); Article 8 provided for both a European System of Central Banks (ESCB) and a European Central Bank (ECB); Article 195 EC made provision for a Parliamentary Ombudsman; and Article 263 EC established a 'Committee of the Regions'.

(ii) *Substantive Changes*

The Maastricht Treaty also made numerous substantive changes,[52] four of which were of particular significance. First, Article 5 EC established the principle of subsidiarity, which was intended to delineate the spheres in which action was best taken at Community level and national level. Secondly, a concept of European citizenship was introduced, Articles 17–21 EC. Thirdly, there were new provisions on economic and monetary union, Articles 98–124 EC, which laid the foundations for the introduction of the single currency.[53] Fourthly, further areas of competence were

[49] C Delcourt, 'The Acquis Communautaire: Has the Concept had its Day?' (2001) 38 CMLRev 829; Codification of the Acquis Communautaire, COM(2001)645.

[50] Fewer changes, principally some of the institutional amendments and the citizenship amendments, were made to the ECSC and Euratom Treaties.

[51] Ch 5.

[52] There were numerous protocols attached to the TEU. For criticism of some of the Protocols, 'tearing holes, of varying sizes, in the acquis communautaire veil', D Curtin, 'The Constitutional Structure of the Union: A Europe of Bits and Pieces' (1993) 30 CMLRev 17.

[53] J Pipkorn, 'Legal Arrangements in the Treaty of Maastricht for the Effectiveness of the Economic and Monetary Union' (1994) 31 CMLRev 263.

added and existing areas expanded, with new titles added to the Treaty in areas such as culture, public health, consumer protection, trans-European networks, and development cooperation, and significant modifications made in relation to the titles on, for example, the environment.

(D) COMMON FOREIGN AND SECURITY POLICY

The Second and Third Pillars created by the TEU remained apart from the Community institutional and legal structure, and were characterized by a more intergovernmental and less supranational decision-making structure. However, these Pillars were not entirely disconnected from the Community, since they involved the Community institutions and, in particular, the Council to a certain extent. The Lisbon Treaty removed the three-pillar structure, although the reality is that distinct rules still apply in the field of the CFSP. They are now found in Articles 21–45 TEU of the Lisbon Treaty, and will be examined below.[54]

(E) JUSTICE AND HOME AFFAIRS

The Justice and Home Affairs Pillar originally governed policies such as asylum, immigration, and 'third country' nationals, which were integrated into the EC Treaty by the Treaty of Amsterdam. However, prior to the Lisbon Treaty the Third Pillar also included cooperation on a range of international crime issues and various forms of judicial, customs, and police cooperation, including the establishment of a European Police Office (Europol) for exchanging information. The Lisbon Treaty has now brought the entirety of what was the Third Pillar into the general fabric of the Treaty[55] and the relevant provisions will be examined below.[56] The salient point for present purposes is that while the Third Pillar existed the decision-making process was more intergovernmental than under the Community Pillar. Decision-making was dominated by the Council, and the ECJ's powers were limited.

(F) REACTION AND ASSESSMENT

The TEU, like the SEA before it, was extensively analysed and criticized. The obscurity and secrecy of the negotiation processes, the complexity of the new 'Union' structure, the mixed bag of institutional reforms, the borrowing of Community institutions for the intergovernmental pillar policy-making, and the many opt-outs and exceptions (the 'variable geometry') attracted much critical comment. The perceived loss of unity and coherence of the Community legal order and the likely effect on the *acquis communautaire*, which had bound all Member States to the same body of legal rules and principles, is addressed in the following extract.

D Curtin, The Constitutional Structure of the Union: A Europe of Bits and Pieces[57]

The result of the Maastricht summit is an umbrella Union threatening to lead to constitutional chaos; the potential victims are the cohesiveness and the unity and the concomitant power of a legal system painstakingly constructed over the course of some 30 odd years. . . . And, of course, it does contain

[54] Ch 10; P Craig, *The Lisbon Treaty, Law, Politics and Treaty Reform* (Oxford University Press, 2010) ch 10.
[55] Arts 67–89 TFEU.
[56] Ch 25; Craig (n 54) ch 9.
[57] Curtin (n 52) 67.

some elements of real *progress* (co-decision and powers of control for the European Parliament, increased Community competences, sanctions against recalcitrant Member States, Community 'citizenship', EMU etc.) but a *process* of integration, if it has any meaning at all, implies that you can't take one step forward and two steps backwards at the same time. Built into the principle of an 'ever closer union among the peoples of Europe' is the notion that integration should only be one way.

It must be said, at the heart of all this chaos and fragmentation, the unique *sui generis* nature of the European Community, its true world-historical significance, is being destroyed. The whole future and credibility of the Communities as a cohesive legal unit which confers rights on individuals and which enters into their national legal systems as an integral part of those systems, is at stake.

It was evident with hindsight that the 'variable geometry', differentiation, or flexibility, which appeared in several forms in the Maastricht TEU[58] and which was perceived as undermining the cohesiveness and unity of the Community order, was not a temporary feature of European integration. The attraction of flexible or differentiated integration grew, and both the Amsterdam and Nice Treaties consolidated this trend in provisions on 'closer cooperation' and 'enhanced cooperation'.[59] The variety of labels describes a range of related ideas, including the possibility that some states may participate in certain policies while other do not, or that some will participate only partially, or possibly at a later date than others.[60] While the disadvantages of variable geometry may be a perceived lack of unity and increasing fragmentation (the dangers of '*à la carte*' integration), the advantages of providing a means for accommodating difference and reaching consensus in the face of strong divergence, for permitting progress in crucial areas such as EMU or foreign policy which might otherwise be deadlocked, are evidently considered sufficient to outweigh the former.[61]

(G) FURTHER ENLARGEMENT

The Acts of Accession of Norway, Austria, Sweden, and Finland to the European Union were signed at the European Council meeting in Corfu in 1994, but only the latter three acceded in 1995, because a referendum in Norway opposed accession.

On a related note, in 1991 an Agreement on the European Economic Area (EEA) between the EC and EFTA was made, providing for free-movement provisions similar to those in the EC Treaty, similar competition policy and rules, as well as 'close cooperation' in a range of other policy fields. The Agreement came into force at the beginning of 1994. The ECJ initially held that the first EEA Agreement was incom-

[58] Examples of differentiated integration introduced by the Maastricht Treaty were the UK's opt-out from what was then the Social Policy Chapter, the exemption from defence policy provisions of Member States which are neutral or were not full WEU members, and the option for the UK and Denmark to decide later whether or not to join in the arrangements for Economic and Monetary Union. For discussion of earlier such episodes in the Community's history see C-D Ehlermann, 'How Flexible is Community Law? An Unusual Approach to the Concept of "Two Speeds" ' (1984) 82 Mich LR 1274.

patible with the EC Treaty,[62] but after various amendments establishing an EFTA Court without any connection with the ECJ, the ECJ upheld its compatibility with the EC Treaty.[63]

7 TREATY OF AMSTERDAM

The aims of the 1996 IGC were more modest than those of the Maastricht Treaty, and the Amsterdam Treaty was declared to be about consolidation rather than extension of Community powers. The most important matter originally intended for the 1996 IGC agenda, preparing the Union for its enlargement eastwards, was however largely postponed until the Nice IGC. The Treaty of Amsterdam was signed in 1997 and came into effect on 1 May 1999. It deleted obsolete provisions from the EC Treaty, adapted others,[64] and renumbered all the Articles, titles, and sections of the TEU and the EC Treaty.

(A) COMMON PROVISIONS

The common provisions of the TEU were changed in a number of ways so as to enhance the EU's legitimacy. Thus, the principle of openness was added to Article 1 EU so that decisions were to be taken 'as openly as possible' and as closely as possible to the citizen. New objectives were listed in Article 2 TEU, including promotion of a high level of employment and the establishment of the area of 'freedom, security and justice'. Article 6 EU was changed to declare that the Union was founded on respect for human rights, democracy, and the rule of law, and respect for these principles was a condition for EU membership under Article 49 EU. Article 6(2) EU, which declared that the Union should respect the fundamental rights protected in the ECHR and in national constitutions, was rendered justiciable by Article 46 EU.[65] A new Article 7 EU provided that if the Council found a 'serious and persistent breach' by a Member State of principles set out in Article 6, it could suspend some of that state's rights under the Treaty.

(B) THE COMMUNITY PILLAR

In institutional terms, the most important change was the amendment and extension of the co-decision procedure, thus consolidating the EP in the decision-making process and virtually eliminating the cooperation procedure apart from provisions on EMU. The EP's power was further augmented by amendment to the procedure for appointing the Commission President in Article 214(2) EC, requiring Parliamentary assent. There were moreover changes designed to enhance the Community's legitimacy in relation to its citizens. Thus Article 255 EC embodied the principle of access to documents, while Article 286 EC dealt with data protection.

In substantive terms, the scope of Community power was further enhanced through the addition of new heads of competence, or the modification of existing heads,[66] and through Article 13 EC, which conferred legislative competence on the Community to combat discrimination based on sex, racial or ethnic origin, religion or belief, disability, age, or sexual orientation. The major structural change was the incorporation into the Community Pillar of a large part of the former Third Pillar

[62] *Opinion 1/91* [1991] ECR 6079.

[63] *Opinion 1/92* [1992] ECR I–2821; J Forman, 'The EEA Agreement Five Years On: Dynamic Homogeneity in Practice and its Implementation by the Two EEA Courts' (1999) 36 CMLRev 751.

[64] The General Secretariat of the Council issued an explanatory report on these provisions [1997] OJ C353/1.

[65] Ch 11.

[66] There was a new title on Employment, the provisions on Social Policy were modified, the title on public health was replaced and enhanced, and that on consumer protection was amended.

on the free movement of persons, covering visas, asylum, immigration, and judicial cooperation in civil matters.[67] The aim of this title and that of the amended Third Pillar was to establish 'an area of freedom, justice and security'.[68] A further substantive innovation was Article 11 EC, which provided that the Council could authorize 'closer cooperation' between Member States.

(c) COMMON FOREIGN AND SECURITY POLICY

A number of changes were made to the Second Pillar, although without greatly changing its structure or the nature of institutional involvement since the Maastricht Treaty: the EP's role did not alter, the ECJ remained excluded, and there was only a small change in the Commission's role permitting it to submit implementation proposals. There were however some changes. There had been criticism of lack of an international identity for the CFSP. The Union was not formally accorded legal personality by the Treaty of Amsterdam, but the Secretary-General of the Council was nominated as 'High Representative' for the CFSP to assist the Council Presidency, and Article 24 EU conferred power on the Council to 'conclude' international agreements,[69] whenever this was necessary in implementing the CFSP. There was also some clarification of the instruments used under the CFSP.

(d) POLICE AND JUDICIAL COOPERATION IN CRIMINAL MATTERS (PJCC)

A major criticism of the Maastricht Treaty was that many of the JHA policies were unsuited to the intergovernmental processes established. Immigration, asylum, border controls, and constraints on movement touched on fundamental human rights, and raised issues similar to those arising under the free movement provisions of the EC Treaty. Arguments for reform ranged from improving the institutional provisions under the existing JHA to absorbing the Third Pillar entirely into the Community Pillar. Predictably, what emerged lay between the two. The parts of JHA dealing with visas, asylum, immigration, and other aspects of free movement of persons were incorporated into EC Title IV. The remaining Third Pillar provisions were subjected to institutional controls closer to those under the Community Pillar, and the Third Pillar was renamed 'Police and Judicial Cooperation in Criminal Matters'.

The overall aim of the remodelled Third Pillar was to provide citizens with a high level of safety within an area of freedom, security, and justice, by developing 'common action' in three areas: police cooperation in criminal matters, judicial cooperation in criminal matters, and the prevention and combating of racism and xenophobia.[70] Particular targets mentioned were terrorism, drug and arms trafficking, trafficking in persons, and offences against children, corruption, and fraud. These objectives were to be pursued through legal instruments that were specific to the Third Pillar:[71] common positions, framework decisions, decisions, and conventions. The ECJ had jurisdiction over certain measures adopted under this Pillar,[72] thereby further eroding the distinction between the Community Pillar and the Third Pillar.

[67] Arts 61–69 EC.

[68] The *acquis* of the 1985 Schengen Treaty on the gradual abolition of common border checks was also integrated by a Protocol to the Treaty of Amsterdam into the EU framework.

[70] Art 29 EU.

[71] Art 34 EU.

[72] Art 35 EU.

(E) REACTION AND ASSESSMENT

Assessment requires a benchmark, some criterion against which to measure what was achieved against prior aspirations. The two most salient benchmarks were institutional reform to cope with prospective enlargement, and broader concerns about the EU's legitimacy. Viewed against these benchmarks, the Treaty of Amsterdam does not fare well. Institutional reform to cope with enlargement was not addressed, and there was relatively little to address broader concerns about the EU's legitimacy, although the extension of co-decision, the creation of the new Title IV EC, and provisions concerning access to documents, data protection, non-discrimination, and the like were beneficial in this respect.

The Treaty of Amsterdam nonetheless had a more general impact in two respects, although neither corresponded to the primary aspirations of those engaged on this round of Treaty reform. It eroded the distinction between the Pillars that had been crafted but four years earlier, especially in relation to the Third Pillar. It also constitutionalized and legitimated mechanisms for allowing different degrees of integration and cooperation between groups of states. Article 40 EU, Article 11 EC, and Title VII on closer cooperation demonstrated that differentiated integration should no longer be thought of as an aberration within the legal order.

8 NICE TREATY

(A) THE IGC

It is noteworthy that the EEC existed from 1957 until 1985 without a single IGC, and that by way of contrast since the SEA there was an almost continuous process of amendment.[73] The failure of the Treaty of Amsterdam to address the EU's institutional structure pending enlargement meant that a further IGC was inevitable, and it was called in 1999, only two months after the Treaty of Amsterdam entered into force, to address the composition of the Commission, the weighting of votes in the Council, and the extension of qualified-majority voting. The Nice Treaty was concluded in December 2000 after a notoriously fractious European Council summit.[74]

Despite its relatively modest agenda, the deeper legitimacy issues that surfaced during the Maastricht IGC could not be avoided when issues of institutional reform were on the table, particularly after the crisis provoked by the Commission's resignation in 1999. Thus questions of 'simplifying' the complex Treaty structure and establishing a basic constitutional text, of enhancing the EU's transparency and accountability, and of clarifying the EU's powers *vis-à-vis* the Member States were also discussed during this period.[75] There was moreover the beginning of a broader constitutional debate in the political sphere, stoked by the speech of Joschka Fischer in mid-2000 to Humboldt University.[76]

[73] B de Witte, 'The Closest Thing to a Constitutional Conversation in Europe: The Semi-Permanent Treaty Revision Process' in P Beaumont, C Lyons, and N Walker (eds), *Convergence and Divergence in European Public Law* (Hart, 2002) ch 3.

[75] Two special reports had also been requested and received by the Commission during this period—one on the *Institutional Implications of Enlargement* presented by a high-level group chaired by Jean-Luc Dehaene: see www.europa.eu.int/igc2000/repoct99_en.pdf, and the other a study prepared by the European University Institute at Florence on the reorganization of the Treaties, www.europa.eu.int/comm/archives/igc2000/offdoc/repoflo_en.pdf. See also A Basic Treaty for the European Union, COM(2000)434 and Adapting the Institutions to Make a Success of Enlargement, COM(2000)34. At the same time, the Commission was preparing its own White Paper on European Governance, COM(2001)428.

[76] Symposium: Responses to Joschka Fischer, www.iue.it/RSC/symposium/.

(B) THE COMMUNITY PILLAR

The Nice Treaty made a number of changes to the EC Treaty, in particular relating to the Community's institutional structure. The major political achievement was agreement on the issues relevant to enlargement: the weighting of votes in the Council, the distribution of seats in the European Parliament, and the composition of the Commission. The relevant Treaty provisions have been altered by the Lisbon Treaty, and will be analysed in subsequent chapters.[77] The EP's power was further enhanced by extension of the co-decision procedure to a considerable range of Treaty provisions.[78] The Nice Treaty also made changes to the Court system, in particular by strengthening the powers of the CFI.

(C) CFSP AND PJCC

The Nice Treaty made relatively modest changes to the Second and Third Pillars, dealing with the CFSP and PJCC respectively. The relevant rules in these areas have been superseded by the Lisbon Treaty, and will be explicated in later chapters.[79]

(D) ENHANCED COOPERATION

Article 43 EU allowed closer cooperation between certain Member States provided that certain conditions were met. The Article was modified by the Nice Treaty, the net effect being to relax a number of the conditions required before enhanced cooperation could be used. The relevant provisions were replaced by the Lisbon Treaty, and will be analysed in later discussion.[80]

(E) THE CHARTER OF RIGHTS

The Cologne European Council in 1999 launched an initiative of constitutional significance, in establishing a 'body' which included national parliamentarians, European parliamentarians, and national government representatives to draft a Charter of fundamental rights for the EU.[81] This body, which renamed itself a 'Convention', began work early in 2000 and drew up a Charter by the end of 2000. The Convention worked in an open way, and posted documents on a dedicated website. The Charter was 'solemnly proclaimed' by the Commission, European Parliament, and Council and received political approval of the Member States at the Nice European Council in December 2000,[82] but a decision on its legal status was placed on the so-called 'post-Nice agenda' and postponed until the 2004 IGC.

The Charter was a significant development. In substantive terms, despite criticisms of its content, the document was largely welcomed as a step forward for the legitimacy, identity, and human rights commitment of the EU. In terms of process, the mode by which it was drafted and adopted also attracted positive comment as an improvement on the method by which treaties had traditionally been negotiated. The decision to establish the Convention on the Future of Europe was, as we shall see, strongly influenced by the process that led to the Charter of Rights.

[81] G de Búrca, 'The Drafting of the EU Charter of Fundamental Rights' (2001) 26 ELRev 126.
[82] [2000] OJ C364/1.

(F) ENLARGEMENT

The driving force behind the Treaty of Nice was, as we have seen, to make the institutional changes necessary for further enlargement. This was especially pressing because the 2004 enlargement brought ten further states into the EU: the Czech Republic, Estonia, Cyprus, Latvia, Lithuania, Hungary, Malta, Poland, Slovenia, and Slovakia. Bulgaria and Romania joined the EU in 2007, making twenty-seven states in all. Negotiations are ongoing with Croatia and Turkey.

The policy of conditionality meant that candidate states were required to adapt their laws and institutions in significant ways before any date for accession was set, at a time when they had little or no influence on European laws and policies.[83] The requirement to comply with the 'Copenhagen criteria' set by the European Council in 1993, and to adopt the entirety of the Community *acquis*, was a considerable burden for these countries.

(G) REACTION AND ASSESSMENT

The aspirations underlying the Nice IGC were limited, the primary aim being institutional reform in the light of enlargement, a task left unresolved in the Treaty of Amsterdam. Viewed from this limited perspective the Treaty of Nice did the job. It produced answers on the key issues of Council voting, distribution of EP seats, and the size of the Commission, even if there was debate about whether those answers were 'optimal'. There was nonetheless a lingering dissatisfaction with the outcome.

This was in part procedural. There was much adverse media reaction to the ill-tempered exchanges and the late-night wrangling that accompanied the final stages of the IGC and the European Council meeting in Nice. This undoubtedly added to the pressure to reform the Treaty revision process, and formed part of the impetus for the European Council's decision in 2001 to establish a more open and representative Convention to prepare for the next IGC.

The lingering dissatisfaction was also in part substantive. The Nice Treaty may well have addressed the primary institutional issues, but it was readily apparent that there were equally important issues that were not touched. This was reflected in Declaration 23 on the Future of the Union appended to the Nice Treaty, which called for a 'deeper and wider debate about the future of the European Union', involving a broad range of opinion. The Declaration identified four issues for the 2004 IGC: the 'delimitation of powers' between the EU and the Member States, the status of the Charter of Fundamental Rights, simplification of the Treaties, and the role of the national parliaments. We shall see in the section that follows how discussion concerning these issues led to the Convention on the Future of Europe.

9 CONSTITUTIONAL TREATY

(A) FROM NICE TO LAEKEN

Declaration 23 appended to the Nice Treaty explicitly envisaged that the four issues would be considered further at the Laeken European Council meeting scheduled for December 2001. The nature of

subsequent reform was however transformed during 2001. A growing consensus emerged among the major institutional players about two crucial issues.[84]

In terms of the *content of the reform agenda*, it came to be accepted that the four issues left over from the Nice Treaty were not discrete. It was recognized that, for example, competences, and the status of the Charter, resonated with other issues concerning the institutional balance of power within the EU, and also with the vertical distribution of authority as between the EU and the Member States. The realization that the issues left over from Nice raised broader concerns coincided with a growing feeling that there should be a more fundamental re-thinking of the institutional and substantive fundamentals of the EU.

In terms of the *reform process*, it came to be accepted that if a broad range of issues was to be discussed, then the result, whatsoever it might be, should be legitimated by input from a broader 'constituency' than hitherto. This momentum was fuelled by dissatisfaction with the traditional process of Treaty reform, dominated by the paradigm of the IGC.

This emerging consensus was reflected in the Laeken European Council,[85] which gave formal approval, through the Laeken Declaration, to the broadening of the issues left open post-Nice. These four issues became the 'headings' within which a plethora of other questions were posed, concerning virtually every issue of importance for the EU. The Laeken Declaration also formally embraced the Convention model and established a Convention on the Future of Europe, with a composition designed to enhance the legitimacy of its results.

(B) CONVENTION ON THE FUTURE OF EUROPE

The Convention was composed of representatives from national governments, national parliaments, the EP, and the Commission. The accession countries were also represented. The Convention was chaired by Giscard d'Estaing, and there were two vice-chairmen, Giuliano Amato and Jean-Luc Dehaene. The executive role in the Convention was undertaken by the Praesidium, which was composed of the chairman, the two vice-chairmen, three representatives of national governments, two from the EP, two from the Commission, and two from national parliaments. The reports, papers, and draft Articles were available on the Convention's website.[86]

The Convention adopted a three-stage methodology. There was the 'listening stage' from March until June 2002, when the emphasis was on statements concerning the EU's mission. This was followed by the 'examination stage', in which Working Groups considered particular topics during the latter half of 2002.[87] There was then the 'proposal stage', in which the Convention discussed draft Articles of the Constitution, normally on the basis of proposals from the Working Groups. The Convention's three-stage methodology did not, however, apply to institutions and their respective powers, because it was felt that they were too contentious to be dealt with other than in plenary session, and the early months of 2003 were devoted to these issues.

It is nonetheless important to recognize that a Constitutional Treaty was not pre-ordained. The possibility of a constitutional text was mentioned only at the end of the Laeken Declaration, in the

[84] P Craig, 'Constitutional Process and Reform in the EU: Nice, Laeken, The Convention and the IGC' (2004) 10 EPL 653; Craig (n 54) ch 1.

[85] Laeken European Council, 14–15 December 2001.

[86] http://european-convention.eu.int.

[87] Working groups were established on: subsidiarity; Charter of Rights; legal personality; national parliaments; competence; economic governance; external action; defence; Treaty simplification; freedom, security and justice; and social Europe. The decision to create the first six groups was taken in May 2002; the remaining five groups were created later in Autumn 2002.

context of Treaty simplification, and the language was cautious.[88] Many Member States felt that the Convention might just be a talking shop which produced recommendations.[89] It was therefore something of a surprise when Giscard d'Estaing, in the Convention opening ceremony, announced that he sought consensus on a Constitutional Treaty for Europe.

The Convention, once established, developed its own institutional vision. The idea took hold that the Convention should indeed produce a coherent document in the form of a Constitutional Treaty. The defining 'Convention moment', when the idea that a Constitutional Treaty should be drafted by the Convention really took hold, was September 2002. A paper from the Secretariat concerned with Treaty simplification was central in this respect.[90] This laid the embryonic foundations for what was to become Part I of the Constitutional Treaty. Matters then moved rapidly. There was a plenary session on 12–13 September 2002, two days after the Report from the Secretariat.[91] Giscard d'Estaing drew together the pending reports from the Working Groups with the Secretariat paper, and stated that this made it possible for the Convention to 'reflect on the form of the end product, ie the draft Constitutional Treaty for Europe'.[92] A Preliminary Draft Constitutional Treaty[93] was duly presented in October 2002.

The Draft Treaty Establishing a Constitution for Europe was duly agreed by the Convention in June 2003 and submitted to the European Council in July.[94] The Constitutional Treaty was divided into four parts: Part I dealt with the basic objectives and values of the EU, fundamental rights, competences, forms of lawmaking, institutional division of power, and the like; Part II contained the Charter of Rights, which had been made binding by Part I; Part III concerned the policies and functions of the EU; and Part IV contained the final provisions.

(c) IGC AND (NON-)RATIFICATION

The Member States in the Laeken European Council were not, however, willing to give up entirely the 'normal' reins of power, and it was always envisaged that the Convention document would provide a 'starting point for discussions in the Intergovernmental Conference, which will take the ultimate decisions'.[95] The IGC amended some provisions in the Draft Treaty, but the Member States could nonetheless not agree on a final text in December 2003. The Presidency of the European Council passed to Ireland in 2004, and agreement on the Constitutional Treaty was secured at the European Council meeting in June 2004.[96]

It was still necessary for the Constitutional Treaty[97] to be ratified in accordance with the constitutional requirements or choices of each Member State. Fifteen Member States ratified the Treaty, but progress with ratification came to an abrupt halt when France and the Netherlands rejected the Constitutional Treaty in their referenda.[98] A number of Member States therefore postponed their ratification processes. The European Council in 2005 decided it was best for there to be a time for 'reflection'.

[88] 'The question ultimately arises as to whether this simplification and reorganisation might not lead in the long run to the adoption of a constitutional text in the Union', Laeken European Council (n 85) 24.

[98] R Dehousse, 'The Unmaking of a Constitution: Lessons from the European Referenda' (2006) 13 Constellations 151.

The Constitutional Treaty never 'recovered' from the negative votes in France and the Netherlands, and did not become law. However, the Lisbon Treaty, which has now been ratified, drew very heavily on the Constitutional Treaty and the great majority of the major changes in the Lisbon Treaty were taken over from the Constitutional Treaty without further debate.

(D) REACTION AND ASSESSMENT

There was considerable diversity of view on just about every facet of the Constitutional Treaty. The principal areas of debate were as follows.

There was discourse as to *whether it was wise for the EU ever to have embarked on this ambitious project*. This was reflected in the jibe 'if it ain't broke, why fix it?'. On this view, grand constitutional schemes of the kind embodied in the Constitutional Treaty were unnecessary, because the EU could function on the basis of the Nice Treaty, and dangerous, because the very construction of such a constitutional document brought to the fore contentious issues, which were best resolved through less formal mechanisms. There is force in this view. It should nonetheless be recognized that the four issues left over from the Nice Treaty were not discrete. They raised broader issues concerning the nature of the EU, its powers, mode of decision-making, and relationship with the Member States. The dissatisfaction with piecemeal IGC Treaty reform, monopolized by the Member States, should not, moreover, be forgotten. If this traditional process had been adhered to in relation to the broadened reform agenda there would have been criticism about the 'legitimacy and representativeness deficit' inherent in the classic IGC model.

A related, but distinct, set of issues concerned *the way in which the Convention operated*. Thus some cast doubt on the participatory credentials of the Convention, pointing to the increasing centralization of initiative in the Praesidium. This was problematic and did not conform to some 'ideal-type' vision of drafting a Constitution. The Convention did not however exist within an ideal-type world. It conducted its task against the real-world conditions laid down by the European Council. Once the European Council reaffirmed the deadline the Praesidium had little choice but to take a more proactive role, since otherwise the Constitutional Treaty would not have been presented to the European Council in June 2003.

A third area of debate concerned the *content of the Constitutional Treaty*. Some were critical about the further federalization they believed to result from the Treaty, focusing on, for example, the shift from unanimity to qualified-majority voting in the Council. Others were equally critical about what they saw as the increased intergovernmentalism in the Treaty, through, for example, enhanced Member State influence in the inter-institutional distribution of power, the creation of the long-term Presidency of the European Council, and the like. There were also significant differences of view concerning particular provisions of the Constitutional Treaty. Thus, for example, some applauded the distribution of competences, while others were critical, arguing that the provisions were unclear and uncertain.

10 LISBON TREATY

(A) IGC

The negative reaction to the Constitutional Treaty in France and the Netherlands generated academic debate as to what should happen to the 'constitutional' project.[99] The Member States were not, however,

[99] G de Búrca, 'The European Constitution Project after the Referenda' (2006) 13 Constellations 205; A Moravcsik, 'Europe without Illusions: A Category Error' (2005) 112 Prospect, available at www.prospectmagazine.co.uk/landing_page.php; A Duff, 'Plan B: How to Rescue the European Constitution', Notre Europe, Studies and Research No

willing to allow the work that had been put into the Constitutional Treaty to be lost. In 2006 the European Council commissioned Germany, which held the Presidency of the European Council in the first half of 2007, to report on the prospects for Treaty reform. The objective was to see whether an agreement could be brokered between the Member States that would pave the way for acceptance of some revised Treaty reform. The June 2007 European Council[100] then considered a detailed mandate of the changes that should be made to the Constitutional Treaty, in order that a revised Treaty could successfully be concluded.

This led to the birth of the Reform Treaty. The European Council concluded that 'after two years of uncertainty over the Union's treaty reform process, the time has come to resolve the issue and for the Union to move on'.[101] It was agreed to convene an IGC,[102] which was to carry out its work in accordance with the detailed mandate provided in Annex I to the conclusions of the European Council, and finish its deliberations by the end of 2007.[103] The Reform Treaty was to contain two principal substantive clauses, which amended respectively the TEU and the EC Treaty, the latter of which would be renamed the Treaty on the Functioning of the European Union, TFEU. The Union should have a single legal personality and the word 'Community' throughout would be replaced by the word 'Union'.[104]

There was also a conscious decision to excise the 'C' word, constitution, from the Reform Treaty. The European Council's reasoning was readily explicable in political terms: the imperative was to conclude this stage of Treaty reform, and insofar as the constitutional terminology of the Constitutional Treaty was felt to be a political obstacle then it was to be ditched. Thus the term 'constitution' was not to be used; the 'Union Minister for Foreign Affairs' was to be called High Representative of the Union for Foreign Affairs and Security Policy; the terms 'law' and 'framework law' were to be abandoned; there was to be no flag, anthem, or motto; and the clause in the Constitutional Treaty concerning the primacy of EU law was to be replaced by a declaration. The reality is nonetheless that insofar as the Constitutional Treaty partook of the nature of a constitution, none of the changes identified by the European Council were significant. A constitutional document does not cease to be so because the words law or lawmaking are not used, nor because of the change in nomenclature of the Union Minister for Foreign Affairs, nor for any of the other reasons listed. There is room for genuine debate as to whether the Constitutional Treaty was truly a constitutional document,[105] but insofar as it was the reasons for differentiation provided by the European Council were unconvincing.

Matters then moved rapidly. An Intergovernmental Conference was convened to take forward the Reform Treaty. Portugal held the Presidency of the European Council in the second half of 2007 and was keen that the matter should be concluded during its Presidency so that the new Treaty could bear its name. The 2007 IGC was power politics with a vengeance. We had grown accustomed to the fact that even traditional IGCs would be relatively open, with discussion papers available on the internet and time for the 'people' to form some view as to the planned reforms. This sense was fuelled by the more inclusive process used in relation to the Charter of Fundamental Rights and the Constitutional Treaty. The Lisbon Treaty was, by way of contrast, forged by the Member States and Community institutions, and there was scant time afforded for further deliberation.

The justification for this accelerated process was apparent when one perused the Lisbon Treaty, but it was, for obvious reasons, a justification that those engaged in the IGC could not too openly

acknowledge, this being that the Lisbon Treaty was indeed the same in most important respects as the Constitutional Treaty. The issues had been debated in detail in the Convention on the Future of Europe after a relatively open discourse, and were considered once again in the IGC in 2004. There was therefore little appetite for those engaged in the 2007 IGC to re-open Pandora's Box.[106] This argument could not however be pressed too explicitly by those taking part in the 2007 IGC, since they would be open to the criticism that they were largely re-packaging provisions that had been rejected by voters in two prominent Member States,[107] more especially given that key Member States sought to ratify the Lisbon Treaty without any further referendum.

The 2007 IGC produced a document that was signed by the Member States on 13 December 2007,[108] although the appellation was changed to the Lisbon Treaty in recognition of the place of signature. It required ratification by each Member State. The hope that this stage of Treaty reform could be hastily concluded was, however, dashed when Ireland rejected the Lisbon Treaty in a referendum. This obstacle was overcome by a second Irish referendum in October 2009, after concessions were made to Ireland. The final hurdle was the unwillingness of the Czech President to ratify the Lisbon Treaty, but he did so reluctantly after a constitutional challenge to the Treaty had been rejected by the Czech Constitutional Court. The Lisbon Treaty entered into force on 1 December 2009.

(B) FORMAL ARCHITECTURE

The Lisbon Treaty amends the Treaty on European Union and the Treaty Establishing the European Community. The Lisbon Treaty has seven Articles, of which Articles 1 and 2 are the most important, plus numerous Protocols and Declarations. Article 1 amends the Treaty on European Union, TEU, and contains some principles that govern the EU, as well as revised provisions concerning the Common Foreign and Security Policy and enhanced cooperation. Article 2 amends the EC Treaty, which is renamed the Treaty on the Functioning of the European Union. The EU is henceforth to be founded on the TEU and the TFEU, and the two Treaties have the same legal value.[109] The Union is to replace and succeed the EC.[110] A consolidated version of the Lisbon Treaty contains the new numbering and references to the old provisions where appropriate.[111]

(C) SUBSTANTIVE ARCHITECTURE: GENERAL

The Constitutional Treaty had a pretty clear 'constitutional architecture', with Part I containing the principles concerning the EU. The Lisbon Treaty fares less well in this respect. The revised TEU has some constitutional principles for the EU. This is especially true in relation to Title I–Common Provisions, Title II–Democratic Principles, and Title III–Provisions on the Institutions. There are nonetheless matters not included within the revised TEU, which had properly been in Part I of the Constitutional Treaty. Thus, for example, the rules concerning competence, aside from a brief men-

[106] G Tsebelis, 'Thinking about the Recent Past and Future of the EU' (2008) 46 JCMS 265.

[107] This was so regardless of the fact that the reasons for the no vote in France and the Netherlands may have had relatively little to do with the new provisions contained in the CT.

[108] Conference of the Representatives of the Governments of the Member States, Treaty of Lisbon Amending the Treaty on European Union and the Treaty Establishing the European Community, CIG 14/07, Brussels, 3 Dec 2007, [2007] OJ C306/1.

[109] Art 1 para 3 TEU.

[110] Art 1 para 3 TEU.

[111] Consolidated Versions of the Treaty on European Union and the Treaty on the Functioning of the European Union [2008] OJ C115/1, [2010] OJ C83/1.

tion in the TEU,[112] are to be found in the TFEU,[113] as are the provisions concerning the hierarchy of norms,[114] and those relating to budgetary planning.[115] The framers of the Lisbon Treaty had however to ensure that there was some difference to the 'naked eye' between what was contained in the revised TEU and what had been included within Part I of the Constitutional Treaty. They were therefore caught in a dilemma: the desire to frame the revised TEU to embrace the EU's important constitutional principles had to be tempered by the political need to produce a document that did not simply replicate Part I of the Constitutional Treaty.

The Lisbon Treaty did, however, improve the architecture of the TFEU. It is divided into seven Parts. Part One, entitled Principles, contains two Titles, the first of which deals with Categories of Competence, the second of which covers Provisions having General Application. Part Two deals with Discrimination and Citizenship of the Union. Part Three, which covers Policies and Internal Actions of the Union, is the largest Part of the TFEU with twenty-four Titles.[116] The most noteworthy change is that the provisions on Police and Judicial Cooperation in Criminal Matters, the Third Pillar of the old TEU, have been moved into the new TFEU. They have been integrated with what was Title IV EC, dealing with Visas, Asylum, etc, and is now Title V of the TFEU, renamed the Area of Freedom, Security and Justice. Part Four of the TFEU covers the Association of Overseas Countries and Territories. Part Five deals with EU External Action, bringing together subject matter with an external dimension.[117] Part Six is concerned with Institutional and Budgetary Provisions, while Part Seven covers General and Final Provisions.

(D) SUBSTANTIVE ARCHITECTURE: THE PILLAR STRUCTURE AND THE CFSP

The Lisbon Treaty is not built on the pillar system, but the distinctive rules relating to the Common Foreign and Security Policy, CFSP, mean that in reality there is still something akin to a separate 'Pillar' for such matters. The approach to the CFSP in the Lisbon Treaty largely replicates that in the Constitutional Treaty, subject to the change of nomenclature from Union Minister for Foreign Affairs to High Representative of the Union for Foreign Affairs and Security Policy. The rules relating to the CFSP remain distinct and executive authority continues to reside principally with the European Council and the Council.[118] The ECJ continues to be largely excluded from the CFSP.[119]

[112] Arts 4, 5 TEU.

[113] Arts 2–6 TFEU.

[114] Arts 288–292 TFEU.

[115] Art 312 TFEU.

[116] I–Internal Market; II–Free Movement of Goods; III–Agriculture and Fisheries; IV–Free Movement of Persons, Services and Capital; V–Area of Freedom, Security and Justice; VI–Transport; VII–Common Rules on Competition, Taxation and Approximation of Laws; VIII–Economic and Monetary Policy; IX–Employment; X–Social Policy; XI–The European Social Fund; XII–Education, Vocational Training, Youth and Sport; XIII–Culture; XIV–Public Health; XV–Consumer Protection; XVI–Trans-European Networks; XVII–Industry; XVIII–Economic, Social and Territorial Cohesion; XIX–Research and Technological Development and Space; XX–Environment; XXI–Energy; XXII–Tourism; XXIII–Civil Protection; XXIV–Administrative Cooperation.

[117] The principal issues covered by Part Five are: the common commercial policy, cooperation with third countries and humanitarian aid, restrictive measures, the making of international agreements, and the EU's relations with third countries and international organizations.

[118] Arts 22, 24 TEU.

[119] Art 24 TEU, Art 275 TFEU. It does however have jurisdiction in relation to Art 40 TEU, which is designed to ensure that exercise of CFSP powers does not impinge on the general competences of the EU, and vice versa; the ECJ also has jurisdiction under Art 275 TFEU to review the legality of decisions imposing restrictive measures on natural or legal persons adopted by the Council under Chapter 2 of Title V TEU.

(E) REACTION AND ASSESSMENT

It is important to keep separate the 'official' and the 'non-official' reaction to the ratification of the Lisbon Treaty, since different considerations were relevant in the two instances.

The most prominent 'official' reaction in the EU was one of relief that the Treaty reform had finally been concluded. Treaty reform had been on the agenda for almost a decade, since the conclusion of the Nice Treaty, Declaration 23 of which had been the catalyst for the next stage of Treaty revision, which led to Laeken, the Convention on the Future of Europe, the Constitutional Treaty, and the Lisbon Treaty. The failure of the Constitutional Treaty, more especially its rejection by two of the founding states, had taken its toll on the EU, sapping energy and morale. The prospect of failing twice was not therefore appealing. The prospect of re-opening the debates on the key issues was equally unappealing, more especially because many official players believed that the solutions in the Lisbon Treaty really were better than what had existed previously and/or that they were the best that could be attained in the real world of politics.

The 'non-official' reaction by academics, onlookers, EU observers, and the like was mixed, just as one might have expected. Indeed the very diversity of opinion that marked reaction to and assessment of the Constitutional Treaty, continued in relation to the Lisbon Treaty, primarily because the latter drew so heavily on the former. Thus debates as to whether it was wise to embark on 'general' Treaty reform, and discourse as to whether the content of the resulting Treaty was too 'federal' or too 'intergovernmental' continued in relation to the Lisbon Treaty, as did discussion of the desirability and impact of major changes, such as the creation of the long-term Presidency of the European Council. These issues will be assessed in more detail in later chapters of the book, when the changes made by the Lisbon Treaty are analysed in detail. It is only then that informed conclusions can be reached about the impact of the new Treaty.

11 CONCLUSIONS

i. Formal Treaty amendment has not been spread evenly over the EU's history. The period between the founding of the EEC and the SEA was relatively stable in this respect. The period since the SEA has been one of almost continuous Treaty revision, with the Maastricht, Amsterdam, and Nice Treaties coming in quick succession.

ii. Treaty reform is a continuation of politics by other means. The Lisbon Treaty represents the culmination of a decade of attempts at Treaty reform. It too is to be amended in a minor respect in relation to the provisions concerning Economic and Monetary Union, but subject to this change it is likely to constitute the basic Treaty regime for some time to come, more especially given the difficulty of securing agreement on Treaty amendment in an EU of twenty-seven Member States.

iii. The period since the inception of the EEC has seen very significant institutional and substantive changes to its powers.

iv. In institutional terms the European Parliament has moved from a player very much on the fringes of decision-making to become an institutional force in its own right, with a major role in the legislative process. The European Council has gone from strength to strength, beginning as an institution that existed outside the strict letter of the Treaties, to become a major institutional player, a position further reinforced by the Lisbon Treaty. Treaty amendments have also impacted on the powers and institutional dynamics of the Commission and Council.

v. In substantive terms the many complex Treaty changes should not mask the basic fact that each successive Treaty amendment has seen an increase in the areas over which the EU has competence. The time when the EU could be regarded as solely 'economic' in its focus, if it ever

truly existed, has long gone. The rationale for this will be explored in subsequent chapters. Suffice it to say the following. There is debate as to the relative importance of Member States and other players, such as the Commission, during the process of Treaty amendment. There is however no doubt that the Member States are central to the pace and direction of Treaty amendment, and that they have been willing to accord the EU competence over an increased range of areas.

THE INSTITUTIONS

1 CENTRAL ISSUES

i. There are seven principal institutions listed in Article 13 TEU entrusted with carrying out the tasks of the Union: the European Parliament, the European Council, the Council, the Commission, the Court of Justice of the European Union, the European Central Bank, and the Court of Auditors. This chapter will consider their respective roles and the way in which they interrelate. We shall also consider other important institutions such as the Economic and Social Committee, the Committee of the Regions, and agencies. The EU's monetary institutions will, however, be discussed later.[1]

ii. This chapter should not be approached with any preconceptions about the traditional division of governmental functions into categories of legislative, executive, administrative, and judicial. Many of these duties are shared between institutions, thereby rendering it impossible to describe any one of them as the sole legislator, or the sole executive. The EU does not therefore conform to any rigid separation-of-powers principle of the sort that has shaped certain domestic political systems.

iii. The pattern of institutional competence within the EU has not remained static. It has altered both as a consequence of subsequent Treaty revisions and as a result of change in the political balance of power between the institutions over time,[2] including through the emergence of a web of committees and institutional actors beyond the original 'canonical' institutions.

iv. The Lisbon Treaty has made a number of significant changes to the internal organization of the EU institutions and their respective powers. These changes were hotly debated in the Convention on the Future of Europe that produced the Constitutional Treaty.

v. The principal issues on which opinion was divided during the deliberations leading to the Constitutional Treaty were: the election of the Commission President; the size of the Commission; control over the Council; whether there should be a long-term head of the European Council, and if so the powers attached to this office; and the locus of responsibility for EU external relations, including the Common Foreign and Security Policy.

vi. The resolution of these issues in the Constitutional Treaty was largely taken over into the Lisbon Treaty. The discussion in this chapter will reveal the contending arguments on each of these issues and the likely impact of such changes for the functioning of the EU.

2 THE COMMISSION

It is important to understand that the term Commission connotes both the College of Commissioners and the permanent Brussels bureaucracy which staffs the Commission services.[3] The discussion begins with the former.

(A) PRESIDENT OF THE COMMISSION

The Presidency of the Commission is of real significance. The holder is clearly first among equals as compared with the other Commissioners, and the President's powers have increased over subsequent Treaty amendments.

The Lisbon Treaty now provides for the Commission President to be indirectly elected. The Commission had hitherto been opposed to this idea, fearing the politicization that might result. Its attitude changed during the deliberations in the Convention on the Future of Europe,[4] primarily because it was felt that this would enhance the legitimacy of the Commission President, thereby strengthening his claim to be President of the Union as a whole.[5] The European Parliament was unsurprisingly in favour of a regime in which it would elect the Commission President. The Member States were, however, unwilling to surrender all control over choice of Commission President to the European Parliament.

The 'solution' in the Constitutional Treaty[6] was carried over directly into the Lisbon Treaty. Thus Article 14(1) TEU duly states that the European Parliament shall elect the President of the Commission. The retention of state power is however apparent in Article 17(7) TEU. The European Council, acting by qualified majority, after appropriate consultation,[7] and taking account of the elections to the European Parliament, puts forward to the European Parliament the European Council's candidate for Presidency of the Commission. This candidate shall then be elected by the European Parliament by a majority of its members. If the candidate does not get the requisite majority support, then the European Council puts forward a new candidate within one month, following the same procedure.

The very fact that the Commission President is indirectly elected means that the 'candidate' must secure support of the dominant grouping within the European Parliament. This was nonetheless the reality even prior to the Lisbon Treaty, as exemplified by the fact that President Barroso was the official candidate of the European People's Party when he secured re-election in autumn 2009.[8]

It is for the Commission President to lay down guidelines for the working of the Commission, decide on its internal organization, and appoint Vice-Presidents of the Commission.[9] The responsibilities incumbent on the Commission are allocated among the Commissioners by the President,

who has power to reshuffle the portfolios,[10] but there will be negotiations, often intense, between the Commissioners, the President, and the Member States about 'who gets what'. The Commission President can moreover request the resignation of a Commissioner.[11]

The President plays an important role in shaping overall Commission policy, in negotiating with the Council and the Parliament, and in determining the future direction of the EU. How much is made of the post will depend on the personality and vision of the incumbent.[12] Jacques Delors had a strong vision for the Community's development. Many of the broader Community initiatives were in no small measure the result of his leadership within the Commission.[13]

(B) COLLEGE OF COMMISSIONERS

(i) *Size*

There had been considerable debate, going back at least to the Nice Treaty 2000, concerning the size of the Commission. In the IGC leading to the Nice Treaty opinion was divided as to whether there should continue to be one Commissioner from each state, or whether there should be an upper limit combined with rotation.[14] The argument for the latter view was that Commissioners do not represent their state, and that a Commission with twenty-seven Commissioners could cross the line between a collegiate body and a deliberative assembly.

The Lisbon Treaty, subject to the political caveat below, opted for the slimmed down Commission. It provides that the Commission will, until 31 October 2014, consist of one national from each Member State, including the President and the High Representative for Foreign Affairs.[15] After that date the Commission is to consist of members, including the President and the High Representative for Foreign Affairs, which correspond to two-thirds of the Member States,[16] unless the European Council, acting unanimously, decides to alter this number. Member States must be treated on a strictly equal footing as regards determination of the sequence of, and the time spent by, their nationals as members of the Commission. The composition of the Commission must reflect the demographic and geographical range of all the Member States.[17] This system is to be established by the European Council.[18] The basic position in the Lisbon Treaty is therefore that there will be a slimmed-down Commission in the medium term.

The 'political caveat' is however that the European Council can modify the post-2014 system by unanimously voting to alter the number of Commissioners.[19] The European Council could, for example, vote to retain one Commissioner per Member State post-2014, and it has made such a commitment as part of the deal struck with Ireland prior to its second referendum.[20] Thus assuming that the requisite unanimity is forthcoming in the European Council we shall see a continuation of the status quo, with one Commissioner per Member State. This would not however preclude the

European Council from later voting unanimously for the slimmed down Commission that is the default position established by Article 17(5) TEU.

(ii) *Appointment*

The Convention on the Future of Europe proposed that the President-elect of the Commission would choose Commissioners from a list of three names put forward by each Member State, and that these would be approved by the European Parliament.[21] This would have put the Commission President in the driving seat as to the choice of the Commissioners, subject to approval of the entire package by the European Parliament.

The Lisbon Treaty has, however, retained greater Member State influence over the choice of Commissioners. The regime is that Member States make suggestions for Commissioners, and the Council, by common accord with the President-elect of the Commission, adopts the list of those who are to be Commissioners. The body of Commissioners is then subject to a vote of approval by the European Parliament. However the formal appointment of the Commission is made by the European Council, acting by qualified majority, albeit on the basis of the approval given by the European Parliament.[22] Prospective Commissioners are commonly subject to scrutiny by the relevant parliamentary committee before approval by the European Parliament. Commissioners hold office for five years, and this term is renewable.[23]

The Commissioners must be chosen on grounds of general competence and their independence must not be in doubt. They must be completely independent in the performance of their duties, and can neither seek nor take instructions from a government or any other body.[24] Thus while Commissioners come from the Member States they do not represent their own state. The Commissioners meet collectively as the College of Commissioners. The Commission operates under the guidance of its President, and the Commissioners take decisions by majority vote.[25]

The Commissioners have their personal staffs (or cabinets), consisting partly of national and partly of EU officials.[26] There will be approximately fifteen officials in these teams, although the President of the Commission may have a larger cabinet. The members of the cabinet perform a variety of functions: they liaise with other parts of the Commission, scrutinize draft regulations and directives, and keep the Commissioner informed about developments in other connected areas. There have, however, been tensions between the cabinets and the Commission bureaucracy, with the former being regarded as representing national rather than EU interests.

(iii) *Removal*

An individual Commissioner can be compulsorily retired if the person no longer fulfils the conditions for performance of the job, or for serious misconduct. This decision is made by the ECJ on application by the Council.[27] The difficulty of removing Commissioners was part of the problem leading to the downfall of the Santer Commission. This is the rationale for the provision whereby a Commissioner shall resign if the President so requests.[28] There are also provisions for filling Commission vacancies in the event of resignation, compulsory retirement, or death.[29]

[28] Art 17(6) TEU.
[29] Art 246 TFEU.

(iv) *Decision-making*

The College of Commissioners operates in four different ways. Important matters are dealt with through meetings of the College, which occur weekly, normally on Wednesdays, and the agenda is prepared by the Secretariat-General.[30] These meetings will be preceded by discussion held by the Commissioners' *chefs de cabinet* to resolve differences in advance of the College meeting. There may also be meetings of Commission groups, designed to coordinate its activities.

The written procedure is used where 'deliberations in College do not seem to be necessary because all points have been agreed by the relevant DGs and approval has been given by the Legal Service'.[31] The proposal is sent to the Commissioners' cabinets, and if there is no objection within a specified period the decision is made. Any Commissioner can raise objections and request that the measure be considered at a College meeting.

A third mode of decision-making is empowerment, whereby the Commission empowers an individual Commissioner to make a decision, while respecting the principle of collective responsibility. There is finally the possibility of delegating decision-making to directors general and heads of service, who act on behalf of the Commission, which is used for routine business.[32]

(c) COMMISSION BUREAUCRACY

The permanent officials who work in the Commission, and who form the Brussels bureaucracy, are organized as follows. Directorates General (DG) cover the major internal areas over which the Commission has responsibility. There are now DGs for the following areas:[33] Agriculture and Rural Development; Climate Action; Competition; Economic and Financial Affairs; Education and Culture; Employment, Social Affairs and Equal Opportunities; Enterprise and Industry; Environment; Executive Agencies; Health and Consumers; Home Affairs; Information Society and Media; Internal Market and Services; Justice; Maritime Affairs and Fisheries; Mobility and Transport; Regional Policy; Research; and Taxation and Customs Union. There are DGs dealing with external relations, including: Development, Enlargement, EuropeAid-Cooperation Office, External Relations, Humanitarian Aid, and Trade. Financial matters are dealt with by the DGs for Budget and the Internal Audit Service.

There are also units which provide General Services across the spectrum of Commission activities. These include: the European Anti-Fraud Office (OLAF),[34] Eurostat, Communication, Publications Office, Translation Service, the Legal Service, Personnel and Administration, the Joint Research Centre, and the Secretariat-General of the Commission.

There are essentially four layers within the Commission bureaucracy.[35] There is the Commissioner who has the portfolio for that area. There is the Director General who is the head bureaucrat of a particular DG, with responsibility to the Commissioner. There are also Directors. A DG will have a number of Directorates, each of which will normally be headed by a Director who is responsible to the Director General. The final part of the administrative organization is the Head of Division or Unit. These Divisions or Units are parts of Directorates. Each Division or Unit will have a Head, who will be responsible to the relevant Director.

[33] http://ec.europa.eu/about/ds_en.htm.

[34] This office is still at present part of the Commission, although it has an individual independent status for its investigative functions and is significantly more independent than the anti-fraud unit which it replaced, http://ec.europa.eu/dgs/olaf/index_en.html.

[35] Nugent (n 3) 138–142; A Stevens with H Stevens, *Brussels Bureaucrats? The Administration of the European Union* (Palgrave, 2001) ch 8.

Decisions and draft legislative proposals will normally emanate from a lower part of this hierarchy, upwards towards the College of Commissioners. There will be detailed discussion of the legislative process later.[36] Suffice it to say for the present that a proposal will often originate within the relevant DG. Outside experts will often be used at this formative stage, and there will be consultation with national civil servants. The draft proposal will then pass up through the DGs to the cabinets of the relevant Commissioners, and on to the weekly meeting held by the *chefs de cabinet*. From there it will proceed to the College of Commissioners, which may accept it, reject it, or suggest amendments. Matters are more complex when a proposed measure affects more than one area, and hence more than one DG may be involved.

It is, moreover, not uncommon for the different DGs involved with a measure to have a 'different angle' on the problem. The term 'multi-organization' has been used to describe the priorities of different parts of the administration.[37] It is for this reason that consultations within the Commission will precede the meeting of the College of Commissioners. Formal meetings will be held by the *chefs de cabinet*, the object being to reach agreement before the College convenes. The meeting of the *chefs de cabinet* will receive input from discussion sessions held by the particular member of a cabinet who specializes in the relevant area. In addition there will be informal exchanges between opposite numbers within the bureaucracy at all levels, including the Commissioners themselves, members of differing cabinets, and officials who work in DGs with an interest in a measure. The Secretariat-General will also play an important role in coordinating the drafting of legislative initiatives within the Commission as a whole.

The basic principle within the Commission is for positions and promotions to be based upon merit, determined by competitive examination. This meritocratic principle is qualified by the fact that Member States will take a keen interest to ensure that their own nationals are properly represented, particularly in the senior posts. For this reason it has been traditional for an informal quota regime to operate in the allocation of such jobs.[38] Whether this can still survive is more doubtful, given that the Court has held that job allocation should not be predetermined and should be decided on merit.[39] We shall return to this issue when considering reform of the Commission.

There has been much carping over the years about the size of the Brussels bureaucracy. This is largely based on ignorance of the facts. In 2010 the Commission employed approximately 24,000 full-time officials, with a further 6,000 people on temporary contracts.

(D) POWERS OF THE COMMISSION

The powers of the Commission are set out in Article 17 TEU:

> 1. The Commission shall promote the general interest of the Union and take appropriate initiatives to that end. It shall ensure the application of the Treaties, and of measures adopted by the institutions pursuant to them. It shall oversee the application of Union law under the control of the Court of Justice of the European Union. It shall execute the budget and manage programmes. It shall exercise coordinating, executive and management functions, as laid down in the Treaties. With the exception of the common foreign and security policy, and other cases provided for in the Treaties, it shall ensure the Union's external representation. It shall initiate the Union's annual and multiannual programming with a view to achieving interinstitutional agreements.

[38] Nugent (n 3) 174–176.

[39] Case 105/75 *Giuffrida v Council* [1976] ECR 1395.

> 2. Union legislative acts may only be adopted on the basis of a Commission proposal, except where the Treaties provide otherwise. Other acts shall be adopted on the basis of a Commission proposal where the Treaties so provide.

The Treaty Articles have never been good at conveying the reality of the Commission's role. A 'bare' reading of Article 211 EC, the predecessor to Article 17 TEU, did little to convey the role played by the Commission. Article 17 TEU fares a little better in this respect, but still does not convey the full extent of the Commission's powers.

(i) *Legislative Power*

The Commission plays a central part in the legislative process, the details of which are discussed below.[40] The Commission is accorded the right of legislative initiative by Article 17(2) TEU, which places it in the forefront of policy development. Most proposals will have to be approved by the Council and the European Parliament, but the Commission's right of initiative has enabled it to act as a 'motor of integration' for the EU. The Council is, however, *de facto* the catalyst for many legislative initiatives.[41]

A second way in which the Commission impacts on the legislative process is that it develops the overall legislative plan for any single year.[42] The agenda-setting aspect of the Commission's work is significant in shaping the EU's priorities for the forthcoming year.[43] This role is both affirmed and qualified by Article 17(1) TEU, which is framed in terms of the Commission initiating the annual and multi-annual programme with a view to achieving inter-institutional agreement.

The Commission also affects EU policy in a third way, by developing general policy strategies. This is exemplified by the Commission's White Paper on the Completion of the Internal Market,[44] which shaped the Single European Act. Commission initiatives under the Presidency of Jacques Delors contributed to the development of Economic and Monetary Union. The Commission's Community Charter of the Fundamental Social Rights of Workers[45] (the Social Charter) was important in the debates about Community social policy. A further example is the Commission White Paper on European Governance.[46]

A fourth way in which the Commission exercises legislative power is through its capacity, in certain limited areas, to enact EU norms without the formal involvement of any other EU institution.[47]

Finally, the Commission exercises delegated power.[48] This is expressly contemplated by Article 290 TFEU. The Council and European Parliament delegate power to the Commission to make further regulations within particular areas.[49]

(ii) *Administrative Power*

The Commission has significant administrative responsibilities. This is reflected in Article 17(1) TEU, which states that the Commission shall manage programmes. Policies, once made, have to

[48] Ch 4 below.
[49] Chs 4, 5.

be administered. Legislation, once enacted, must be implemented. This will commonly be through shared administration, using national agencies.[50] The Commission will maintain a general supervisory overview, to ensure that the rules are properly applied within the Member States. There can be difficulties in executing this supervisory role successfully, as will be seen below.[51] It has also become increasingly common for the Commission to exercise direct administrative responsibility for the implementation of certain EU policy.[52]

(iii) *Executive Power*

The Commission possesses responsibilities of an executive nature. Two are of particular importance: those relating to finance and those concerning external relations.

The Commission plays an important role in the establishment of the EU's budget. It also has significant powers over expenditure, particularly in relation to agricultural support, which takes a substantial share of the Union's annual budget, and structural policy, which is designed to assist poorer regions to convert or adjust declining industries, and combat long-term unemployment.

The Commission also exercises executive powers in the sphere of external relations. Nugent explains.

N Nugent, The Government and Politics of the European Union[53]

First, the Commission is centrally involved in determining and conducting the EU's external trade relations … [T]he Commission represents and acts on behalf of the EU both in formal negotiations, such as those that are conducted under the auspices of the World Trade Organisation (WTO), and in the more informal and explanatory exchanges that are common between, for example, the EU and the USA over world agricultural trade, and between the EU and Japan over access to each other's markets.

Second, the Commission has important negotiating and managing responsibilities in respect of the various special external agreements that the EU has with many countries and groups of countries. …

Third, the Commission represents the EU at, and participates in the work of, a number of important international organizations …

Fourth, the Commission has responsibilities for acting as a key point of contact between the EU and non-member States. Over 160 countries have diplomatic missions accredited to the EU. … The EU, for its part, maintains an extensive network of diplomatic missions abroad, numbering over 130 delegations and offices, and these are staffed by Commission employees.

Fifth, … the Commission is entrusted with important responsibilities with regard to applications for EU membership. Upon receipt of an application the Council normally asks the Commission to carry out a detailed investigation of the implications and to submit an opinion. If and when negotiations begin, the Commission, operating within Council-approved guidelines, acts as the EU's main negotiator, except on showpiece ministerial occasions or when particularly sensitive or difficult matters call for an inter-ministerial resolution of differences. …

(iv) *Judicial Power*

The Commission possesses two kinds of judicial powers. The general foundation for such power is Article 17(1) TEU, which provides that the Commission shall ensure the application of the Treaties

[50] P Craig, *EU Administrative Law* (Oxford University Press, 2006) ch 3.
[51] See 39–40.
[52] Craig (n 50) ch 2.
[53] (Oxford University Press, 6th edn, 2006) 186–187.

and the law made pursuant thereto, and that it shall oversee the application of Union law under the control of the ECJ.

The Commission brings actions against Member States when they are in breach of EU law.[54] The actions will be brought under Article 258 TFEU and will assume the form of *Commission v UK* etc. Recourse to formal legal action will be a last resort and will be preceded by Commission efforts to resolve the matter through negotiation.

The Commission also acts in certain areas as investigator and initial judge of a Treaty violation, whether by private firms or by Member States. The two most important areas are competition policy and state aids. The Commission's decision will be reviewable by the General Court. Notwithstanding the existence of judicial review, the Commission's investigative and adjudicative powers provide it with a significant tool for the development of EU policy.

(E) DOWNFALL OF THE SANTER COMMISSION AND SUBSEQUENT REFORM

There had been concern for some considerable time about fraud and mismanagement, particularly in areas such as the Common Agricultural Policy.[55] This culminated in the setting up of a Committee of Independent Experts, under the auspices of the European Parliament and the Commission. The Committee produced its first report in March 1999,[56] the concluding paragraph of which stated that it was 'becoming difficult to find anyone who has even the slightest sense of responsibility' within the Commission.[57] The Report had an immediate, dramatic effect: the Commission resigned. The principal problem revealed by the Committee's Report was not fraud by the Commission. It was the difficulty of maintaining control over those to whom power had been contracted out,[58] which is an endemic problem for all systems of public administration.[59]

Romano Prodi took over as Commission President. He introduced a new Code of Conduct for Commissioners,[60] and set up the Task Force for Administrative Reform (TFRA). The TFRA produced a White Paper,[61] which was heavily influenced by valuable recommendations in the Second Report of the Committee of Independent Experts.[62] The general theme of the White Paper was the need for the Commission to concentrate on its core functions such as policy conception, political initiative, and enforcing EU law. Steps were to be taken to ensure greater linkage between priorities and resources. Activities would be delegated to other bodies, so as to enable the Commission to concentrate on its core activities.[63] 'Externalization' was to be used only where it was the most efficient option; it would not be used at the expense of accountability; and there would have to be sufficient internal resources to ensure proper control. There was to be a new type of implementing body, and there were recommendations about financial control.

The 2002 Financial Regulation adopted many of these ideas, providing a constitutional framework for much EU administration.[64] The idea that there should be a new breed of agency to oversee work contracted-out was accepted,[65] and a number of such agencies were created.[66]

(F) ROLE OF THE COMMISSION

The Commission has always been the political force most committed to integration.[67] It must perforce work with the Council and the European Parliament, and the pace of EU development has not always been steady because of this inter-institutional dimension.[68]

There is literature that sees the Commission's influence as in decline, as exemplified by its relatively low impact on the negotiations leading to the Treaty of Nice and the Constitutional Treaty.[69] A more positive picture has, however, been advanced by other writers, who focus on the continuing importance of the Commission bureaucracy.[70] The degree of power wielded by the Commission and the best way to explain the extent of Commission influence is therefore debated by political scientists. The following extract presents a spectrum of views.

J Peterson, The College of Commissioners[71]

If the Commission really was so weak, intergovernmentalist accounts of EU politics … could be marshalled to explain why. First, it makes little difference who is Commission President. Second, the Commission is only powerful when and where national preferences converge. Third, the Commission is only empowered to the extent that member governments want to ensure the 'credibility of their commitments to each other'. There is little dispute, among scholars as well as practitioners, that the Commission has traditionally had little influence over most 'history-making' decisions about the broad sweep of European integration.

In contrast, institutionalist theory, now firmly established as the 'leading theoretical approach in EU studies' … paints a portrait of the Commission that is often powerful in day-to-day policy debates … According to this view, policy decisions in complex systems such as the EU are difficult to reverse, and policy often becomes locked into existing paths and 'path dependent' … .

Some variants of institutionalism combine insights from rational choice and principal–agent theories … They hold that the principal authorities in EU politics—the member governments themselves—make rational choices to delegate tasks to the EU institutions, which then become their agents in specific policy areas. This body of theory sheds light on the tendency for the EU to make

policy by means other than the traditional 'Community method' of legislating, according to which only the Commission can propose . . .

Increased affinity for new policy modes is . . . reflected in the creation of new regulatory agencies . . . EU governments increasingly seem to want new kinds of agents—not just the Commission—to whom they can delegate cooperative policy tasks. Usually, however, the Commission retains the job of identifying and seeking to solve coordination problems within policy networks of . . . private actors, consumer and environmental groups, and national and European agencies.

Advocates of multi-level governance as an approach to understanding the EU have long contended that the Commission enjoys a privileged place at 'the hub of numerous highly specialized policy networks of technical experts' even retaining 'virtually a free hand in creating new networks' . . .

3 THE COUNCIL

(A) COMPOSITION

Article 16(2) TEU states that the Council shall consist of a representative of each Member State at ministerial level, who is authorized to commit the government of that state.[72] The members of the Council are, therefore, politicians as opposed to civil servants, but the politician can be a member of a regional government where this is appropriate. The Council meets when convened by the President of the Council on his or her own initiative, or at the request of one of its members, or at the request of the Commission.[73] Most Council meetings take place in Brussels, except for those taking place in April, June, and October, when they are held in Luxembourg. The meetings are more transparent than hitherto, as a result of changes introduced in June 2006.[74] The Lisbon Treaty now provides that Council meetings are divided into two parts, those dealing with legislative and non-legislative acts respectively. When a Council formation meets in its legislative capacity it must meet in public.[75]

Council meetings are arranged by subject matter with different ministers attending from the Member States, and are regulated by the Council's Rules of Procedure.[76] There are at present ten such Council configurations, having been reduced from the twenty-two that prevailed in the 1990s.[77] The General Affairs Council, GAC, deals with matters that affect more than one EU policy and also has the important job of preparing the agenda for the European Council. The Foreign Affairs Council is chaired by the High Representative for Foreign Affairs and Security Policy, and national foreign ministers will normally attend. It deals with external relations and matters relating to the Common, Foreign and Security Policy. The Economics and Finance Council (Ecofin), by way of contrast, is concerned with matters such as the budget, Economic and Monetary Union, and financial markets, and is attended by national finance ministers. There is a Council dealing with matters concerning Justice and Home Affairs.

The other Council configurations deal with sectoral issues: Transport, Telecommunications and Energy; Employment, Social Policy, Health and Consumer Affairs; Agriculture and Fisheries; Competitiveness; Environment; and Education, Youth, Culture and Sport. The ministers responsible

for these matters within the Member States will attend such meetings. They will be supported by their own delegations of national officials with expertise in the relevant area. The Commission attends Council meetings and has a particular role in relation to the GAC.[78]

(B) PRESIDENCY OF THE COUNCIL

There was considerable contestation in the debates that led to the Constitutional Treaty and Lisbon Treaty as to who should hold the Presidency of the Council.[79] The regime in the Lisbon Treaty is that the High Representative of the Union for Foreign Affairs presides over the Foreign Affairs Council, FAC.[80] The European Council decides by qualified majority on the list of other Council formations, and the Presidency of these formations.[81] The Presidency of Council formations other than the FAC must be in accord with the principle of equal rotation.[82]

A Draft Decision was included in the Lisbon Treaty, which embodies a 'team system' for the Presidency of Council formations other than the FAC.[83] The essence of this schema was that the Presidency of the Council, other than the FAC, was held by pre-established groups of three Member States for a period of eighteen months. The groups are made up on a basis of equal rotation among the Member States, taking into account their diversity and geographical balance within the Union. Each member of the group in turn chairs for a six-month period all Council configurations, except the FAC. The other members of the group assist the Chair in its responsibilities on the basis of a common programme. It is open to members of the team to decide on alternative arrangements among themselves.

The President will, seven months before taking office, set the dates for Council meetings in consultation with the Presidencies preceding and following its term of office.[84] Every eighteen months the three Presidencies due to hold office prepare, in consultation with the Commission, the High Representative, and the President of the European Council, a draft programme of Council activities for that period, which has to be endorsed by the General Affairs Council.[85] The incoming Presidency establishes, at least one week before taking office, indicative provisional agendas for Council meetings for the next six-month period, based on the eighteen-month programme and after consulting the Commission.[86] During the actual six-month tenure, the President sets the provisional agenda for each Council meeting, which must be sent to other Council members and the Commission at least fourteen days before the meeting.[87] The agenda is divided into legislative activities and non-legislative activities, and each part is further divided into Part A, covering matters that can be approved without discussion, and Part B dealing with those matters that require deliberation.[88] The provisional agenda is formally adopted at the Council meeting.[89]

[89] Ibid Art 3(7).

The position of President of the Council has assumed greater importance in recent years,[90] for a number of reasons.[91] Strong central management became more necessary to combat the centrifugal tendencies within the Council. The growing complexity of the EU's decision-making structure necessitated more coordination between the institutions. The scope of EU power increased, demanding greater leadership in the Council. The Council's wish to take a more proactive role in the development of EU policy required initiatives which the President could help to organize. Westlake and Galloway capture the importance of the position when they state that 'the Presidency is neither an institution nor a body, but a function and an office which has become vital to the good working of the Council'.[92] The President may develop policy initiatives within areas of concern either to the Council, or to the Member State that holds the Presidency.

While the Presidency therefore gives considerable power to the incumbent, the office is not without its stresses and pitfalls.[93] Presidencies must since 1989 draw up their programmes and present them to the Commission and the EP. Six months is a short time in which to get things done. The eyes of the other Member States will be focused, often critically, on the incumbent to determine the use to which the office has been put. If a country tries to use its Presidency to achieve goals that do not accord with majority sentiment in the Council and which are too narrowly nationalistic, then the criticism is likely to be particularly harsh.[94]

It should however be emphasized that the Presidency of the Council has altered in a significant respect post the Lisbon Treaty. This is because prior to the Lisbon Treaty the President of the Council also held the Chair of the European Council, the importance of which will be considered below. This is no longer so. There is a separate President of the European Council, who holds office for two-and-a-half years, renewable once.[95] The policy pursued by the country that holds the Presidency of the Council must therefore cohere with, or at the very least take into account, the more general strategy for the EU articulated by the President of the European Council. The need for synergy in this respect has been recognized by the institutional players.[96]

(c) COMMITTEE OF PERMANENT REPRESENTATIVES

The Lisbon Treaty provides that the work of the Council is to be prepared by the Committee of Permanent Representatives (Coreper), and that it shall carry out the tasks assigned to it by the Council.[97] Coreper is also empowered to adopt procedural decisions in cases provided for in the Council's rules of procedure. It does not, however, have the power to take formal substantive decisions,[98] but in practice Coreper 'has evolved into a veritable decision-making factory'.[99]

Coreper is staffed by senior national officials and operates at two levels. Coreper II is the more important and consists of permanent representatives who are of ambassadorial rank. It deals with the more contentious matters, such as economic and financial affairs, and external relations. It also performs an important liaison role with the national governments. Coreper I is composed of deputy permanent representatives and is responsible for issues such as the environment, social affairs, the internal market, and transport.

[98] Case C–25/94 *Commission v Council* [1996] ECR I–1469.

[99] J Lewis, 'National Interests, Coreper' in Peterson and Shackleton (n 70) ch 14.

Coreper plays an important part in EU decision-making,[100] because it considers draft legislative proposals that emanate from the Commission, and helps to set the agenda for Council meetings.[101] The agenda is divided into Parts A and B: the former includes those items which Coreper has agreed can be adopted by the Council without discussion; the latter covers topics which do require discussion. It has been estimated that approximately 70–80 per cent of all Council decisions prepared by Coreper and/or working groups are then taken formally through the Council as 'A' points.[102] Decision-making within Coreper tends to be consensual, even where the formal voting rules specify qualified majority,[103] and Lewis notes that 'from a Janus-faced perspective, they act as both, and simultaneously, state agents and supranational entrepreneurs'.[104]

A large number of working groups, approximately 150, feeds into Coreper. They are the lifeblood of the Council, and examine legislative proposals from the Commission. They are composed of national experts from the Member States or from the Permanent Representations. In addition to these working groups the Council receives input from specialist committees established under the Treaty and from committees created by EU legislation.[105] There can be 'turf battles' between Coreper and other preparatory bodies, such as the Political and Security Committee and the Economic and Finance Committee.[106]

(D) COUNCIL SECRETARIAT

In addition to Coreper the Council also has its own General Secretariat, under the responsibility of a Secretary-General, which provides direct administrative support to it.[107] The Secretariat has a staff of about 2,800, and of these roughly 250 are 'A' grade, diplomatic level. This body will furnish administrative service to the Council and also to Coreper and the working parties. It will prepare documentation, give legal advice, undertake translation, process decisions, and take part in the preparation of agendas. It will also work closely with the staff of the President of the Council, helping to smooth conflicts. The Secretary-General is an important figure and the Council Secretariat has become of increased importance over the years, especially in relation to EU Foreign and Defence Policy, Treaty negotiation,[108] and legal drafting.[109]

(E) POWERS OF THE COUNCIL

The Lisbon Treaty provides scant guidance as to the powers of the Council. Article 16(1) TEU merely provides that:

> The Council shall, jointly with the European Parliament, exercise legislative and budgetary functions. It shall carry out policy-making and coordinating functions as laid down in the Treaties.

[109] Christiansen (n 93) 164–167.

A simple reading of this provision does little to convey the reality of the Council's powers. The Council exercises an important role in the decision-making process in seven ways.

First and foremost, the Council has to vote its approval of virtually all Commission legislative initiatives before they become law. The vote will be by unanimity, qualified, or simple majority depending upon the particular Treaty Article, although it is deemed to act by qualified majority unless the Treaty stipulates to the contrary.[110] Moreover, the draft proposal from the Commission will be scrutinized by Coreper and the working parties.

Secondly, the Council has become more proactive in the legislative process through the use of Article 241 TFEU. This states that the Council may by simple majority request the Commission to undertake any studies which the Council considers desirable for the attainment of the common objectives, and to submit to it any appropriate proposals. If the Commission does not do so it must provide reasons. The Council has used this power to frame specific proposals that it wishes the Commission to shape into concrete legislation.[111] The Council has also used opinions and resolutions as a way of pressuring the Commission into generating legislative proposals.[112]

Thirdly, the Council can delegate power to the Commission, enabling the latter to pass further regulations within a particular area.[113] The Treaty rules relating to this topic have changed and will be analysed below.[114]

Fourthly, the increasing complexity of the EU's decision-making process has necessitated greater inter-institutional collaboration between the Commission, the Parliament, and the Council. This assumes various guises, from informal discussions concerning the shape of the legislative agenda to the use of Inter-institutional Agreements.[115]

Fifthly, the Council, together with the EP, plays a major role in relation to the EU's budget, on which many initiatives depend.

Sixthly, the Council concludes agreements on behalf of the EU with third states or international organizations.

Finally, the Council has significant powers in relation to the Common Foreign and Security Policy, CFSP. Thus, it will be the Council which takes the necessary decisions for defining and implementing the CFSP in the light of the guidelines of the European Council.[116] The Council has also played a major role in relation to the Area of Freedom, Security and Justice.

(F) ROLE OF THE COUNCIL

The Council represents national interests and always has. Whether the framers of the original Rome Treaty would have been surprised by the way in which the Commission and Council have interrelated since the inception of the Community is unclear. They hoped that the formation of the EEC would herald an era of greater collaboration in which sectional, national interests would diminish in relation to the collective interests of the Community as a whole. The original EEC decision-making structure certainly bore testimony to the central role accorded to the Commission, as is evident from the range of its powers. To be sure, the Council had to approve legislation, but the Commission was in the driving seat. This was because of the Commission's power to set the legislative agenda, because of its institutional resources for the development of Community policy, and because, while Council

[114] Ch 4.
[115] Ch 5.
[116] Arts 24–26 TEU.

consent was required for the passage of legislation, unanimity was required for Council amendments to Commission proposals.

It would be wrong to depict the Commission and the Council as perpetually at odds with each other throughout the Community's history.[117] But it would be equally mistaken to view the two institutions as coexisting in perfect harmony. There have been real tensions between the federal pro-integration perspective of the Commission, and the more cautious, intergovernmental perspective of the Council. The Treaty framers might have hoped that these tensions would be short-lived.[118] If this was so it was too optimistic a forecast. There have been institutional changes, often initially outside the letter of the Treaty, whereby the Council strengthened its position in relation to the Commission. This 'temporal' perspective on decision-making will be charted below.[119] Suffice it to say for the present that the development of a veto power in the Council, the importance of Coreper, the creation of committees to oversee power delegated to the Commission, and the evolution of the European Council all played a part in this process.

The balance of power within the EU is however dynamic, not static. The institutions' formal powers and the actual way they interrelate have altered across time. The SEA was the catalyst for a change of attitude by the Member States as represented in the Council. There was a growing recognition that the threat of the veto if a measure did not conform to a state's interests was too negative. The SEA also made the European Parliament a more active force in decision-making than it had been hitherto. These developments did not mean that relationships between the Council and the Commission, or for that matter between the Council and the Parliament, were always smooth. It did mean that the inter-institutional relationships changed. Thus, as Christiansen notes, 'the Council may not (yet) be a supranational institution in its own right, but it has certainly moved on from being purely a site of decision-making and the forum for bargaining among representatives of national governments for which it was originally conceived'.[120] The same point is echoed by Hayes-Renshaw, who states that despite the Council being the EU's intergovernmental institution *par excellence*, it is, in reality, 'a unique blend of the intergovernmental and the supranational'.[121] This conclusion is also evident in the following extract.

F Hayes-Renshaw and H Wallace, The Council of Ministers[122]

The Council remains the fulcrum of the decision-making, and legislative process of the EU. This reflects the stubborn determination of member governments in the EU to maximize their involvement in framing the decisions and shaping the legislation that would have a bearing on their polities … Yet, to view the importance of the Council as the victory of intergovernmentalism over supranationalism, or to expect the Council to be able to 'run' the EU, is to misunderstand the institutional constellation of the EU. The Council shares and diffuses power between countries, between different kinds of interests and constituencies, and between national and EU levels of governance. The Council cannot act alone, but is dependent on intricate relationships with other EU institutions. Since the mid-1990s, however these relationships have changed a good deal. The European Parliament (EP) has gained considerable power as co-legislator with the Council, the Commission has lost ground in what used to be the classic 'Council–Commission tandem', and the Council has gained a good deal more direct executive power in newer areas of EU collective policy-making. All these factors have made the Council both more interesting as an object of study and more diverse in its ways of operating.

4 THE EUROPEAN COUNCIL

(A) COMPOSITION

The European Council[123] has evolved over the years. Meetings of Heads of Government took place during the 1960s, but they were institutionalized in 1974 at the Paris summit. They continued to be held during the 1970s and 1980s, even though there was no formal remit in the Treaty until the Single European Act. The governing provision is now Article 15 TEU:

> 1. The European Council shall provide the Union with the necessary impetus for its development and shall define the general political directions and priorities thereof. It shall not exercise legislative functions.
> 2. The European Council shall consist of the Heads of State or Government of the Member States, together with its President and the President of the Commission. The High Representative of the Union for Foreign Affairs and Security Policy shall take part in its work.
> 3. The European Council shall meet twice every six months, convened by its President. When the agenda so requires, the members of the European Council may decide each to be assisted by a minister and, in the case of the President of the Commission, by a member of the Commission. When the situation so requires, the President shall convene a special meeting of the European Council.
> 4. Except where the Treaties provide otherwise, decisions of the European Council shall be taken by consensus.

Meetings of the European Council were in the past held in the country holding the Presidency of the Council, but are now normally held in Brussels. The European Council is mentioned on other occasions within the Lisbon Treaty. Thus, for example, it has a prominent role within the CFSP, and in the context of politically sensitive matters, such as coordination of the economic policies of the Member States.

(B) PRESIDENCY OF THE EUROPEAN COUNCIL

Prior to the Lisbon Treaty the Member State that held the Presidency of the Council also chaired the European Council for the same period. The single most divisive issue in the decade of Treaty reform concerned the locus of executive power in the EU and whether the pre-existing regime should be retained.[124] There were two main positions.

The prominent version of the 'single hat' view was that there should be one President for the Union; the office of President should be connected formally and substantively with the locus of executive power within the EU; and that the President of the Commission should hold this office. The Presidency of the European Council should continue to rotate on a six-monthly basis. The real 'head' of the Union would be the President of the Commission, whose legitimacy would be increased by election.

The prominent version of the 'separate hats' view was that there should be a President of the Commission and a President of the European Council, and that executive power would be exercised by both. The Presidency of the European Council would be strengthened, and would not rotate between Member States on a six-monthly basis. It was felt that this would not work within an enlarged EU, and

[123] S Bulmer and W Wessels, *The European Council* (Macmillan, 1987); P de Schoutheete and H Wallace, *The European Council* (Notre Europe, 2002), available at www.notre-europe.asso.fr; P Ludlow, *The Making of the New Europe: The European Council in Brussels and Copenhagen 2002* (EuroComment, 2004); P de Schoutheete, 'The European Council' in Peterson and Shackleton (n 70) ch 3; J Werts, *The European Council* (Harper, 2008).

[124] Craig (n 79) ch 3.

that greater continuity of policy would be required. This view was advocated by some larger states, but was opposed by some smaller states, which felt that the Presidency of the European Council would be dominated by the larger Member States.

The 'separate hats' view prevailed. The Lisbon Treaty, following the Constitutional Treaty, provided that the European Council should elect a President, by qualified majority, for two-and-a-half years, renewable once; that the European Council should define the general political directions and priorities of the EU; and gave the President of the European Council increased powers within the Council.[125] The first incumbent of the new position is Herman van Rompuy, who was previously the Belgian Prime Minister.

(c) RATIONALE

Member States' interests are already represented in the Council, and we must therefore press further to understand the rationale for the creation of the European Council. It was in part due to disagreements between the Member States themselves. These would normally be resolved through the Council, but if the disagreements were particularly severe on important issues, such as the budget, then resolution might be possible only by intervention at the highest level, through the Heads of Government themselves. The European Council was also due to the need for a focus of authority at the highest political level, in order that the general EU strategy could be planned, and that its response to broader world problems could be properly focused.

(d) ROLE

The relative paucity of Treaty references to the European Council should not lead one to doubt its importance. It plays a central role in shaping EU policy, establishing the parameters within which the other institutions operate. As Schoutheete states, 'management of the Union could not be assured without a top-level institution of this type: the European Council has played a fundamental role in European integration and will continue to do so'.[126] The issues commonly considered by the European Council can be grouped into the following categories.

The *European Council is central to the development of the Union*. Major changes in the Treaties will be preceded by an IGC. The catalyst for creation of an IGC will normally be a European Council meeting. The European Council will also affirm the consequential Treaty changes, as exemplified by the Nice European Council,[127] and it was central to debates about the Constitutional Treaty and the Lisbon Treaty.

The *European Council will normally confirm important changes in the institutional structure of the EU*. The final decision on the enlargement of the Parliament following German unification was taken by a summit of the European Council.

The *European Council can provide the focus for significant constitutional initiatives that affect the operation of the Union*. Inter-institutional Agreements between the three major institutions will often be made or finalized at a summit meeting. The Inter-institutional Agreement on Subsidiarity and the Declaration on Democracy, Transparency, and Subsidiarity were made at European Council meetings.

The *European Council will consider the state of the European economy as a whole*.[128] This is in part because Treaty provisions concerning closer economic union demand growing convergence between national economic policies. It is also because of the centrality of economic issues to the very health of

[125] Art 15(5)–(6) TEU.
[126] Schoutheete (n 123) 57.
[127] 8 Dec 2000.
[128] See, eg, Luxembourg Extraordinary European Council, 20 Nov 1997; Stockholm European Council, 24 Mar 2001.

the EU. Thus, the European Council frequently takes initiatives to combat unemployment, promote growth, and increase competitiveness, part of what is known as the Lisbon agenda.[129]

Conflict resolution is another issue addressed by the European Council. This was one of the rationales for its evolution, and continues to be important. For example, budgetary matters, 'who contributes how much, and who gets what financial benefits', continued to cause conflict between the Member States in the early 1980s, and then once again in the later 1980s.

The *European Council plays a role in the initiation/development of particular policy strategies*. Examples of this include the adoption of the Social Charter in 1989; policies aimed to combat problems concerning drugs and terrorism;[130] and the extension of the 'open method of coordination' to a range of social and economic policies.[131]

The *European Council is central in external relations*. It will, for example, consider important international negotiations, such as those with the World Trade Organization (WTO). It will be the European Council that issues declarations relating to more general international affairs, such as the civil war in what was Yugoslavia, or the conflicts in Lebanon and Iraq.

The *European Council will consider new accessions to the EU*. Thus, to take recent examples, the European Council affirmed that Bulgaria and Romania should be admitted to the EU in January 2007, and debated more generally the EU's approach to membership and enlargement.[132]

(E) ROLE OF THE EUROPEAN COUNCIL

The European Council is a classic example of change in the original institutional structure of the Treaty to accommodate political reality. It evolved from a series of *ad hoc* meetings outside the letter of the Treaty to a more structured pattern of summits. Treaty-recognition was originally accorded in the SEA and has been modified by later Treaty amendments.

The European Council is central to the EU's decision-making process. The reality is that no important developments internally or externally occur without having been considered by the European Council. The concluding resolutions do not have the force of law. They nonetheless provide the framework in which the other institutions consider specific policy issues. In the words of Westlake and Galloway, 'it is no exaggeration to say that, since 1975, most of the major political decisions of the European Community have been taken in the European Council'.[133]

The relations between the European Council and other EU institutions have evolved. The early European Council summits were viewed with suspicion by the Commission, since they were normally secret and the Commission was usually excluded. Matters are very different today. The European Council has been the institutional mechanism whereby the Commission can secure broad agreement from Member States for major initiatives.[134] The European Council's agenda is prepared by the General Affairs Council, GAC.[135] The Commission President is a member of the European Council, and many European Council initiatives are the result of Commission suggestions fed into the agenda prepared by the GAC. The President of the European Parliament has, since 1988, addressed a plenary session of the European Council.

The key issue in the post-Lisbon world will be the relationship between the President of the European Council, the President of the Commission, and the country that holds the Presidency of the Council

for a six-month period. The interplay between them will shape the policies and priorities of the EU. It has been argued by opponents of the Lisbon regime that this will lead to confusion and divided responsibility, and will increase intergovernmentalism and reduce the supranational dimension of the EU. The elevation of the President of the Commission to be the 'sole' President of the EU would however have generated very real tensions and problems. The reality is that executive authority in the EU has always been divided, and in that respect the Lisbon Treaty represents continuity with, rather than departure from, past practice. There are moreover reasons why the three institutional players should seek consensus, rather than conflict.[136]

5 HIGH REPRESENTATIVE OF THE UNION FOR FOREIGN AFFAIRS AND SECURITY POLICY

(A) POWERS

The High Representative of the Union for Foreign Affairs and Security Policy is not listed in Article 13 TEU and is therefore not an EU institution in the formal sense of the term. It is nonetheless an important position, which should be considered in this chapter.

There were debates in the Convention on the Future of Europe as to the changes that should be made concerning institutional responsibility for external relations.[137] The Constitutional Treaty created the post of EU Minister for Foreign Affairs, who was to 'conduct' the Union's common foreign and security policy.[138] The nomenclature changed in the Lisbon Treaty, because some Member States were unhappy about the 'statist' connotations of the title 'EU Minister for Foreign Affairs',[139] which was therefore altered in the Lisbon Treaty to be High Representative of the Union for Foreign Affairs and Security Policy.[140]

The substance of the provisions in the Lisbon Treaty is, however, the same as in the Constitutional Treaty. Thus the High Representative is appointed by the European Council by qualified majority, with the agreement of the Commission President.[141] The incumbent is one of the Vice-Presidents of the Commission, and is responsible for external relations and for coordinating other aspects of the Union's external action.[142] The High Representative conducts the EU's Common Foreign and Security Policy,[143] takes part in the work of the European Council,[144] chairs the Foreign Affairs Council,[145] and is also a Vice-President of the Commission. The High Representative therefore wears 'two hats', or perhaps three if one regards the role of chairing the Foreign Affairs Council as distinct from the other functions.

(B) ROLE OF THE HIGH REPRESENTATIVE

The idea that executive power within the Union is shared between the European Council and the Commission is personified in this post. It has been argued that the triple hats worn by the High Representative could lead to institutional schizophrenia, with the incumbent being subject to

conflicting loyalties.[146] There are also legal grounds for concluding that the institutional loyalty owed by the High Representative to the Commission is limited, and constrained by her responsibilities in the Foreign Affairs Council and the European Council.[147] We should not, however, too readily assume that the Commission will be weakened by the creation of the new post. The High Representative is Vice-President within the Commission, with responsibility for external relations. The lessons and ideas generated by this 'front-line' work will inevitably impact on the proposals contributed by the High Representative to the more strategic development of common foreign policy, as decided on by the European Council and fleshed out by the Foreign Affairs Council. This is of course a 'two-way street'. The influence will operate the other way, such that the overall strategic focus of the European Council will impact on the way the High Representative discharges her responsibilities in external relations within the Commission.

6 EUROPEAN PARLIAMENT

The story of the European Parliament is one of gradual transformation from a relatively powerless Assembly under the 1952 ECSC Treaty to the considerably strengthened institution it is today.[148] The history is considered in Chapter 1, and its role in the legislative processes is examined in Chapter 5. The Assembly was given few powers under the ECSC Treaty and under the original EEC and Euratom Treaties. It was intended to exercise consultative and supervisory powers, but not to play any substantial legislative role.

However, although the elite 'government of technocrats' established under the ECSC Treaty was not replicated in the EEC Treaty, the institutions set up by the latter were not a model of democratic organization. We saw in Chapter 1 how the influence of the Parliament grew, with the two budgetary treaties of 1970 and 1975, and after the transition to direct elections with the 'cooperation' and 'assent' procedures under the Single European Act 1986 and the 'co-decision' procedure under the Maastricht Treaty 1992,[149] which was strengthened and extended under the Amsterdam Treaty and the Nice Treaty.[150] The European Parliament now exercises substantial powers of a legislative, budgetary, and supervisory nature. While changes in the legislative process have enhanced the power of the only directly elected European institution, the problems of the EU's democratic legitimacy are not thereby resolved.[151] The 'demos' question is a complex one,[152] and the issue of democratic legitimacy will be considered below.[153]

(A) COMPOSITION AND FUNCTIONING

The Parliament sits in Strasbourg, but there is a secretariat based in Luxembourg and certain sessions and committee meetings take place in Brussels to facilitate contact with the Commission and Council.[154] Article 14(2) TEU states that:

> The European Parliament shall be composed of representatives of the Union's citizens. They shall not exceed seven hundred and fifty in number, plus the President. Representation of citizens shall be degressively proportional, with a minimum threshold of six members per Member State. No Member State shall be allocated more than ninety-six seats.
>
> The European Council shall adopt by unanimity, on the initiative of the European Parliament and with its consent, a decision establishing the composition of the European Parliament, respecting the principles referred to in the first subparagraph.

After much wrangling,[155] a Statute regulating important aspects of the rights and duties of MEPs was enacted in 2005.[156] The Statute took effect from the parliamentary term beginning in 2009 and deals with important matters of principle: MEPs shall be free and independent and agreements concerning the resignation from office of a MEP before the end of the parliamentary term are null and void; they shall be entitled to table proposals for EU acts; and can access the EP's files. The Statute also regulates practical matters relating to pay, insurance, and the like. The issue of pay has been of particular significance, since hitherto this was determined by national rates of pay, which differed markedly as between Member States.

The number of seats per country[157] ranges from ninety-nine for Germany to five for Malta.[158] The 'representativeness' of the European Parliament has nonetheless been criticized because the number of MEPs for each state is not proportionate to population size, and the smaller countries are disproportionately over-represented. A further cause for concern was that, despite holding direct elections since 1979,[159] the uniform electoral procedure originally envisaged was not created.[160] Article 223 TFEU requires the European Parliament to draw up a proposal concerning election of MEPs by direct universal suffrage in accordance with a uniform procedure in all Member States, or in accordance with principles common to all Member States.[161] This has not yet occurred, but there is a Decision specifying that MEPs are to be elected on the basis of proportional representation; that elections shall be by direct

[157] www.europarl.europa.eu/members/expert/groupAndCountry.do?language=EN.

[158] These figures will have to be adjusted to comply with Art 14(2) TEU, and see Protocol (No 36) On Transitional Provisions, Art 2. There is however indication that the EP may seek a minor Treaty amendment relating to its composition. For the present, the European Council has agreed transitional measures regarding the addition of extra seats until the end of the 2009–2014 term, Brussels European Council, 17 June 2010, [28].

[159] Dec 76/787 [1976] OJ L278/1.

[160] Corbett, Jacobs, and Shackleton (n 148) 14–16.

[161] Art 223 further provides that the Council, acting unanimously in accordance with a special legislative procedure and after obtaining the consent of the EP, which acts by a majority of its component Members, lays down the necessary provisions. The provisions then enter into force after approval by the Member States in accordance with their respective constitutional requirements.

universal suffrage; and that they shall be secret and free. Member States may set a threshold for the allocation of seats, provided it does not exceed 5 per cent of votes cast at national level.[162]

The Parliament's term is five years, like that of the Commission.[163] Following the Maastricht Treaty provisions on citizenship, citizens of the EU resident in any Member State gained the right to vote and to stand as candidates in European Parliament elections.[164] The turnout at EP elections has however been low,[165] which is worrying, given that the traditional EU discourse on democracy relies on the democratic legitimacy of the European Parliament. There is moreover significant disparity in voter turnout as between different Member States.[166]

MEPs sit according to political grouping, rather than nationality. There are currently seven political groups, the largest three being, respectively, the centre-right European People's Party (Christian Democrats and European Democrats) with 265 seats after the 2009 elections, the Party of European Socialists with 183, and the Group of the Alliance of Liberals and Democrats for Europe with eighty-five. The other parties are the Greens/Free Alliance with fifty-five MEPs, the European Conservatives and Reformists with fifty-four MEPs, the Confederal Group of the European United Left-Nordic Green Left with thirty-five, and the Europe of Freedom and Democracy Group with thirty. There were twenty-eight non-attached members.

Article 224 TFEU deals with European political parties. It provides that the European Parliament and Council acting in accordance with the ordinary legislative procedure shall lay down the regulations governing political parties at European level, and in particular the rules regarding their funding.[167] While the absence of properly constituted European-wide political parties has long been regretted by advocates of a genuine European political space, even this small step towards their establishment was not uncontentious.

The Parliament elects its own President, together with fourteen Vice-Presidents, for two-and-a-half-year terms,[168] and collectively they form the Bureau of Parliament.[169] The Bureau is the regulatory body responsible for the Parliament's budget and for administrative, organizational, and staff matters.[170] There are also five 'Quaestors', responsible for administrative and financial matters directly concerning members, who assist the Bureau in an advisory capacity.[171] The 'Conference of Presidents' consists of the President together with the leaders of the various political groups.[172] It is the political governing body of the Parliament. It draws up the agenda for plenary sessions, fixes the timetable for the work of parliamentary bodies, and establishes the terms of reference and size of parliamentary committees and delegations.[173]

The Parliament has twenty standing committees[174] on matters including foreign affairs; development; international trade; budgets; economic and monetary affairs; employment and social affairs; environment, public health and food safety; industry, research and energy; internal market and

consumer protection; transport and tourism; regional development; agriculture and rural development; fisheries; culture and education; legal affairs; civil liberties, justice and home affairs; constitutional affairs; women's rights and gender equality; petitions; human rights; and security and defence. Sub-committees and temporary committees or committees of inquiry can also be established. The Parliament is helped by a secretariat of approximately 3,500 staff, headed by a Secretary-General. The committees are vital to the EP, since they consider legislative proposals from the Commission.[175] They can also produce their own-initiative reports.[176]

Article 232 TFEU states that the Parliament is to adopt its own rules of procedure,[177] and Article 223(2) TFEU requires it to lay down the regulations and general conditions governing the performance of its Members' duties.

(B) POWERS

(i) *Legislative Power*

The legislative process will be considered below.[178] Suffice it to say for the present that the EP's role has strengthened over time. Prior to the Single European Act 1986 the general rule was that the EP only had a right to be consulted on legislation, and that was only where the particular Treaty Article so specified. The SEA introduced the cooperation procedure, which brought the EP into the legislative process more fully than hitherto. The co-decision procedure was introduced by the Maastricht Treaty, and in effect made the EP a co-equal partner, or something close thereto,[179] with the Council in the areas where it applied.[180]

It has been renamed the ordinary legislative procedure in the Lisbon Treaty[181] and its remit has been extended to approximately forty further areas. The co-equal status of the EP and Council is affirmed in Article 14(1) TEU, which now states that the EP shall, jointly with the Council, exercise legislative and budgetary functions. There are in addition certain areas where the assent of the EP is required for legislation. The EP now has a veto power over delegated acts,[182] but the reality of this new regime is uncertain, as will be seen below.[183]

The changes in the EP's role in the legislative process, most especially through what is now the ordinary legislative procedure, have brought it from the fringes of the EU to become a major player in the shaping of legislation. Its role has been further enhanced through regular meetings held by Council, Commission, and EP in inter-institutional conferences, and through the EP's greater contribution to the framing of the overall legislative agenda.

The EP made frequent use of litigation in order to defend its role in the legislative process,[184] and to contest the choice of legislative procedure used for a particular measure.[185] The ECJ held, after

[185] See, eg, Case C–22/96 *European Parliament v Council (Telephonic Networks)* [1998] ECR I–3231; Case C–42/97 *European Parliament v Council (Linguistic Diversity)* [1999] ECR I–869; H Cullen and A Charlesworth, 'Diplomacy by Other Means: The Use of Legal Basis Litigation as a Political Strategy by the European Parliament and Member States' (1999) 36 CMLRev 1243.

some hesitation,[186] that the EP could be a plaintiff in annulment proceedings, although only where its prerogatives had been infringed.[187] The Court also famously included the Parliament as a respondent in annulment proceedings even though only the Council and the Commission were mentioned under what was Article 173 EEC at that time.[188] The judicial developments were gradually incorporated into the relevant provisions of the Treaty following successive Treaty amendments. Thus, for example, the EP has full *locus standi* alongside the Commission, the Council, and the Member States to bring annulment proceedings.[189]

The EP's role in relation to the Common Foreign and Security Policy is smaller.[190] It is now the High Representative that is charged with consulting the European Parliament on the main aspects of the CFSP, and must take its views into account. The European Parliament can ask questions of the Council, and make recommendations to the Council and High Representative.

(ii) *Dismissal and Appointment Power*

The Commission's accountability to the Parliament has gradually been strengthened. The EP has always had the power to censure the Commission and require its resignation.[191] This power has never actually been used, though various motions of censure have been tabled, including during the period prior to the resignation of the Santer Commission in 1999.

Since the Maastricht Treaty the EP has also had the right to participate in the Commission's appointment. Article 14(1) TEU states that the EP shall elect the President of the Commission. This must, however, be read with Article 17(7) TEU, which provides for European Council influence over the candidate put before the EP. Thus the regime now is that the European Council, acting by qualified majority, taking into account the EP elections and after having held appropriate consultations, proposes to the EP a candidate for President of the Commission. The candidate is then elected by the EP by a majority of its component members. If the candidate does not obtain the required majority, the European Council, acting by a qualified majority, shall within one month propose a new candidate, who shall be elected by the European Parliament following the same procedure. The President, the nominated Commissioners, and the High Representative are subject to a vote of consent by the EP, but the formal appointment of the Commission is made by the European Council, acting by qualified majority.[192]

Thus while this regime does not give the EP the right to choose the Commission President on its own, the candidate will commonly have to be accepted by the largest group in the EP.[193] The EP committees will question nominated Commissioners about their designated area, and this has led to persons nominated as Commissioners being replaced.

In the case of members of the Court of Auditors, and the President, Vice-President, and Executive Board of the European Central Bank, the Parliament is to be consulted by the Council and the Member States, but its approval is not required.[194]

[194] Arts 283, 286 TFEU; M Westlake, 'The European Parliament's Emerging Powers of Appointment' (1998) 36 JCMS 431.

(iii) *Supervisory Power*

The EP monitors the activities of the other institutions, principally the Commission, through the asking of questions and the establishment of committees of inquiry. The longstanding practices permitting the setting-up of committees of inquiry and the right to petition the EP were given Treaty status at Maastricht, and are now provided for under Articles 226 and 227 TFEU.[195]

The Maastricht Treaty also provided for the appointment by the Parliament of an Ombudsman. The Ombudsman is to receive complaints from Union citizens or resident third-country nationals or legal persons, concerning 'instances of maladministration in the activities of Union institutions, bodies, offices or agencies'[196] as well as to 'conduct inquiries for which he finds grounds, either on his own initiative or on the basis of complaints submitted to him direct or through a member of the European Parliament'.[197] The Ombudsman is appointed for the duration of the Parliament, and in the case of serious misconduct or non-fulfillment of the conditions of the office the ECJ may, at the request of the EP, dismiss the office holder.[198]

The EU Courts acting in their judicial role are excluded from the Ombudsman's jurisdiction, and the Ombudsman cannot undertake an own-initiative inquiry in relation to facts that are subject to legal proceedings. However the major limitation on the Ombudsman's jurisdiction is that only EU and not national institutions are subject thereto.

The EU bodies which are subject to the Ombudsman's jurisdiction must supply information requested and give access to files, except where grounds of secrecy are pleaded. The Ombudsman is empowered under Article 228 TFEU to conduct own-initiative inquiries, as exemplified by the 1996 inquiry into public access to documents held by a number of Community institutions.[199] The Ombudsman sends a report to the Parliament and to the institution under investigation, and the complainant is informed of the outcome. The Ombudsman has also adopted a number of special reports following the responses of the institutions to his draft recommendation on a complaint, and has advised that his recommendations be adopted by Parliament as resolutions, or on occasion, such as in relation to the need for a Code of Good Administration, that an administrative regulation should be enacted.[200]

The Ombudsman has been a success and the office is increasingly seen as a source of administrative norms rather than simply a mediation facility for individual complaints.[201] Reference is made to the Ombudsman in Article 43 of the EU Charter of Fundamental Rights. The Ombudsman has referred frequently to the fundamental right to good administration contained in Article 41 of the Charter. The annual Reports from the Ombudsman contain a wealth of valuable information about the complaints received and their resolution.[202]

(iv) *Budgetary Power*

The EP also has important powers in relation to the budget. It used its power over the budget to pressure for more general changes in the inter-institutional allocation of power, and conflicts sometimes ended up in the Court.[203] The procedure for adoption of the budget is complex and is contained in Article 314 TFEU, which is a variant of the ordinary legislative procedure.

(c) ROLE OF THE EUROPEAN PARLIAMENT

The EP has undoubtedly become of greater importance in EU decision-making since the SEA. Its legislative, supervisory, and budgetary powers have increased, as have its power over the appointment of the Commission. The EP's influence has been most notable over primary legislation, and it has had less impact on either history-making decisions, such as Treaty revision, or policy-implementation, such as the passage of secondary rules made via Comitology.[204] The change in the EP's power is nonetheless marked.

R Corbett, F Jacobs and M Shackleton, The European Parliament[205]

> The European Parliament's role in the Community's legislative procedure has increased from having, initially, no role whatsoever, to having a consultative role, to being a co-legislator with the Council. Parliament has demonstrated its ability to initiate new legislation in areas of concern to the public, to force substantial amendments to major legislative proposals and to oblige the Council to review important elements of several of the common positions it has adopted.
>
> The European Parliament is not a sovereign Parliament in the sense of its word being final. On the other hand, it is not a Parliament whose powers are in practice exercised to legitimize a government's legislative wishes. It is an independent institution whose members are not bound to support a particular governing majority and which does not have a permanent majority coalition . . .
>
> The European Parliament is now a clearly identifiable part of an institutional triangle. This fact in itself is remarkable in historical terms. The term 'institutional triangle' was virtually unused two decades ago when most commentators referred to a bicephalous Community made up of the Commission and the Council. Now the argument is rather one about preserving and developing the equal status that the Parliament has won with regard to the other two institutions and of making European electorates aware of the contribution that the Parliament is increasingly making to the content of European laws affecting us all.

This leaves open the reason why the EP has been able to increase its power in this manner. Auel and Rittberger have proffered one explanation.[206] They argued that the driving force was the need to alleviate the legitimacy deficit. Input legitimacy connotes the idea that political choices are legitimate because they reflect the 'will of the people', which is normally identified through the legislature. Output legitimacy captures the idea that the political choices thus made effectively promote the welfare of that community.[207] Transfers of competence from Member States to the EU thereby created an asymmetry between input and output legitimacy, and hence a legitimacy deficit,

[203] See, eg, Case 34/86 *Council v European Parliament* [1986] ECR 2155; Case 377/87 *European Parliament v Council* [1988] ECR 4017; Case C–284/90 *Council v European Parliament* [1992] ECR I–2277.

[204] Shackleton (n 193) 113–118.

[205] Corbett, Jacobs, and Shackleton (n 148) 245.

[206] K Auel and B Rittberger, '*Fluctuant nec Merguntur*. The European Parliament, National Parliaments and European Integration' in Richardson (n 70) 125–129. The argument is developed in more detail in Rittberger (n 148).

[207] F Scharpf, *Governing in Europe, Effective and Democratic?* (Oxford University Press, 1999) 6–7.

since the normal mechanism for input legitimacy, through national parliaments, was reduced as increasing areas were regulated by the EU. One response was to foster closer involvement of national parliaments in EU decision-making.[208] Another response to this legitimacy deficit was to increase the power of the EP.

K Auel and B Rittberger, The European Parliament, National Parliaments and European Integration[209]

> [W]e argued that political elites have—since the SEA—gradually empowered the European Parliament's legislative powers and thus its capacity to influence European policy-making. Even though the decisions by member states to increase the legislative powers of the European Parliament were all but uncontroversial, the introduction and transfer of sectoral policy decisions to the European level triggered what we coined a democratic 'legitimacy deficit': European political elites came to perceive that the centralisation of policy-making tasks at the European level undermined the power of domestic parliaments to control and influence their respective governments in European policy-making. The legislative empowerment of the European Parliament was thus considered to serve as a mechanism to 'compensate' for domestic 'de-parliamentarisation'.

7 COURTS

Prior to the Lisbon Treaty the Community Courts comprised the Court of Justice (ECJ), the Court of First Instance (CFI), and judicial panels.[210] The nomenclature has been altered by the Lisbon Treaty. The term 'Court of Justice of the European Union' includes the ECJ, the General Court, the successor to the CFI, and specialized courts, the new name for judicial panels. Article 19(1) TEU provides that:

> The Court of Justice of the European Union shall include the Court of Justice, the General Court and specialised courts. It shall ensure that in the interpretation and application of the Treaties the law is observed.

(A) EUROPEAN COURT OF JUSTICE

Article 19(1) TEU states that there shall be one judge per Member State. They are appointed 'by common accord of the Governments of the Member States',[211] after consultation with a panel that reports on the suitability of the person to perform the function of an ECJ judge.[212] Judges and Advocates General of the ECJ must be chosen from persons whose independence is beyond doubt, who possess the qualifications required for appointment to the highest judicial offices in their respective countries, or are jurisconsults of recognized competence.[213] The term of office is six years, but the judge can be reappointed. The appointments are staggered, so that there will be a partial replacement

of judges every three years.[214] The Court elects its President from amongst its own judges and appoints its Registrar.[215]

The ECJ is assisted by eight Advocates General, and that number can be raised by unanimous decision of the Council.[216] The qualifications for selection, method of appointment, and conditions of office of the Advocate General (AG) are the same as for the ECJ judges. The AG's duty is principally 'to make, in open court, reasoned submissions on cases': Article 252 TFEU. An Opinion of the AG is not required in every case.[217]

Certain Member States have appointed academics as ECJ judges, whereas others, such as the UK and Ireland, have nominated advocates or existing domestic judges. A judge or AG who, in the unanimous opinion of the other judges and Advocates General, no longer fulfils the conditions and obligations of office may be removed.[218] Judges may not hold any other political or administrative office while members of the Court and, apart from their normal replacement, their period of office may terminate on death, resignation, or on removal from office.[219]

The ECJ may sit as a full Court, a 'Grand Chamber', or in Chambers, in accordance with rules laid down by the Statute.[220] It sits as a full Court either where the case is regarded as exceptionally important, or where the subject matter warrants, such as an action for dismissal of the Ombudsman or a Commissioner.[221] The Grand Chamber consists of thirteen judges and is used when a Member State or an institution that is party to the proceedings so requests, and in particularly complex or important cases.[222] The great majority of cases are heard in Chambers of three or five judges,[223] which is vital to the Court's functioning, given its increasing case-load.

The ECJ's jurisdiction is specified in the Treaties, and many of the heads of jurisdiction will be considered within subsequent chapters. Suffice it to say for the present that the main provisions governing its jurisdiction are Article 19 TEU and Articles 251–281 TFEU. International agreements between Member States may also confer jurisdiction on the ECJ.

(B) GENERAL COURT

The Court of First Instance (CFI)[224] was established in 1988 pursuant to the Single European Act.[225] Initially the CFI had a derivative institutional status, and was described in the EC Treaty as being 'attached to the Court of Justice'. This was altered by the Nice Treaty, and the Lisbon Treaty, as we have seen, now provides that the Court of Justice of the European Union shall include the General Court, the new name for the CFI, and accords it responsibility within the sphere of its jurisdiction for the task of ensuring that the law is observed in the interpretation and application of the Treaty.[226]

The General Court comprises 'at least' one judge per Member State, thus distinguishing it from the ECJ.[227] There are no separate Advocates General on the General Court, although a judge may be

[227] Art 19(2) TEU.

called upon to perform the task of an AG.[228] The members of the General Court shall be chosen from 'persons whose independence is beyond doubt and who possess the ability required for appointment to high judicial office'.[229] They are appointed by common accord of the Member States for six years renewable,[230] after consultation with the judicial panel that advises on judicial appointments.[231] The General Court elects its own President from amongst its judges, and appoints its Registrar.[232] It sits in Chambers of three and five judges, or sometimes as a single judge,[233] and approximately 75 per cent of cases are heard by Chambers of three judges. It may also sit as a Grand Chamber or full Court when the complexity or importance of the case demands it.[234]

There is an appeal to the ECJ within two months from the General Court's decision.[235] The appeal is limited to questions of law, and this covers 'lack of competence of the General Court, a breach of procedure before it which adversely affects the interests of the appellant as well as the infringement of Union law by the General Court'.[236]

The rationale for the creation of the General Court was to relieve the burden on the ECJ. It was initially given jurisdiction over staff cases, competition cases brought by individuals against the Community institutions, and certain cases under the ECSC Treaty. Gradually the Council transferred to it other categories of cases. The General Court's jurisdiction is now determined by Article 256 TFEU. This will be examined in detail later. Suffice it to say for the present that the General Court has jurisdiction over most, although not all, direct actions.[237] Direct enforcement actions against Member States under Articles 258 and 259 TFEU remain, however, under the jurisdiction of the ECJ, although this can be changed through amendment of the Statute. The General Court can hear actions against decisions of specialized courts, and the General Court's rulings can be reviewed by the ECJ only in exceptional circumstances, 'where there is a serious risk of the unity or consistency of Union law being affected'.[238]

Indirect actions begin in national courts, which seek a preliminary ruling from the ECJ on EU law pursuant to Article 267 TFEU. The national court then decides the case in the light of that ruling. Prior to the Nice Treaty such cases were the preserve of the ECJ. The Nice Treaty changed this and the schema has been carried over to the Lisbon Treaty. Thus the General Court can be empowered to decide on preliminary rulings under Article 267 TFEU 'in specific areas laid down by the Statute',[239] subject to certain controls by the ECJ. The Nice IGC specified in Declarations 12 and 13 that attention should be given as soon as possible to the delineation of such areas, but there has nonetheless been no move to make this a reality by specifying the areas in which the General Court would have power over preliminary rulings.[240]

(c) SPECIALIZED COURTS

The establishment of specialized courts, hitherto judicial panels, is governed by Article 257 TFEU. The principal rationale for this development, which dates from the Nice Treaty, was to ease the

[240] Ch 13.

workload of the ECJ and General Court. The proposal to create a system of decentralized or regional Community courts was not taken up,[241] but the creation of a third jurisdictional level below the ECJ and the General Court was the most significant structural reform of the EU judicial system since the establishment of the General Court. A European Union Civil Service Tribunal has been created to adjudicate on staff cases.[242]

Article 257 TFEU stipulates that the European Parliament and the Council, acting via the ordinary legislative procedure, may establish specialized courts attached to the General Court to hear at first instance certain classes of action in specific areas. The European Parliament and the Council act either on a proposal from the Commission after consultation with the Court of Justice, or at the request of the Court of Justice after consultation with the Commission. Decisions given by specialized courts are normally subject to appeal only on law, subject to the caveat that there can be appeal on fact if the regulation establishing a particular specialized court so provides. The members of the specialized courts are chosen from persons whose independence is beyond doubt and who possess the ability required for appointment to judicial office. They are appointed by the Council, acting unanimously.

(D) REFORM OF THE COURT SYSTEM

Reform of the EU Court system was long-awaited and oft-proposed, but reactions to the Nice Treaty amendments to the 'judicial architecture' were rather muted.

JHH Weiler, The Judicial Après-Nice[243]

> The actual outcome of the Conference in this area too, as with the political institutions, is an inability to break away from the scheme of the original Treaties. At the core of this architecture, and its most important feature by any perspective one may care to adopt, is the Preliminary Reference and the Preliminary Ruling. This procedure has remained substantially unchanged for half a century. A Court of First Instance with new-found dignity, Judicial Panels and all the rest notwithstanding, Europe continues to drive in its rusty and trusted 1950 model with the steering wheel firmly in the hands of the Court of Justice.
>
> Put differently, the IGC was not willing to engage in either profound rethinking or profound re-engineering of the judicial function in view of a much changed polity to the one in which the current system was set. . . . And yet the context in which the judicial system is situated has changed radically in the last fifty years. The increase of size from six Member States to a potential of twenty-six is really only part of the problem, and possibly not even the most important part. Not a limited jurisdiction over some technical areas but a complex polity with jurisdiction ranging from human rights to monetary policy to difficult aspects of immigration and even citizenship. . . . And then the Court itself: no longer an instance for dispute settlement, but a judicial giant which has successfully positioned itself at the constitutional centre of Europe, a Europe in which national legal orders suddenly feel under threat.

Space precludes detailed elaboration of the changes that might be made to the EU's judicial architecture, although this will be examined in part when discussing preliminary rulings.[244] Suffice

[244] Ch 13.

it to say for the present that overhaul of the judicial architecture, and the division of jurisdiction between the ECJ and General Court for both direct and indirect actions, would be desirable.[245] The Constitutional Treaty and the Lisbon Treaty had less impact on the EU Courts than on the other institutions. The Courts' role within the new constitutional scheme was considered only relatively late in the Convention proceedings, when a Discussion Circle was set up and it worked under severe time constraints. There was little consideration given to the general division of jurisdiction between the ECJ, CFI, and national courts and the Discussion Circle focused on a number of more discrete legal issues. The overall judicial architecture in the Constitutional Treaty and Lisbon Treaty therefore largely replicated the existing Treaties.[246]

(E) ADVOCATE GENERAL

The ECJ's decision-making is assisted by the office of AG. The AG is a full member of the Court and participates at the oral stage of the judicial hearing. The AG's most important task is to produce a written opinion, the 'reasoned submissions' mentioned in Article 252 TFEU, for the Court. This opinion is produced before the Court makes its decision. An AG does not have to be involved in every case and the Statute determines when this is required.[247]

The written opinion sets out the AG's view of the law, and recommends how the case should be decided. This opinion does not bind the Court, but is very influential, and is often followed by the ECJ. The AG's opinion is intended to constitute impartial and independent advice, and in practice it tends to be a comprehensive, reasoned account of the law governing all aspects of the case. It will often shed light on an ECJ judgment that is difficult to interpret.

(F) PROCEDURE BEFORE THE COURT

Procedure before the ECJ and General Court is governed by their respective rules of procedure.[248] The procedure before the ECJ takes place in two stages, the written and the oral stages.[249] The written part of the proceedings before the ECJ is normally more important than the oral. At the written stage, all applications, statements of case, defences, and any submissions or relevant documents are communicated to the parties and institutions whose decisions are being contested. The oral stage, by contrast, is limited and short. The *juge-rapporteur*, the judge assigned in a given case, prepares and presents to the Court the 'report for the hearing', which summarizes the facts of the case and the arguments of the parties. The legal representatives may make oral submissions to the Court, which can question them. This has become an important part of the oral proceedings, since it clarifies the issues which the Court considers of significance in the case.

While there is an appeal from judicial panels to the General Court and appeals on points of law from the General Court to the ECJ, there is no further appeal from the judgments of the ECJ. However, Member States, EU institutions, and parties may under certain conditions contest a judgment delivered without their being heard, where it is prejudicial to their rights.[250] There is also a mechanism

[245] P Craig, *EU Administrative Law* (Oxford University Press, 2006) ch 9.

[246] Craig (n 79) ch 4.

[247] Statute (n 217) Art 20 provides that where the ECJ 'considers that the case raises no new point of law, the Court may decide, after hearing the Advocate-General, that the case shall be determined without a submission from the Advocate-General'.

[249] Statute (n 217) Art 20.

[250] Ibid Art 42.

whereby any party with an interest in a particular judgment may apply to the Court to construe its meaning where this is in doubt,[251] and revision of a judgment within ten years of its being given can be sought 'on discovery of a fact which is of such nature as to be a decisive factor' and which was unknown at the time the judgment was given.[252]

The Court, while generally building on its case law, does not consider itself bound by a strict system of precedent.[253] The ECJ may explain the rationale for departure from prior case law, but will not always indicate the cases that have been 'overruled'.[254]

(G) STYLE OF THE COURT'S JUDGMENTS

The style of the ECJ's judgments stands in contrast with the AG's opinions. The ECJ's and General Court's judgments are collegiate, representing the single ruling of all judges hearing the case. There are no dissents or separately concurring judgments, and therefore divergent judicial views may be contained within the judgment. This can result in a ruling that is ambiguous on matters of importance. Further difficulties can arise because of the multiplicity of languages used before the Court. Moreover, while the AG's opinion generally considers exhaustively all the legal arguments potentially relevant to the case, the Court may prefer not to commit itself on a specific legal issue until another case arises where it is directly necessary for a decision.

(H) ROLE OF THE COURT

The ECJ has, as noted above, various heads of jurisdiction. Its contribution to EU law has moreover been shaped through use of Article 19(1) TEU, which provides that it 'shall ensure that in the interpretation and application of the Treaties the law is observed'. This provision now applies to all EU Courts, but it has been the ECJ which has made principal use of it. It will be seen in subsequent chapters how the Court utilized this provision to extend review to cover bodies which were not expressly subject to it[255] and measures which were not listed in the Treaty.[256] In the name of preserving 'the rule of law' the Court has developed principles of a constitutional nature as part of EU law, which bind the EU institutions and Member States when they act within the sphere of EU law.[257] It is the ECJ, as interpreter of the Treaties, which adjudicates on the limits of EU competence as against the Member States.[258]

It has moreover been the ECJ that fashioned seminal principles of the EU legal order, such as direct effect, supremacy, and state liability in damages. These principles have defined the very nature of the EU, constitutionalizing it and distinguishing it from other international Treaties. They were especially significant in the years of so-called institutional malaise or stagnation. The Court rendered the Treaty and EC legislation effective when the provisions had not been implemented as required by the political institutions and the Member States.[259] This was exemplified by the ECJ's role in the creation of the internal market, requiring removal of national trade barriers, at a time when

[259] Ch 7.

progress towards completing the Single Market through legislative harmonization was hindered by institutional inaction.[260]

It is therefore important to view the ECJ's role from a dynamic, rather than static, perspective. It was suggested, after the revival of the political processes of integration leading to the SEA, that the Court should thereafter adopt a 'minimalist' role.[261] The reality is that the ECJ has not been a consistently 'activist' court at all times or in all policy spheres. It may, for example, simultaneously create new methods of enforcement,[262] while reducing its intervention in an area where the legislative institutions have become more active. The Court is moreover aware of the political environment in which it acts and its judgments are at times influenced by relatively 'non-legal' arguments made by Member States, relating to the financial impact of a ruling, or by critical responses from the public or from national and Union sources.[263]

The Court's jurisprudence cannot be properly understood without an awareness of its approach to interpretation. This is generally described as purposive or teleological, although not in the sense of seeking the precise purpose of the authors of a text.[264] The fact that the *travaux préparatoires* to the original Treaties were never published meant these were not used as a source, and this is reflected in the Court's case law.[265] In the case of secondary legislation declarations and extracts from the minutes have occasionally been relied on as aids to interpretation before the Court.[266] However in most cases it has denied the relevance of this material if it does not appear in the text of the legislation.[267]

The ECJ's teleological or purposive approach is not therefore narrowly historical. The Court rather examines the whole context in which a particular provision is situated, and gives the interpretation most likely to further what the Court considers that provision sought to achieve. This may not be the literal interpretation of the Treaty, or of the legislation, and may not comport with the express language. This aspect of the Court's methodology has attracted criticism, although it has been defended robustly by members of the academic community, by its former personnel, and by some practitioners.

The best known of the Court's early critics was Rasmussen. His thesis was that the Court sought 'inspiration in guidelines which are essentially political of nature and hence, not judicially applicable. This is the root of judicial activism which may be a usurpation of power.'[268] He did not criticize all 'activism', but rather that which he believed to have lost popular legitimacy. There were mixed reactions to Rasmussen's work from an academic community that had largely been supportive of the Court's strategy.[269] Thus Cappelletti argued that Rasmussen's critique lacked an historical dimension,

that any constitutional court should have the courage to enforce its 'higher law' against temporary pressures, and that the ECJ's vision 'far from being arbitrary, is fully legitimate, for it is rooted in the text, most particularly in the Preamble and the first Articles of the EEC Treaty'.[270]

A further attack on the Court came from Sir Patrick Neill, in his 'case study in judicial activism', in which he argued that the Court was a dangerous institution, skewed by its own policy considerations and driven by an elite mission.[271] Advocate General Fennelly however pointed out that the Member States through Treaty revisions have either explicitly or implicitly approved many Court decisions.[272] Advocate General Jacobs, in defence of the Court's 'constitutional' role, argued that it plays an essential role in preserving the balance between the Union and the Member States, and in developing constitutional principles of judicial review.

F Jacobs, Is the Court of Justice of the European Communities a Constitutional Court?[273]

> If then, the Court sometimes performs the task of a Constitutional Court, and if it has developed constitutional principles in its case law, we can understand why, in some quarters, the Court's activities have been misunderstood. The Court has sometimes been criticized as a 'political' Court. Such criticisms are probably based on unfamiliarity with the very notion of constitutional jurisprudence, which, as we have seen, is not familiar in all the Member States, and which requires what may seem novel judicial techniques, different approaches to interpretation, even a different conception of the law. Yet, in the Community system, which is based on the notion of a division of powers, some form of constitutional adjudication is inescapable, if indeed the Community is to be based, as its founders intended, on the rule of law.

It is true that all constitutional courts must engage with political issues, but, given the unaccountability of courts, the nature and origin of the 'unwritten' values which they promote should be critically scrutinized, as should the extent to which their decisions seem to depart from what their express powers would appear to allow. It is equally important for such judicial decision-making to be fully reasoned.[274]

The ECJ has overall pursued a policy of legal integration, giving substance to an 'outline' Treaty, thereby enhancing the effectiveness of EU law and promoting its integration into national legal systems. While excessive concentration on the Court should be avoided,[275] its role as an institutional actor in the integration process should be recognized. The nature of this role has been considered by political scientists as well as lawyers.

For liberal intergovernmentalists the central message is that states are the driving forces behind integration, that supranational actors are there largely at their behest, and that such actors have little independent impact on the pace of integration.[276] The supranational institutions are viewed as agents for the Member States, who accord power to such institutions for their own self-interest. Thus the ECJ's powers are rationalized on the ground that the existence of proper adjudicatory mechanisms at the supranational level can prevent prisoner dilemma and free rider problems, thereby removing the possibility that the system will be undermined by states seeking to reap the rewards of membership while trying to avoid their obligations.[277]

The idea that the ECJ can be regarded as an agent of the Member States, with little if any independent impact on integration, will be questioned by lawyers, even if they disagree as to the nature of this impact. It would, to take but one prominent example, be difficult to rationalize the jurisprudence on citizenship in simple principal–agent terms, given that the ECJ's expansive interpretation of the relevant Treaty Articles was often given in the face of fierce opposition from the Member States.[278] It is moreover clear that political scientists who have studied the Court often disagree with liberal intergovernmentalism. Thus Stone Sweet argues against the view that the Court can be regarded as some perfect agent for Member State governments, and contends that ECJ decisions often produce 'unintended consequences' not readily foreseen by those who designed the EC.[279] In the following extract he adverts to the constitutionalization of the EU, through doctrines developed by the ECJ, such as direct effect, supremacy, and pre-emption.

A Stone Sweet, The Judicial Construction of Europe[280]

There are a number of reasons why the constitutionalization of the Rome Treaty generated an expansive logic of its own, entailing an increasing demand for law, rule clarification, and capacities for monitoring and enforcement. From the beginning the central mission of the EC was to create the conditions for the development of the Common Market. Yet impersonal exchange, across jurisdictional boundaries, is problematic for reasons that social scientists have explored at length … As elsewhere, the success of integration has depended heavily on the extent to which the EC could develop effective organizational capacities: to guarantee property rights, to enforce competition rules, to adjudicate legal claims, to build a European framework for regulating market activities, and so on. At the very least constitutionalization accelerated this process. In my view, one can go further: the ECJ authoritatively reconstituted the Community in ways that linked the demand for and supply of European law and courts to the activities of market actors, and then to all activities governed by EC law. Constitutionalization not only positioned the courts as primary arenas for negative integration; it made them supervisors of positive integration, and creators of a growing corpus of rights which the Court found in the Treaty itself.

… With constitutionalization, the national courts too, developed into privileged sites for deliberation and rulemaking, not least because they are charged with supervising the transposition and implementation of EC law by national authorities … .

8 THE COURT OF AUDITORS

The Court of Auditors was established by the second Budgetary Treaty of 1975, and came into operation in 1977, replacing the previously existing Auditor of the ECSC and the Audit Board of the Communities. Since the enactment of the Maastricht Treaty, the Court of Auditors has had the status of a Community, now Union, institution. It is governed by Articles 285–287 TFEU.

The Court of Auditors consists of one national from each Member State, appointed by the Council by qualified majority after consulting the Parliament, which has actively exercised its right of consultation. The term of office is for six years, renewable, and appointments are staggered. The auditors must belong or have belonged in their country to an external audit body, or they must be 'especially qualified for this office',[281] and their independence must be beyond doubt.[282] The conditions of office are strict: members may not engage in any other occupation, paid or unpaid, and even after leaving office they must behave with integrity and discretion as regards the acceptance of certain appointments or benefits.[283] A member of the Court of Auditors can be removed from office only by decision of the ECJ.

The Court of Auditors scrutinizes EU finances and ensures sound financial management. The Court examines the revenue and expenditure of the Union and of EU bodies, offices, and agencies, except where this is precluded by the relevant constituent instrument.[284] The Parliament and the Council are provided by the Court of Auditors with a statement of assurance as to the reliability of the accounts and the legality of transactions and irregularities are to be reported. The annual statement of assurance may be supplemented by sectoral assessments on major areas of EU activity.[285] The Court's audit is based on records, but it can also, if necessary, be carried out on the spot in the EU institutions, bodies, agencies, etc and in the Member States, in liaison with the competent national audit body.[286] The Court of Auditors has *locus standi* to bring annulment actions under Article 263 TFEU, similar to that given to the European Central Bank.

The Court of Auditors draws up an annual report, which is adopted by a majority of its members, after the close of each financial year.[287] The report is sent to the other EU institutions and published in the Official Journal together with the replies of the institutions. The Court of Auditors may submit observations on specific questions, or adopt special reports.[288] It can also deliver opinions at the request of another institution, as when it is consulted on legislative proposals.[289]

The Court's reports have often been extremely critical. It has been noted that it is sometimes difficult to show that the Court of Auditors and the Commission are 'on the same side', and that it could easily be accused of being 'anti-Communautaire'.[290] While its relations with the Parliament have been described as 'stable and cooperative',[291] there has been strong criticism of the 'indifference displayed at the Council's highest level to the auditing functions and findings of the European Court

of Auditors'.[292] More general assessments of the Court of Auditors vary. Thus, one study suggests that it has an uneasy relationship with the Commission, has come into conflict with the Parliament's budgetary control committee, has been largely ignored by the Council, and remains virtually unknown to most national parliaments, although there have been other more positive appraisals of its evolving institutional role.[293]

9 EU ADVISORY BODIES

The discussion thus far has concerned the bodies listed as EU institutions in Article 13 TEU. There are, however, other institutions that play a role within the EU. Article 300 TFEU specifies two EU advisory bodies, the Economic and Social Committee and the Committee of the Regions.

(A) ECONOMIC AND SOCIAL COMMITTEE

The Economic and Social Committee represents various sectional or functional interests.[294] It consists of 'representatives of organisations of employers, of the employed, and of other parties representative of civil society, notably in socio-economic, civic, professional and cultural areas'.[295] The overall number cannot exceed 350 and the Council, acting on a proposal from the Commission, decides on the Committee's composition.[296] The Council, acting by qualified majority, appoints Committee members for five years renewable, on the basis of proposals from Member States.[297] There are three main groups at present representing employers, workers, and other interest groups.[298]

The members of the Economic and Social Committee may not be bound by any mandatory instructions, must be completely independent in the performance of their duties, and must act in the general interest of the EU.[299] The Economic and Social Committee operates via a number of committees. It must be consulted by the Council, Commission, and Parliament where the Treaties so provide, and may also be consulted where the institutions consider it appropriate.[300]

The Economic and Social Committee has not, traditionally, been particularly influential, but its status could be enhanced by the increased institutional attention being paid to the importance of 'civil society' in enhancing EU legitimacy, and by recognition in the Lisbon Treaty of the role of civil society.[301]

(B) COMMITTEE OF THE REGIONS

This Committee was established by the Maastricht Treaty to represent regional and local bodies, in part to counter the idea that the EU was becoming too centralized.[302] The total number

of members is 350. The Committee of the Regions consists of representatives of regional and local bodies who either hold a regional or local authority electoral mandate, or are politically accountable to an elected assembly.[303] The Council, acting by qualified majority, appoints the members for a renewable five-year term.[304] They must be independent and act in the Union's general interest.[305] The Parliament, Council, and Commission must consult the Committee of the Regions where the Treaty specifies, and it may be consulted in other instances, in particular where a measure concerns cross-border cooperation.[306] Three main principles lie at the heart of the Committee's work: subsidiarity, proximity, and partnership.[307] These principles inform its contributions to legislative proposals. They also underpin its general studies[308] and those of a more sectoral nature.[309]

10 AGENCIES

Agencies are a prominent feature of modern democratic polities.[310] They facilitate use of experts outside the normal bureaucratic structure; allow the parent department to concentrate on strategic policy; and insulate technical regulatory issues from political change, thereby increasing the credibility of the choices thus made. Agencies have become an important institutional feature of the EU.[311] They deal with areas as diverse as air safety, medicines, border control, food safety, maritime safety, environment, trade marks, and fundamental rights,[312] and are also used in what were the Second[313] and Third Pillars.[314] The Commission's rationale for agency creation echoes that set out above: agencies 'would make the executive more effective at European level in highly specialized technical areas requiring advanced expertise and continuity, credibility and visibility of public action',[315] thereby enabling the Commission to focus on policy formation.[316]

[316] Ibid 2.

The powers accorded to agencies vary.[317] Most have informational and coordinating functions; a few can take individualized decisions; and some have quasi-regulatory powers. None however are true 'regulatory' agencies as that term is normally understood. They do not have powers to make rules and adjudicate in the manner that is common for agencies in the USA. There are legal and political reasons for the limits on agency powers.

The principal legal constraint is the *Meroni* principle,[318] which stipulated that it was not possible to delegate power involving a wide margin of discretion, since it transferred responsibility by replacing the choices of the delegator for those of the body to whom power was delegated.

The Commission provided the political rationale for limiting agency powers. It has been supportive of agencies, but nonetheless wished to adhere to the legal constraints for reasons that transcended the dictates of formal law. This was in order to preserve 'the unity and integrity of the executive function' and to ensure 'that it continues to be vested in the chief of the Commission if the latter is to have the required responsibility *vis-à-vis* Europe's citizens, the Member States and the other institutions'.[319] The participation of agencies should therefore be 'organised in a way which is consistent and in balance with the unity and integrity of the executive function and the Commission's ensuing responsibilities'.[320]

The Commission has therefore been reluctant to create real regulatory agencies exercising discretionary power through adjudication and rule-making, since if such power could be delegated the Commission's sense of the unity of the executive function vested in it would be undermined. The emphasis placed on the unity and integrity of the executive function located in the President of the Commission was not fortuitous, given that the 2002 Communication was issued during the deliberations of the Convention on the Future of Europe, where the location of executive power was one of the most divisive issues.[321]

The Commission's concern as to the unity of the executive function played out not only in relation to the powers accorded to agencies, but also in relation to agency decision-making structure. The composition of agency boards has been crucial in this respect.[322] The Commission remains concerned about agency decision-making structure, stating that 'the degree of accountability of the Commission cannot exceed the degree of influence of the Commission on the agency's activities'.[323]

In addition to the agencies described above, there are also executive agencies, which are designed to manage some of the non-discretionary functions that fall within the direct administrative responsibility of the Commission, in order to enable the Commission to concentrate on its 'core tasks', while avoiding the problems associated with outsourcing that led to the downfall of the Santer Commission.[324]

11 CONCLUSIONS

i. The EU institutions should not be seen as unitary actors. Each institution has its own distinctive identity and role, but the internal structure and composition of each institution is varied and complex.

ii. The powers of the institutions are formally governed by Treaty provisions, but their actual functioning and interaction are determined by a range of inter-institutional agreements and practices, as well as by significant political developments.

iii. Recent years have witnessed a period of institutional flux, with proposals for reform of the internal working and governance structures of EU administration, following the resignation of the Santer Commission.

iv. The ratification of the Lisbon Treaty has resolved in formal legal terms a number of institutional issues that had dominated the debates about Treaty reform for almost a decade. It remains to be seen in the light of subsequent political and legal experience how these changes affect the individual institutions and the way in which they interact.

v. It will be particularly interesting to see how the division of executive power between the President of the European Commission and the President of the European Council unfolds over time. It should be remembered that both must work with the Council, and that the Member State that holds the Presidency of the Council for six months will also have views as to the priorities that should be accorded to particular policy initiatives.

vi. It will be equally interesting in the post-Lisbon world to see how the further extension of the EP's legislative competence, through the extension of the ordinary legislative procedure to new areas, impacts on the passage of particular legislative initiatives and on the planning of the overall legislative agenda.

3

COMPETENCE

1 CENTRAL ISSUES

i. The general principle is, and always has been, that the EU only has the competence conferred on it by the Treaties. This is what is meant by saying that the EU has attributed competence. Prior to the Lisbon Treaty, it was however difficult to decide on the limits of that competence. There were no general categories of competence, and thus the limits of competence in a specific area could only be discerned by paying close attention to the detailed Treaty provisions. There could be real disagreement as to whether the competence in a particular area was, for example, exclusive or shared. These difficulties were compounded by the fact that the real scope of EU competence would have to take account of the case law interpreting the relevant Treaty provisions, and legislation made pursuant to those provisions. The difficulties were especially prominent in relation to Treaty Articles that were broadly framed, such as Articles 95 and 308 EC.

ii. The existence and scope of EU competence were therefore key elements in the reform process that culminated in the Lisbon Treaty. There are now categories of competence specified in the Lisbon Treaty: the EU may have exclusive competence, shared competence, or competence only to take supporting, coordinating, or supplementary action. Legal consequences flow from that categorization. This chapter examines the three principal categories of EU competence, and their implications for the divide between EU and Member State power. There are, however, certain areas of EU competence that do not fall within these categories and they will also be examined within the course of this chapter. The discussion will consider the extent to which the new regime clarifies the scope of EU competence and contains EU power.

iii. The Lisbon Treaty makes provision not only for the existence and scope of EU competence, but also for whether the competence should be exercised. This issue is governed by the principle of subsidiarity, which was initially introduced by the Maastricht Treaty. A revised version of the principle is contained in the Lisbon Treaty and a Protocol attached to the Treaty. The meaning and application of this concept can give rise to problems, as will be seen in the subsequent discussion.

2 IMPETUS FOR REFORM

The EU can only act within the limits of the powers assigned to it. It has in that sense attributed competences. This principle was previously embodied in Articles 5(1) and 7(1) EC and has been reaffirmed by Article 5(2) TEU of the Lisbon Treaty, which states that:

> Under the principle of conferral, the Union shall act only within the limits of the competences conferred upon it by the Member States in the Treaties to attain the objectives set out therein. Competences not conferred upon the Union in the Treaties remain with the Member States.

It was, however, not easy prior to the Lisbon Treaty to specify with exactitude the division of competence between the EU and Member States,[1] and was therefore an issue identified for further inquiry after the Nice Treaty 2000.[2] It was felt that Article 5 EC provided insufficient protection for rights of Member States, and little safeguard against an increasing shift of power from the states to the EU.

We should nonetheless be cautious about the assumption that the 'competence problem' was the result primarily of some unwarranted arrogation of power by the EU to the detriment of states' rights. The reality was that EU competence resulted from the symbiotic interaction of four variables: Member State choice as to the scope of EU competence, as expressed in Treaty revisions; Member State, and, since the SEA, European Parliament acceptance of legislation that fleshed out the Treaty Articles; the jurisprudence of the EU Courts; and decisions taken by the institutions as to how to interpret, deploy, and prioritize the power accorded to the EU.[3]

The Laeken Declaration[4] specified in greater detail the inquiry into competence that had been left open after the Nice Treaty 2000. Four principal forces drove the reform process: clarity, conferral, containment, and consideration. The desire for 'clarity' reflected the concern that the Treaty provisions on competences were unclear, jumbled, and unprincipled. The idea of 'conferral' captured not only the idea that the EU should act within the limits of the powers attributed to it, but also carried the more positive connotation that the EU should be accorded the powers necessary to fulfil the tasks assigned to it by the enabling Treaties. The desire for 'containment' reflected the concern that the EU had too much power, and that it should be substantively limited.[5] This argument must nonetheless be kept in perspective, since a significant factor in the distribution of competence has been the conscious decision of the Member States to grant new spheres of competence to the EU. This is where the fourth factor came into play, 'consideration' of whether the EU should continue to have the powers that it had been given in the past, a re-thinking of the areas in which the EU should be able to act.

[1] A Dashwood, 'The Limits of European Community Powers' (1996) 21 ELRev 113; G de Búrca, 'Setting Limits to EU Competences', Francisco Lucas Pires Working paper 2001/02, www.fd.unl.pt/je/wpflp02a.doc; U di Fabio, 'Some Remarks on the Allocation of Competences between the European Union and its Member States' (2002) 39 CMLRev 1289; A von Bogdandy and J Bast, 'The European Union's Vertical Order of Competences: The Current Law and Proposals for its Reform' (2002) 39 CMLRev 227; P Craig, 'Competence: Clarity, Conferral, Containment and Consideration' (2004) 29 ELRev 323; S Weatherill, 'Better Competence Monitoring' (2005) 30 ELRev 23; F Mayer, 'Competences—Reloaded? The Vertical Division of Powers in the EU and the New European Constitution' (2005) 3 I-CON 493; R Schutze, *From Dual to Cooperative Federalism, The Changing Structure of European Law* (Oxford University Press, 2009).

[2] Treaty of Nice, Declaration 23 [2001] OJ C80/1.

[3] P Craig, 'Competence and Member State Autonomy: Causality, Consequence and Legitimacy' in B de Witte and H Micklitz (eds), *The European Court of Justice and the Autonomy of Member States* (Intersentia, 2011) ch 1.

[4] European Council, 14–15 Dec 2001, 21–22.

[5] Mayer (n 1) 504–505.

The reality is that there was little systematic re-thinking of the areas in which the EU should be able to act. The Convention on the Future of Europe did not conduct any root and branch re-consideration of all heads of EU competence. The general strategy was to take the existing heads of competence as given. The emphasis was on clarity, conferral, and containment.

3 LISBON STRATEGY

(A) CATEGORIES AND CONSEQUENCES

The Lisbon Treaty repeats with minor modifications the provisions in the Constitutional Treaty. The provisions are contained in the TEU and in the TFEU. Thus Article 4 TEU states that competences not conferred on the Union remain with the Member States. Article 5 TEU stipulates that the limits of Union competences are governed by the principle of conferral. It is however the TFEU that contains the main provisions on competence. There are categories of competence that apply to specified subject matter areas, and concrete legal consequences flow from such categorization. The principal categories are where the EU's competence is exclusive, where it is shared with the Member States, where the EU is limited to supporting/coordinating action, with special categories for EU action in the sphere of economic and employment policy, and Common Foreign and Security Policy, CFSP. Article 2 TFEU provides that:

> 1. When the Treaties confer on the Union exclusive competence in a specific area, only the Union may legislate and adopt legally binding acts, the Member States being able to do so themselves only if so empowered by the Union or for the implementation of Union acts.
>
> 2. When the Treaties confer on the Union a competence shared with the Member States in a specific area, the Union and the Member States may legislate and adopt legally binding acts in that area. The Member States shall exercise their competence to the extent that the Union has not exercised its competence. The Member States shall again exercise their competence to the extent that the Union has decided to cease exercising its competence.
>
> 3. The Member States shall coordinate their economic and employment policies within arrangements as determined by this Treaty, which the Union shall have competence to provide.
>
> 4. The Union shall have competence, in accordance with the provisions of the Treaty on European Union, to define and implement a common foreign and security policy, including the progressive framing of a common defence policy.
>
> 5. In certain areas and under the conditions laid down in the Treaties, the Union shall have competence to carry out actions to support, coordinate or supplement the actions of the Member States, without thereby superseding their competence in these areas.
>
> Legally binding acts of the Union adopted on the basis of the provisions of the Treaties relating to these areas shall not entail harmonisation of Member States' laws or regulations.
>
> 6. The scope of and arrangements for exercising the Union's competences shall be determined by the provisions of the Treaties relating to each area.

(B) EXPRESS AND IMPLIED POWER

There are two important points that should be stressed before examining the particular categories of competence, since these points apply to the entirety of the subsequent discussion.

First, there can be disagreement as to the ambit of a particular Treaty Article, and this is so irrespective of the category of competence which applies to the area. Treaty Articles may be drafted relatively specifically, or they may be framed in more broad open-textured terms. In either case

it is always possible for there to be disagreement about the ambit, scope, or interpretation of the relevant Treaty Article, more especially when it is cast in broad terms.[6] The ECJ has in general been disinclined to place limits on broadly worded Treaty Articles. It can however do so. In the *Tobacco Advertising* case the ECJ held that a directive relating to tobacco advertising could not be based on Article 95 EC.[7]

Case C–376/98 **Germany v European Parliament and Council** [2000] ECR I-8419

[Note Lisbon Treaty renumbering: Arts 57(2), 66, 100a, 164 are now Arts 53(2), 62, 114 TFEU and Art 19 TEU]

Germany sought the annulment of a Directive designed to harmonize the law relating to the advertising and sponsorship of tobacco. The Directive had been based on Articles 57(2), 66, and 100a. Article 100a allows the adoption of harmonization measures for the functioning of the internal market. The ECJ cited Articles 100a, 3(c), and 7a of the EC Treaty. It then continued as follows.

THE ECJ

83. Those provisions, read together, make it clear that the measures referred to in Article 100a(1) . . . are intended to improve the conditions for the establishment and functioning of the internal market. To construe that article as meaning that it vests in the Community legislature a general power to regulate the internal market would not only be contrary to the express wording of the provisions cited above, but would also be incompatible with the principle embodied in Article 3b . . . that the powers of the Community are limited to those specifically conferred on it.

84. Moreover, a measure adopted on the basis of Article 100a . . . must genuinely have as its object the improvement of the conditions for the establishment and functioning of the internal market. If a mere finding of disparities between national rules and of the abstract risk of obstacles to the exercise of fundamental freedoms or of distortions of competition liable to result therefrom were sufficient to justify the choice of Article 100a as a legal base, judicial review of compliance with the proper legal basis might be nugatory. The Court would then be prevented from discharging the function entrusted to it by Article 164 . . . of ensuring that the law is observed in the interpretation and application of the Treaty.

85. So, in considering whether Article 100a was the proper legal basis, the Court must verify whether the measure whose validity is at issue in fact pursues the objectives stated by the Community legislature . . .

While there are therefore limits to what is now Article 114 TFEU, subsequent case law on related subject matter has shown that the ECJ is willing to accept use of this Article as the legal basis for the enacted measure.[8] This is exemplified by the 2006 *Tobacco Advertising* case,[9] where the ECJ upheld the validity of a revised directive on tobacco advertising, which included, subject to limited exceptions,

[6] See, eg, Case C–84/94 *United Kingdom v Council* [1996] ECR I–5755; Case C–233/94 *Germany v European Parliament and Council* [1997] ECR I–2405.

[7] T Hervey, 'Up in Smoke? Community (Anti)-Tobacco Law and Policy' (2001) 26 ELRev 101.

[8] Case C–377/98 *Netherlands v Parliament and Council* [2001] ECR I–7079; Case C–491/01 *The Queen v Secretary of State for Health, ex p British American Tobacco (Investments) Ltd and Imperial Tobacco Ltd* [2002] ECR I–11453; Case C–210/03 *R v Secretary of State for Health, ex p Swedish Match* [2004] ECR I–11893.

[9] Case C–380/03 *Germany v European Parliament and Council* [2006] ECR I–11573.

prohibitions on advertising in the press and radio and constraints on sponsorship by tobacco companies. The Court concluded that this could be adopted under what was Article 95 EC, since there were disparities between the national laws on advertising and sponsorship of tobacco products, which could affect competition and inter-state trade.

Secondly, the EU institutions may claim that a particular Treaty Article contains an implied power to make the particular regulation. While the notion of implied power is well known in domestic and international legal systems, its meaning is more contestable. Under the narrower formulation, the existence of a given power implies the existence of any other power that is reasonably necessary for the exercise of the former. Under the wider formulation, the existence of a given objective implies the existence of power reasonably necessary to attain it. The narrow sense of implied power has long been accepted.[10] The ECJ has also embraced the wider formulation. This is exemplified by the following cases.

Cases 281, 283–285, 287/85 **Germany v Commission** [1987] ECR 3203

[Note Lisbon Treaty renumbering: Art 118 is now Art 153 TFEU]

The Commission made a decision pursuant to Article 118 which established a prior communication and consultation process in relation to migration policies affecting workers from non-EC countries. The Member States were to inform the Commission and other Member States of their draft measures concerning entry, residence, equality of treatment, and the integration of such workers into the social and cultural life of the country. After notification to the Commission of such draft measures there would then be consultation with the Commission and other Member States. A number of States challenged this measure as being *ultra vires* the Commission. Article 118, which concerned collaboration in the social field, did not expressly give the Commission power to make binding decisions. The ECJ held that migration policy in relation to non-Member States could fall within Article 118, to some extent at least, because of the effects of such migration on the employment situation in the EC.

THE ECJ

27 . . . [I]t must be considered whether the second paragraph of Article 118, which provides that the Commission is to act, *inter alia*, by arranging consultations, gives it the power to adopt a binding decision with a view to the arrangement of such consultations.

28. In that connection it must be emphasised that where an Article of the EEC Treaty . . . confers a specific task on the Commission it must be accepted, if that provision is not to be rendered wholly ineffective, that it confers on the Commission necessarily and *per se* the powers which are indispensable in order to carry out that task. Accordingly, the second paragraph of Article 118 must be interpreted as conferring on the Commission all the powers which are necessary in order to arrange the consultations. In order to perform that task of arranging consultation the Commission must necessarily be able to require the Member States to notify essential information, in the first place to identify the problems and in the second place in order to pinpoint the possible guidelines for any future joint action on the part of the Member States; likewise it must be able to require them to take part in consultation.

[10] Case 8/55 *Fédération Charbonnière de Belgique v High Authority* [1956] ECR 245, 280.

Case 176/03 **Commission v Council**
[2005] ECR I-7879

The Council enacted a Framework Decision under what was the Third Pillar, Title VI TEU, that required Member States to prescribe criminal penalties for certain environmental offences. The Commission argued that the measure should have been enacted under Article 175 EC, since it was concerned with the environment. The ECJ found that the principal aim of the Framework Decision was to protect the environment, and that it should have been made under Article 175. It accepted that, as a general rule, neither criminal law nor criminal procedure fell within Community competence, but then reasoned as follows.

THE ECJ

48. However, [this] does not prevent the Community legislature, when the application of effective, proportionate and dissuasive criminal penalties by the competent national authorities is an essential measure for combating serious environmental offences, from taking measures which relate to the criminal law of the Member States which it considers necessary in order to ensure that the rules which it lays down on environmental protection are fully effective.

The CFI has, however, more recently held that it is only exceptionally that such implicit powers are recognized, and in order to be so recognized they must be necessary to ensure the practical effect of the provisions of the Treaty or the basic regulation at issue.[11]

4 EXCLUSIVE COMPETENCE

(A) BASIC PRINCIPLES

Article 2(1) TFEU establishes the category of exclusive competence, which carries the consequence that only the Union can legislate and adopt legally binding acts. The Member States can only do so if empowered by the Union or for the implementation of Union acts.

The subject matter areas that fall within exclusive competence are set out in Article 3(1) TFEU: customs union; the establishing of the competition rules necessary for the functioning of the internal market; monetary policy for the Member States whose currency is the Euro; the conservation of marine biological resources under the common fisheries policy; and the common commercial policy. Article 3(2) TFEU states that the Union shall also have exclusive competence for the conclusion of an international agreement when its conclusion is provided for in a legislative act of the Union, or is necessary to enable the Union to exercise its internal competence, or insofar as its conclusion may affect common rules or alter their scope.

(B) AREA EXCLUSIVITY

The areas specified in Article 3(1) that fall within the EU's exclusive competence are limited. We have seen that a pressing concern in the Laeken Declaration and the Convention on the Future of Europe was to contain EU power. The domain of exclusive competence fares pretty well when judged by this criterion, given that the areas that come within this category are relatively discrete and the list is small. This is important because the consequences of inclusion are severe: the Member States have no

[11] Case T–240/04 *French Republic v Commission* [2007] ECR II–4035, [37]; Case T–143/06 *MTZ Polyfilms Ltd v Council* [2009] ECR II–4133, [47].

autonomous legislative competence and they cannot adopt any legally binding act. They can neither legislate, nor make any legally binding non-legislative act.

The very creation of categories of competence inevitably means that there will be problems of demarcating borderlines between the different categories. Such problems can arise in demarcating the line between exclusive and shared competence. There are, for example, ambiguities about the relationship between the competition rules, which are a species of exclusive competence, and the internal market, which is shared competence.[12] There may also be difficult borderline problems between provisions relating to the customs union and other aspects of the internal market, since the customs union falls within exclusive competence, while the internal market is shared competence. It may be difficult to decide whether a case is concerned with the customs union, tariffs, quotas, and the like, or whether it is really 'about' discriminatory taxation.[13]

(c) CONDITIONAL EXCLUSIVITY

The EU is also accorded exclusive competence to make an international agreement,[14] provided that the conditions in Article 3(2) TFEU are met.

> The Union shall also have exclusive competence for the conclusion of an international agreement when its conclusion is provided for in a legislative act of the Union or is necessary to enable the Union to exercise its internal competence, or insofar as its conclusion may affect common rules or alter their scope.

Article 3(2) TFEU should be read in conjunction with Article 216 TFEU. Article 216 is concerned with whether the EU has competence to conclude an international agreement. Article 3(2) deals with the related, but distinct, issue as to whether that competence is exclusive or not. Article 216 TFEU reads as follows.

> 1. The Union may conclude an agreement with one or more third countries or international organisations where the Treaties so provide or where the conclusion of an agreement is necessary in order to achieve, within the framework of the Union's policies, one of the objectives referred to in the Treaties, or is provided for in a legally binding Union act or is likely to affect common rules or alter their scope.
>
> 2. Agreements concluded by the Union are binding upon the institutions of the Union and on its Member States.

The catalyst for Article 216 TFEU was the report of the Working Group on External Action. Prior to the Lisbon Treaty the EC Treaty accorded express power to make international agreements in certain limited instances,[15] and this was supplemented by the ECJ's jurisprudence delineating the circumstances in which there could be an implied external competence to make an international agreement. The Working Group recommended that there should be a Treaty provision that reflected this case law.[16] This was embodied in the Constitutional Treaty, and taken over into the Lisbon Treaty as Article 216 TFEU. The breadth of Article 216 is readily apparent, and the reality is that it will be rare, if ever, that the EU lacks power to conclude an international agreement. The case law on the scope of the EU's external competence, and the extent to which it is exclusive or parallel with that of the Member States,

is complex.[17] Article 3(2) TFEU stipulates three instances in which the EU has exclusive external competence. The interpretation of this provision is by no means easy.[18] The complexity of the case law necessarily means that embodying the principles in a Treaty Article was always going to be difficult. Article 3(2) read together with Article 216 TFEU comes close to eliding the EU's power to act via an international agreement with the exclusivity of that power, an issue which pre-occupied much of the case law in this area.

(i) *External Competence and Exclusivity: Pre-Lisbon*

We need therefore to take a brief step back to the pre-Lisbon case law to understand the significance of Article 3(2) TFEU. The ECJ had for some considerable time recognized Community competence to conclude an international agreement where this was necessary to effectuate its internal competence, even where there was no express external competence.[19] The issue of whether this implied external power was exclusive was treated as distinct from the existence of such power. Implied external competence could be exclusive or shared,[20] but the criteria for the divide were not entirely clear.[21] The ECJ's formulations as to when exclusivity could arise were however far-reaching.

Thus in *ERTA* the ECJ held that when the Community acted to implement a common policy pursuant to the Treaty, the Member States no longer had the right to take external action where this would affect the rules thus established or distort their scope.[22] This position was modified in *Kramer*.[23] The ECJ held that the EC could possess implied external powers even though it had not taken internal measures to implement the relevant policy, but that until the EC exercised its internal power the Member States retained competence to act, provided that their action was compatible with Community objectives. The scope of exclusivity was thrown into doubt in the *Inland Waterways* case,[24] where the ECJ held that the EC could have exclusive external competence, even though it had not exercised its internal powers, if Member State action could place in jeopardy the Community objective sought to be attained.

The ECJ pulled back from the very broad reading of exclusivity in the *Inland Waterways* case in Opinion 1/94 on the *WTO Agreement*.[25] It held that exclusive external competence was in general

dependent on the actual exercise of internal powers and not their mere existence.[26] The *Inland Waterways* case was distinguished on the ground that the EC's internal objective could not be attained without making an international agreement and internal EC rules could not realistically be made prior to the conclusion of such an agreement.[27] This rationale was held not to apply to the *WTO* case.[28] This reasoning has been followed in later decisions.[29]

Subsequent jurisprudence nonetheless revealed that the ECJ construed broadly the idea of the EC having exercised its powers internally, and that the ECJ was also prepared to give a wide interpretation to the circumstances where this gave rise to exclusive external competence for the EC. This was apparent from the 'open skies' litigation, involving Commission actions against several Member States.[30] The Commission alleged that Member States had infringed the Treaty by concluding bilateral 'open skies' agreements with the USA, on the ground that the EC had exclusive external competence in this area. It argued that the EC had exclusive external competence in line with the *ERTA* ruling, because it had exercised its internal competence to some degree within the relevant area. The ECJ accepted this argument. The Council had adopted a package of legislation based on Article 80(2) EC. The ECJ held that the *ERTA* ruling could apply to internal power exercised in this manner, and therefore the EC had an implied external competence. It followed that when the EC made common rules pursuant to this power, the Member States no longer had the right, acting individually or collectively, to undertake obligations towards non-Member States which affected those rules or distorted their scope.

The judgment confirmed the broad reading given to the phrase 'affected those rules or distorted their scope', since it was this that transformed external competence into exclusive external competence. The ECJ, in accord with prior case law, held that this would be so where the international agreement fell within the scope of the common rules, or within an area that was already largely covered by such rules, and this was so in the latter case even if there was no contradiction between the international commitments and the internal rules. EC legislative provisions relating to the treatment of non-Member State nationals, or expressly conferring power to negotiate with non-Member States, gave the EC exclusive external competence.

The same general message emerged from the *Lugano* Opinion:[31] implied external competence could be exclusive or shared, but where the EC had exercised its powers internally, then the ECJ would be inclined to conclude that this gave rise to exclusive external competence, whenever such exclusive competence was needed to 'preserve the effectiveness of Community law and the proper functioning of the systems established by its rules'.[32]

(ii) *External Competence and Exclusivity: Post-Lisbon*

Article 3(2) TFEU specifies three situations in which the EU has exclusive external competence. The first is where conclusion of an international agreement is provided for by a legislative act of the Union. The wording is significant. Article 3(2) TFEU does not state that the Union shall have exclusive external competence where a Union legislative act says that this shall be so. Nor does it state that the EU shall have such exclusive external competence only in the areas in which it has an exclusive internal

[31] Opinion 1/03 *Lugano* (n 20) [114]–[115].
[32] Ibid [131].

competence. It states that where the conclusion of an international agreement is provided for in a legislative act, the Union will have exclusive external competence. Thus express external empowerment to conclude an international agreement is taken to mean exclusive external competence, with the corollary that Member States are pre-empted from concluding any such agreement independently, and from legislating or adopting any legally binding act.

The same elision of external power and exclusive external power is evident in the second situation listed in Article 3(2) TFEU. There is, as we have seen, ECJ jurisprudence that accords the EU competence to conclude an international agreement where this is necessary to effectuate its internal competence, even where there is no express external competence.[33] The effect of Article 3(2) TFEU is nonetheless that the EU has exclusive external competence to conclude an international agreement where it is necessary to enable the Union to exercise its competence internally, irrespective of the type of internal competence possessed by the EU. Taken literally this means that exclusive external competence to conclude an international agreement resides with the Union, where this is necessary for the exercise of internal competence, even where the internal competence is only shared or even where the EU can only take supporting or coordinating action. It might be argued that any EU external competence to make an international agreement must be bounded by the nature of its internal competence in the relevant area. The effect of Article 3(2) TFEU would still be that the EU would have exclusive external competence to conclude an international agreement that was necessary to enable the EU to exercise an internal competence, even where the internal competence only allowed supporting action, provided that the international agreement did not contain provisions that went beyond this type of action.

The third of the situations mentioned in Article 3(2) TFEU is that the EU shall have exclusive competence insofar as the conclusion of an international agreement 'may affect common rules or alter their scope'. This is in accord with the ECJ's case law considered above. The reality is that this phrase has been interpreted broadly by the ECJ, such that in most instances where the EU has exercised its power internally it will be held to have an exclusive external competence.

Cremona has argued convincingly that Article 3(2) 'conflates the two separate questions of the existence of implied external competence and the exclusivity of that competence',[34] and that the combination of this Article when read with Article 216 TFEU is that implied shared competence could disappear. This does seem to be the outcome of the Treaty provisions, subject to the caveats mentioned above, and it is, as Cremona states, hard to defend in policy terms.[35]

The result is moreover difficult to square with the practical realities in this area. Thus notwithstanding the relatively broad judicial reading given to exclusive external competence, the reality was that prior to the Lisbon Treaty many external powers were shared between the Member States and the EU, through mixed agreements where power to conclude the agreement was shared with the Member States.[36] This might be because the conditions in the case law for the Community's exclusive external competence were not satisfied, where for example the EC had not adopted sufficient internal measures to accord it exclusive external competence.[37] External competence might also be shared because the EC Treaty did not confer sufficient competence on the EC to ratify the agreement in its entirety, thereby requiring allocation as between the EC and the Member States of the power to conclude the

agreement with non-Member States,[38] or where the EC had some competence over the relevant area, but this was limited to laying down minimum requirements, thereby leaving Member States free to apply the rules flowing from the international agreement over and beyond this.[39]

5 SHARED COMPETENCE

(A) BASIC PRINCIPLES

Article 2(2) TFEU defines shared competence. The wording is important and Article 2(2) states that:

> When the Treaties confer on the Union a competence shared with the Member States in a specific area, the Union and the Member States may legislate and adopt legally binding acts in that area. The Member States shall exercise their competence to the extent that the Union has not exercised its competence. The Member States shall again exercise their competence to the extent that the Union has decided to cease exercising its competence.

The areas that fall within shared competence are delineated in Article 4 TFEU. Shared competence is the general residual category, since Article 4(1) provides that the Union shall share competence with the Member States where the Treaties confer on it a competence which does not relate to the categories referred to in Articles 3 and 6 TFEU, which deal respectively with exclusive competence, and that where the Union is restricted to taking action to support, coordinate, or supplement Member State action. This follows also from Article 4(2), which states that shared competence applies in the 'principal areas' listed, implying thereby that the list is not necessarily exhaustive. The idea that shared competence is the default position must nonetheless be read subject to the special category of competence dealing with economic and employment policy, Article 5 TFEU, and that dealing with foreign and security policy, Article 2(4) TFEU, Title V TEU. Article 4 TFEU states that:

> 1. The Union shall share competence with the Member States where the Treaties confer on it a competence which does not relate to the areas referred to in Articles 3 and 6.
> 2. Shared competence between the Union and the Member States applies in the following principal areas:
>
> (a) internal market;
> (b) social policy, for the aspects defined in this Treaty;
> (c) economic, social and territorial cohesion;
> (d) agriculture and fisheries, excluding the conservation of marine biological resources;
> (e) environment;
> (f) consumer protection;
> (g) transport;
> (h) trans-European networks;
> (i) energy
> (j) area of freedom, security and justice;
> (k) common safety concerns in public health matters, for the aspects defined in this Treaty.

[38] Opinion 2/00 (n 37) [5].
[39] Opinion 2/91 (n 19) [16]–[21].

> 3. In the areas of research, technological development and space, the Union shall have competence to carry out activities, in particular to define and implement programmes; however, the exercise of that competence shall not result in Member States being prevented from exercising theirs.
>
> 4. In the areas of development cooperation and humanitarian aid, the Union shall have competence to carry out activities and conduct a common policy; however, the exercise of that competence shall not result in Member States being prevented from exercising theirs.

There can be boundary problems between shared competence and the other two principal categories, exclusive competence and the category where the EU is limited to taking supporting, coordinating, or supplementary action. Thus it is, for example, not easy to decide which aspects of social policy come within shared competence. There are also problems in ensuring a fit between Article 4(3) and Article 4(4) TFEU, which assume that the relevant areas fall within shared competence, and the detailed provisions in these areas, many of which are framed in terms of the EU supporting, coordinating, and supplementing Member State action.[40]

(B) PRE-EMPTION

Article 2(2) TFEU stipulates that the Member State can exercise competence only to the extent that the Union has not exercised or has decided to cease to exercise its competence within any such area. Member State action is therefore pre-empted where the Union has exercised its competence, with the consequence that the amount of shared power held by the Member State in these areas may diminish over time. This conclusion must however be qualified in four ways.

First, Member States will lose their competence within the regime of shared power only to the extent that the Union has exercised *its* competence. The scope of the EU's competence within these areas can only be determined by considering the detailed provisions that divide power in areas as diverse as social policy, energy, the internal market, and consumer protection. Thus the real limits on Union competence must be found in the detailed provisions which delineate what the EU can do in the diverse areas where power is shared.

Secondly, the pre-emption will occur only *to the extent* that the EU has exercised its competence in the relevant area. There are different ways in which the EU can intervene in a particular area.[41] The EU may choose to make uniform regulations, it may harmonize national laws, it may engage in minimum harmonization, or it may impose requirements of mutual recognition. Thus, for example, where the EU chooses minimum harmonization, Member States will have room for action in the relevant area. The Member States were nonetheless sufficiently concerned about the possible pre-emptive impact of Article 2(2) TFEU to press for the inclusion of the Protocol on Shared Competence,[42] which seeks to reinforce the point made above. It provides that where the Union has taken action in an area governed by shared competence, 'the scope of this exercise of competence only covers those elements governed by the Union act in question and therefore does not cover the whole area'.[43] It is nonetheless still possible for Union acts to cover the entire area subject to shared power, provided that the EU could do so under the relevant Treaty provisions.

Shared Competence and Constitutional Change in the European Community' in D O' Keefe and P Twomey (eds), *Legal Issues of the Maastricht Treaty* (Chancery Law Publishing, 1994) ch 2; M Dougan, 'Minimum Harmonization and the Internal Market' (2000) 37 CMLRev 853; M Dougan, 'Vive la Difference? Exploring the Legal Framework for Reflexive Harmonisation within the Single Market' (2002) 1 Annual of German and European Law 13.

[42] Protocol (No 25).

[43] See also Declaration 18.

Thirdly, Article 2(2) TFEU expressly provides for the possibility that the EU will cease to exercise competence in an area subject to shared competence, the consequence being that competence then reverts to the Member States. A Declaration attached to the Treaty[44] specifies different ways in which this might occur.

The final qualification concerns Article 4(3) and Article 4(4) TFEU. The essence of both Treaty provisions is to make clear that the Member States can continue to exercise power even if the EU has exercised its competence within these areas. Thus even if the EU has defined and implemented programmes relating to research, technological development, and space, this does not preclude Member States from exercising their competence in such areas. The same reasoning is applied in the context of development cooperation and humanitarian aid.

(c) SCOPE AND VARIATION

Shared competence constitutes, subject to the above, the default position in relation to division of competence within the Lisbon Treaty, but that does not mean that the nature of the sharing will be the same in all the areas to which shared competence applies. The reality is that shared competence is simply an umbrella term, with the consequence that there is significant variation as to the division of competence in different areas of EU law. It follows that the precise configuration of power sharing in areas such as the internal market, consumer protection, energy, social policy, the environment, and the like can only be determined by considering the detailed rules that govern these areas, which are found in the relevant provisions of the TFEU.

The sharing of power in relation to, for example, the four freedoms is very different from the complex world of power sharing that operates within the area of freedom, security, and justice. There are indeed significant variations of power sharing that operate within the overall area of freedom, security, and justice. There is no magic formula that applies to all areas of shared power that determines the precise delineation of power in any specific area.

This is not a criticism as such, but rather the consequence of the fact that the EU has been attributed competence in different areas through Treaty amendments, coupled with the fact that the precise degree of power it has been accorded differs between these areas. This is recognized by Article 2(6) TFEU, which states that 'the scope of and arrangements for exercising the Union's competences shall be determined by the provisions of the Treaties relating to each area'.

6 SUPPORTING, COORDINATING, OR SUPPLEMENTARY ACTION

(a) BASIC PRINCIPLES

The third general category of competence allows the EU to take action to support, coordinate, or supplement Member State action, without thereby superseding their competence in these areas, and without entailing harmonization of Member States' laws: Article 2(5) TFEU.[45] While the EU cannot harmonize the law in these areas, it can pass legally binding acts on the basis of the provisions specific to them, and the Member States will be constrained to the extent stipulated by such acts. The meaning of supporting etc action, and hence the precise extent of EU power, varies somewhat in the different

[44] Ibid.

[45] R Schutze, 'Co-operative Federalism Constitutionalized: The Emergence of Complementary Competences in the EC Legal Order' (2006) 31 ELRev 167.

areas listed, but it is clear that the EU has a significant degree of power in these areas, albeit falling short of harmonization.[46]

The areas that fall within such competence are set out in Article 6 TFEU: protection and improvement of human health; industry; culture; tourism; education, vocational training, youth and sport; civil protection; and administrative cooperation. A bare reading of Article 6 TFEU gives the impression that the list is finite. This impression is however belied when reading the TFEU as a whole. It then becomes clear that there are other important areas in which the EU is limited, *prima facie* at least, to supporting, etc action, notably in respect of some aspects of social policy,[47] and certain facets of employment policy.[48]

The creation of categories of competence inevitably means that there will be boundary problems as between them. Thus, for example, regulation of the media might come under the internal market, which is shared competence, or it might be regarded as falling within culture, where only supporting, etc action is allowed. There are moreover difficulties in deciding which aspects of social policy fall within shared competence, and which come within this category.

(B) SCOPE AND VARIATION

It is important to understand the scope of EU power for areas that fall within this category. The meaning of EU action supporting, coordinating, or supplementing action by the Member States varies somewhat in the different areas listed, but the general approach is as follows.

Each substantive area begins with a provision setting out the objectives of Union action. Thus in relation to public health Article 168 TFEU lists, *inter alia*, the improvement of public health, prevention of illness, and the obviation of dangers to health. The EU is to complement national action on these topics. Member States have an obligation to coordinate their policies on such matters, in liaison with the Commission.[49] The Commission can coordinate action on such matters by exchanges of best practice, periodic monitoring, and evaluation.[50] The EU can also pass laws to establish 'incentive measures' designed to protect human health, and combat cross-border health scourges, subject to the mantra that this shall not entail harmonization.[51] Thus while harmonization is ruled out, the EU still has significant room for intervention through 'persuasive soft law', in the form of guidelines on best practice, monitoring, and the like, and through 'legal incentive measures'.[52] The same combination of soft law and legal incentive measures falling short of harmonization can be found in the other areas within this category.[53]

The scope of EU power within these areas should not however be underestimated. The standard approach under the Lisbon Treaty is for the EU to be empowered to take measures to attain the objectives listed in that area. The language of the empowerment varies. It is sometimes framed in terms of taking 'incentive measures',[54] on other occasions the language is in terms of 'necessary measures',[55] in yet other instances the terminology is 'specific measures'.[56]

[46] See, eg, Art 167 TFEU, culture; Art 168 TFEU, public health; Art 173 TFEU, industry.
[47] Art 153 TFEU.
[48] Art 147 TFEU.
[49] Art 168(2) TFEU.
[50] Art 168(2) TFEU.
[51] Art 168(5) TFEU.
[52] There are also aspects of public health that come within the shared power, where the scope for EU intervention is greater: Art 4(2)(k), Art 168(4) TFEU.
[53] Arts 165(4), 166(4) TFEU, education and vocational training; Art 167 TFEU, culture; Art 173(2)–(3) TFEU, industry; Art 195 TFEU, tourism; Art 196 TFEU civil protection.
[54] Arts 165(4), 166(4) TFEU, education and vocational training; Art 167(5) TFEU, culture; Art 168(5) TFEU, public health.
[55] Art 196(2) TFEU, civil protection.
[56] Art 195(2) TFEU, tourism; Art 173(3) TFEU, industry.

The salient point for present purposes is that whatsoever the precise terminology these measures constitute legally binding acts, normally passed in accordance with the ordinary legislative procedure. The boundary of this EU legislative competence is that such legal acts must be designed to achieve the objectives listed for EU involvement in the area. These objectives are however normally set at a relatively high level of generality, with the consequence that the EU is legally empowered to take binding measures provided that they fall within the remit of these broadly defined objectives and do not constitute harmonization of national laws. This is evident in relation to all areas that fall within this category of competence. The scope of EU legislative activity within these areas will be bounded by what is acceptable to the Member States in the Council and the European Parliament, but this does not alter the point being made here.

(c) LEGAL ACTS, HARMONIZATION, AND MEMBER STATE COMPETENCE

Article 2(5) TFEU provides that EU action designed to support, coordinate, or supplement Member State action does not supersede Member State competence. It also states that legally binding acts of the Union adopted on the basis of the provisions specific to these areas cannot entail harmonization of Member States' laws. Thus while the EU cannot harmonize the law in these areas, it can pass legally binding acts on the basis of the provisions specific to these areas. There are three important points that flow from this Treaty provision.

First, where the EU passes such legal acts they will bind the Member States and the competence of the Member States will be constrained to the extent stipulated by the legally binding act. Thus while Member State competence is not *per se* superseded merely because the EU has enacted legally binding acts, it will be constrained to the degree entailed by the EU legal act. It is clear moreover that the EU can pass legislative acts in these areas, provided that they do not entail harmonization and provided that there is foundation for the passage of such laws in the detailed provisions of the TFEU.

Secondly, the very meaning of harmonization, which the EU cannot do in relation to this category of competence, is not entirely clear. The proscription of harmonization measures means that legally binding acts cannot be adopted pursuant to Article 114 TFEU. A legally binding act made in an area where the EU only has competence to support, coordinate, or supplement Member State action could not be made pursuant to Article 114, since this would be an admission that the objective was to harmonize national law, which is the very thing prohibited by Article 2(5) TFEU. This however takes us only so far. The EU may enact a legally binding act in one of the areas covered by this category of competence, which is based on the relevant Treaty Article authorizing the making of such acts. It may then be argued that the enacted measure is tantamount to harmonization of national laws or regulations, even though it does not bear this imprint on the face of the measure. It would then be for the ECJ to decide whether in substance the contested measure constituted harmonization and was therefore caught by the limit in Article 2(5) TFEU. The line between a legitimate legally binding act that advances the objectives of the areas covered by this category of competence and illegitimate harmonization of national laws may nonetheless be a fine one in a particular case.

Thirdly, it should not be assumed that the consequences for the Member States of enactment of legally binding acts in these areas will necessarily be less far-reaching than harmonization. The assumption behind Article 2(5) TFEU is that harmonization of national laws is by its very nature more intrusive for Member States than other EU legal norms. This rationale may hold true, but it may not. It depends on the nature of the particular harmonization measure and the non-harmonization legally binding act.

7 ECONOMIC, EMPLOYMENT, AND SOCIAL POLICY

(A) BASIC PRINCIPLES

A division between exclusive, shared, and supporting competence can be understood, notwithstanding the difficulties mentioned above. The creation of a particular head of competence to deal with economic and employment policy however does little to enhance the symmetry of the new scheme. The Lisbon Treaty has a separate category of competence for these matters. Article 2(3) TFEU states that 'the Member States shall coordinate their economic and employment policies within arrangements as determined by this Treaty, which the Union shall have competence to provide'. The detailed rules are then set out in Article 5 TFEU.[57]

> 1. The Member States shall coordinate their economic policies within the Union. To this end, the Council shall adopt measures, in particular broad guidelines for these policies.
>
> Specific provisions shall apply to those Member States whose currency is the euro.
>
> 2. The Union shall take measures to ensure coordination of the employment policies of the Member States, in particular by defining guidelines for these policies.
>
> 3. The Union may take initiatives to ensure coordination of Member States' social policies.

The explanation for this separate category was political. There would have been significant opposition to the inclusion of these areas within shared competence, with the consequence of pre-emption of state action when the EU exercised power within this area. It is equally clear that there were those who felt that the category of supporting, coordinating, and supplementary action was too weak. This was the explanation for the creation of a separate category, and its placement after shared power, but before the category of supporting, coordinating, and supplementary action.

The boundary problems that we have seen in the preceding discussion are evident here too, particularly in relation to social policy. The difficulties in this area are especially marked, since certain aspects of social policy fall within shared competence, although it is not precisely clear which; other aspects appear to fall within the category of supporting, coordinating, and supplementary action, even though they are not within the relevant list; and there is in addition separate provision for social policy in the category being considered here. The reach of Article 5(3) TFEU and its relationship with the more detailed Treaty provisions on social policy are not clear. The most natural 'linkage' would seem to be Article 156 TFEU, which empowers the Commission to encourage cooperation between Member States and facilitate coordination of their action in all fields of social policy, albeit through soft law measures.[58]

(B) CATEGORY AND LEGAL CONSEQUENCE

The Treaty schema for competence in Article 2 TFEU is in general premised on the ascription of legal consequences for EU and Member State power as the result of coming within a particular category. Article 5 TFEU is an exception in this respect, since Article 2(3) TFEU does not spell out the legal consequences of inclusion within this category. It simply provides that the 'Member States shall coordinate their economic and employment policies within the arrangements as determined by

[57] The 'fit' between Art 2(3) and Art 5 TFEU is not perfect, insofar as the former refers to economic and employment policy, while the latter also covers social policy. There is moreover a difference in language, in that the EU is enjoined in mandatory language to coordinate economic and employment policy, whereas it is accorded discretion in relation to social policy.

[58] The wording of the respective provisions does not however fit perfectly: Art 5(3) is framed in discretionary terms, 'the Union may take initiatives', while Art 156 TFEU is drafted in mandatory language, to the effect that the 'Commission shall' encourage the relevant cooperation and coordination.

this Treaty, which the Union shall have competence to provide'. The legal consequences of inclusion within this category can therefore only be divined by considering the language of Article 5 TFEU, which is couched largely in terms of coordination, and by considering the detailed provisions that apply to these areas. The detailed provisions concerning EU power over, for example, economic policy are considered in a separate chapter.[59]

8 COMMON FOREIGN AND SECURITY POLICY AND DEFENCE

The three-pillar structure that characterized the previous Treaty has not been preserved in the Lisbon Treaty. There are nonetheless distinct rules that apply in the context of foreign and security policy, and this warrants a separate head of competence for this area. It is set out in Article 2(4) TFEU.

> The Union shall have competence, in accordance with the provisions of the Treaty on European Union, to define and implement a common foreign and security policy, including the progressive framing of a common defence policy.

The rules concerning the common foreign and security policy are set out in Title V TEU. Decision-making in this area continues to be more intergovernmental and less supranational by way of comparison with other areas of Union competence.[60] The European Council and the Council dominate decision-making, and the legal instruments applicable to CFSP are distinct from those generally applicable for the attainment of Union objectives.[61]

Suffice it to say for the present that Article 2(4) does not specify which type of competence applies in the context of the CFSP. In truth none of the categories is a good fit. It is clearly not within exclusive competence, since it is not listed in Article 3 TFEU, and in any event the substance of the CFSP simply does not accord with the idea of exclusive EU competence. Nor is it mentioned in the list of those areas that are subject to supporting, coordinating, or supplementing Member State action in Article 6 TFEU. This would seem to imply that it falls within the default category of shared competence in Article 4 TFEU, even though not mentioned in the non-exhaustive list.

The reality is however that the world of the CFSP may not readily fit within the frame of shared competence, insofar as this connotes pre-emption of Member State action when the EU has exercised its power in the area, nor does this idea cohere with Declarations appended to the Lisbon Treaty.[62] If the CFSP is regarded as within shared competence, the point made earlier concerning the need for close examination of the respective powers of the EU and Member States, in order to be clear about the nature of the power sharing, is of especial significance.

9 BROAD TREATY PROVISIONS: THE 'FLEXIBILITY' CLAUSE

The discussion thus far has been concerned with the principal categories of competence established by the Lisbon Treaty. The discussion in this and the following section focuses on two particular Treaty provisions, Articles 352 and 114 TFEU, the successor provisions to Articles 308 and 95 EC.

[59] Ch 20.
[60] Cremona (n 17).
[61] Craig (n 12) ch 10.
[62] Declarations 13 and 14 on the common foreign and security policy.

These provisions are broadly framed, and thus give the EU a potentially wide regulatory competence. Member State concern over the extensive use of these provisions was a principal factor behind Treaty reform in this area, and was reflected in the desire to ensure that EU power was contained. It is therefore important to see how far this has been achieved.

(a) ARTICLE 308 EC

Article 352 TFEU is the successor provision to Article 308 EC. It is important to understand the legal and political background to Article 308 EC in order to understand Article 352 TFEU. Article 308 EC provided that:

> If action by the Community should prove necessary to attain, in the course of the operation of the common market, one of the objectives of the Community and this Treaty has not provided the necessary powers, the Council shall, acting unanimously on a proposal from the Commission and after consulting the European Parliament, take the appropriate measures.

Article 308 was a valuable legislative power, particularly when the Community did not possess specific legislative authority in certain areas. Thus the Article was used to legitimate legislation in areas such as the environment and regional policy, before these matters were dealt with through later Treaty amendments. Weiler captures the importance of this provision and the manner in which it was interpreted.

J Weiler, The Transformation of Europe[63]

> In a variety of fields, including, for example, conclusion of international agreements, the granting of emergency food aid to third countries, and creation of new institutions, the Community made use of Article 235[64] in a manner that was simply not consistent with the narrow interpretation of the Article as a codification of implied powers doctrine in its instrumental sense. Only a truly radical and 'creative' reading of the Article could explain and justify its usage as, for example, the legal basis for granting emergency food aid to non-associated states. But this wide reading, in which all the institutions partook, meant that it would become virtually impossible to find an activity which could not be brought within the objectives of the Treaty.

Article 308 EC required that the power should be used to attain a Community objective. Given, however, the breadth of the Treaty objectives, and given also the ECJ's purposive mode of interpreting Community aims, these 'conditions' did not place a severe constraint on the Council. They were not however entirely devoid of meaning, and the ECJ on occasion held that Article 308 could not be used to legitimate Community action,[65] although in the instant case it should be acknowledged that the ECJ was probably content to reach this conclusion, thereby avoiding subjecting itself to the ultimate authority of the European Court of Human Rights.

The most problematic aspect of Article 308 EC was the condition that the Treaty had not 'provided the necessary powers',[66] and therefore whether another Treaty Article could be used instead

[63] (1991) 100 Yale LJ 2403, 2445–2446.

[64] Art 235 EEC was the predecessor provision to Art 308 EC.

[65] Opinion 2/94 *Accession of the Community to the European Human Rights Convention* [1996] ECR I–1759. Cf Opinion 2/91 *ILO Convention 170 on Chemicals at Work* [1993] ECR I–1061.

[66] Case 8/73 *Hauptzollamt Bremerhaven v Massey-Ferguson* [1973] ECR 897.

of Article 308.[67] This could be of particular significance where a specific Treaty Article provided for more extensive involvement of the European Parliament than did Article 308, which only required consultation with the EP.[68] The other situation in which the choice between Article 308 EC and a more specific Treaty Article could be significant was where there were differences in the voting rules under the respective Articles. Article 308 required unanimity in the Council, whereas many other Treaty provisions demanded only a qualified majority.

(B) ARTICLE 352 TFEU

Article 308 EC was long viewed with suspicion by those calling for a clearer delimitation of Community competences, and in particular by the German *Länder*. Various calls for reform were made before and during IGCs. This issue was placed on the post-Nice and Laeken agenda for reform of the EU. The Laeken Declaration expressly asked whether Article 308 EC ought to be reviewed, in light of the twin challenges of preventing the 'creeping expansion of competences' from encroaching on national and regional powers, while allowing the EU to 'continue to be able to react to fresh challenges and developments and … to explore new policy areas'.[69] The Working Group on Complementary Competences recognized the concerns about the use of Article 308. The Group nonetheless recommended the retention of the Article in order that it could provide for flexibility in limited instances.[70] The flexibility clause is now enshrined in Article 352 TFEU:

> 1. If action by the Union should prove necessary, within the framework of the policies defined in the Treaties, to attain one of the objectives set out in the Treaties, and the Treaties have not provided the necessary powers, the Council, acting unanimously on a proposal from the Commission and after obtaining the consent of the European Parliament, shall adopt the appropriate measures. Where the measures in question are adopted by the Council in accordance with a special legislative procedure, it shall also act unanimously on a proposal from the Commission and after obtaining the consent of the European Parliament.
>
> 2. Using the procedure for monitoring the subsidiarity principle referred to in Article 5(3) of the Treaty on European Union, the Commission shall draw national Parliaments' attention to proposals based on this Article.
>
> 3. Measures based on this Article shall not entail harmonisation of Member States' laws or regulations in cases where the Treaties exclude such harmonisation.
>
> 4. This Article cannot serve as a basis for attaining objectives pertaining to the common foreign and security policy and any acts adopted pursuant to this Article shall respect the limits set out in Article 40, second paragraph, of the Treaty on European Union.

Article 352(1) TFEU is framed broadly in terms of the 'policies defined in the Treaties', with the exception of the CFSP. It can therefore serve as the basis for competence in almost all areas of EU law. The unanimity requirement means however that it will be more difficult to use this power in an enlarged EU, and Article 352 TFEU also requires the consent of the European Parliament, as opposed to mere consultation, as was previously the case under Article 308 EC. It is also important to recognize

[67] Case 45/86 *Commission v Council (Tariff Preferences)* [1987] ECR 1493; Case 165/87 *Commission v Council* [1988] ECR 5545; Case C–295/90 *European Parliament v Council* [1992] ECR I–4193; Case C–209/97 *Commission v Council* [1999] ECR I–8067; Case C–377/98 *Netherlands v Parliament and Council* (n 8).

[68] Case 45/86 *Commission v Council* [1987] ECR 1493; Case C–350/92 *Spain v Council* [1995] ECR I–1985; Case C–271/94 *European Parliament v Council (Re the Edicom Decision)* [1996] ECR I–1689.

[69] Laeken Declaration (n 4) 22.

[70] CONV 375/1/02, Final Report of Working Group V on Complementary Competencies, Brussels, 4 Nov 2002, 14–18.

that the need for recourse to this power will diminish, given that the Lisbon Treaty created a legal basis for action in the areas where Article 308 EC had previously been used.[71] The German Federal Constitutional Court was nonetheless concerned about the scope of Article 352 and stipulated that the exercise of any such competence constitutionally required ratification by the German legislature.[72]

The conditions in Article 352(2)–(4) are novel. The import of Article 352(2) is not entirely clear. Weatherill has argued that uniquely within the Lisbon Treaty it provides national Parliaments with the opportunity to contest the existence of competence when legislative action is based on the flexibility clause, as opposed to other contexts where national parliaments can simply challenge on grounds of subsidiarity.[73] This may be so. It does not however sit comfortably with the wording of Article 352(2), which is framed in terms of subsidiarity and is not suggestive of national parliamentary power to challenge the existence of competence. The more natural interpretation is that because the flexibility clause entails an exceptional use of EU legislative power, the Commission therefore has an additional obligation, viz. to draw this to the attention of national parliaments, in order that they may contest it on the grounds of subsidiarity.

10 BROAD TREATY PROVISIONS: THE HARMONIZATION CLAUSE

The changes made by the Lisbon Treaty to what is now Article 352 TFEU, in particular the fact that express legislative competence is granted in the areas where the Article was used in the past, means that this Article is likely to be less problematic in the future than it was previously.

The Lisbon Treaty has, by way of contrast, done little to alleviate problems of 'competence creep' in the terrain covered by Article 114 TFEU, which has not been changed. It is the main Treaty Article used to enact harmonization measures.

> 1. Save where otherwise provided in the Treaties, the following provisions shall apply for the achievement of the objectives set out in Article 26. The European Parliament and the Council shall, acting in accordance with the ordinary legislative procedure and after consulting the Economic and Social Committee, adopt the measures for the approximation of the provisions laid down by law, regulation or administrative action in Member States which have as their object the establishment and functioning of the internal market.

Concerns about over extensive use of this legislative competence arose because it was felt that the EU was too readily assuming power to harmonize national laws based on mere national divergence, with scant attention being given to the impact, if any, of that divergence on the functioning of the internal market.[74] The ECJ's ruling in the *Tobacco Advertising* case[75] appeared to signal some tightening up in this respect, but subsequent case law[76] revealed some softening of the ECJ's position on this issue. It is now more willing to find that regulatory competence exists because divergent national laws constitute

an impediment to the functioning of the internal market and EU harmonization contributes to the elimination of obstacles to the free movement of goods, or to the freedom to provide services, or to the removal of distortions of competition.

Impact Assessment[77] can, however, be used both politically and legally as a method of checking whether there really is a problem that requires harmonization at EU level.[78] Impact assessment is a set of steps to be followed when policy proposals are prepared, alerting political decision-makers to the advantages and disadvantages of policy options by assessing their potential impacts. The results of this process are summarized and presented in an Impact Assessment Report.[79] This does not replace political decision-making, which remains the preserve of the College of Commissioners. A typical Impact Assessment will address a range of issues including: the nature and scale of the problem; the views of stakeholders; whether the EU should be involved; the objectives of any such involvement; the main policy options for reaching these objectives, including their relative effectiveness/efficiency; and the likely economic, social, and environmental impacts of those options.

The Impact Assessment is not some panacea that will magically dispel concerns as to 'competence creep' or 'competence anxiety'. It is nonetheless central to addressing these concerns. The Impact Assessment Report considers the very issues that are pertinent to this inquiry. This includes the justification for EU action in terms of, for example, the need for harmonization because of the impact of diverse national laws on the functioning of the internal market. It also includes the subsidiarity calculus, which is an explicit step in the overall Impact Assessment process,[80] with a specific section devoted to verification of the EU's right of action and justification thereof in terms of subsidiarity.[81] The Impact Assessment strategy therefore constitutes a framework within which to address concerns as to competence anxiety. The strategy is not perfect, but it has been improved since its inception, and assessments, both official[82] and academic,[83] have generally been positive. If the data in a particular Impact Assessment Report are felt to be wanting then we should press for further improvement and not be satisfied with exiguous or laconic argument.

The very fact that there is a framework within which these issues are now considered is however a positive step, which facilitates scrutiny as to the nature of the justificatory arguments and their adequacy. This should in turn facilitate judicial review. The ECJ should be willing to consider the adequacy of the reasoning for EU legislative action, and to look behind the formal legislative preamble to the arguments that underpin it derived from the Impact Assessment.[84] The ECJ should be properly mindful of the Commission's expertise as evinced in the Impact Assessment. It should also be cognizant of the precepts in the Treaty, which in the case of Article 114 TFEU condition EU intervention on proof that approximation of laws is necessary for the functioning of the internal market. If the justificatory reasoning to this effect in the Impact Assessment is wanting then the ECJ should invalidate the relevant instrument, and thereby signal to the political institutions that the precepts in the Treaty are to be taken seriously.

11 SUBSIDIARITY

(A) PRE-LISBON

Closely linked to the question of the 'existence' of competence is the principle of subsidiarity, which is intended to regulate the 'exercise' of competence. Subsidiarity was introduced in the Maastricht Treaty, and was intended to curb the 'federalist' leanings of the Community. The pre-Lisbon formulation was contained in Article 5 EC:

> The Community shall act within the limits of the powers conferred upon it by this Treaty and of the objectives assigned to it therein.
>
> In areas which do not fall within its exclusive competence, the Community shall take action, in accordance with the principle of subsidiarity, only if and in so far as the objectives of the proposed action cannot be sufficiently achieved by the Member States and can therefore, by reason of the scale or effects of the proposed action, be better achieved by the Community.
>
> Any action by the Community shall not go beyond what is necessary to achieve the objectives of this Treaty.

The requirement in the first paragraph of Article 5 affirmed that the Community only has competence within the areas in which it has been given power. Article 5 also made it clear that subsidiarity would have to be considered only in relation to areas which did not fall within the Community's exclusive competence, although it was in reality taken into account in relation to areas that came within the Community's exclusive competence. The problem was that pre-Lisbon there was no simple criterion for determining the scope of the Community's exclusive competence, since the Treaty was not framed in those terms. The Commission took a broad view of exclusive competence,[85] and commentators differed considerably on the issue.[86]

The subsidiarity principle had three components: the Community was to take action only if the objectives of that action could not be sufficiently achieved by the Member States; the Community could better achieve the action, because of its scale or effects; if the Community did take action then this should not go beyond what was necessary to achieve the Treaty objectives. The first two parts of this formulation entailed what the Commission termed a test of comparative efficiency,[87] in the sense of determining whether it was better for action to be taken by the Community or the Member States, while the third part of the formulation brought in a proportionality test.

The 1993 Inter-institutional Agreement on Procedures for Implementing the Principle of Subsidiarity required all three institutions to have regard to the principle when devising Community legislation. This was re-confirmed by the Protocol on the Application of the Principles of Subsidiarity and Proportionality attached to the Amsterdam Treaty,[88] which set out in more detail the subsidiarity calculus.

The idea that matters should be dealt with at the level closest to those affected is fine in principle, but there were many areas in which the comparative efficiency calculus favoured Community action, since the realization of the Community objectives often demanded Community action to ensure the

uniformity of general approach that was important for attainment of a common market.[89] There were moreover difficulties with the approach in the pre-Lisbon scheme.

A Estella, The EU Principle of Subsidiarity and its Critique[90]

> The truth of the matter is that attempting to define *ex ante* criteria of a general and abstract character for the purpose of limiting central intervention stands little hope of success. The reasons for this limitation are functional and can be found in the nature of modern regulatory problems. The functional interconnection between regulatory areas . . . makes the task of establishing clear dividing lines difficult. Even in those areas in which there seem to be clear reasons in favour of national, or even regional or local, regulation . . . it will always be possible to argue that due to the close relationship between these areas and the development of the single market, some Community intervention will always be necessary.

The very existence of Article 5 EC nonetheless had an impact on the existence and form of Community action. The Commission considered whether action really was required at Community level,[91] and if this was so it would often proceed through directives rather than regulations.

(B) POST-LISBON

(i) *Subsidiarity Principle*

The subsidiarity principle has been retained in the Lisbon Treaty. It distinguishes between the existence of competence and the use of such competence, the latter being determined by subsidiarity and proportionality.[92] The principles are embodied in Article 5(3)–(4) TEU:[93]

> 3. Under the principle of subsidiarity, in areas which do not fall within its exclusive competence, the Union shall act only if and insofar as the objectives of the proposed action cannot be sufficiently achieved by the Member States, either at central level or at regional and local level, but can rather, by reason of the scale or effects of the proposed action, be better achieved at Union level.
>
> The institutions of the Union shall apply the principle of subsidiarity as laid down in the Protocol on the application of the principles of subsidiarity and proportionality. National Parliaments ensure compliance with the principle of subsidiarity in accordance with the procedure set out in that Protocol.
>
> 4. Under the principle of proportionality, the content and form of Union action shall not exceed what is necessary to achieve the objectives of the Treaties.
>
> The institutions of the Union shall apply the principle of proportionality as laid down in the Protocol on the application of the principles of subsidiarity and proportionality.

The Lisbon Treaty contains a Protocol on the Application of the Principles of Subsidiarity and Proportionality,[94] which should be read in tandem with the Protocol on the Role of National

[94] Protocol (No 2) On the Application of the Principles of Subsidiarity and Proportionality.

Parliaments in the EU.[95] The Subsidiarity Protocol applies to only draft legislative acts,[96] and does not cover delegated or implementing acts. It is possible that a detailed delegated act might be felt to infringe subsidiarity, but the Protocol provides no mechanism for checks by national parliaments on such measures.

(ii) *Subsidiarity Calculus*

The Subsidiarity Protocol imposes an obligation on the Commission to consult widely before proposing legislative acts.[97] The Commission must provide a detailed statement concerning proposed legislation so that compliance with subsidiarity and proportionality can be appraised. The statement must contain some assessment of the financial impact of the proposals, and there should be qualitative and, wherever possible, quantitative indicators to substantiate the conclusion that the objective can be better attained at Union level.[98] The Commission must submit an annual report on the application of subsidiarity to the European Council, the European Parliament, the Council, and to national parliaments.[99] The ECJ has jurisdiction to consider infringement of subsidiarity under Article 263 TFEU, in actions brought by the Member States, or 'notified by them in accordance with their legal order on behalf of their national Parliament or a chamber of it'.[100]

(iii) *Enhanced Role for National Parliaments*

The most important innovation in the Protocol on Subsidiarity is the enhanced role accorded to national parliaments. The Commission must send all legislative proposals to the national parliaments at the same time as to the Union institutions. The national parliaments must also be provided with legislative resolutions of the EP, and positions adopted by the Council.[101] The Protocol provides for varying responses from the EU institutions depending on the number of national parliaments that voice subsidiarity concerns about the proposed legislation.

A national parliament or Chamber thereof may, within eight weeks, send the Presidents of the Commission, European Parliament, and Council a reasoned opinion as to why it considers that the proposal does not comply with subsidiarity.[102] The European Parliament, Council, and Commission must take this opinion into account.[103]

Where non-compliance with subsidiarity is expressed by national parliaments that represent one-third of all the votes allocated to such Parliaments, the Commission must review its proposal.[104] The Commission, after such review, may decide to maintain, amend, or withdraw the proposal, giving reasons for the decision.[105]

Where a measure is made in accord with the ordinary legislative procedure, and at least a simple majority of votes given to national parliaments signals non-compliance with subsidiarity, then the proposal must once again be reviewed, and although the Commission can decide not to amend it, the Commission must provide a reasoned opinion on the matter, and this can, in effect, be overridden by

the European Parliament or the Council. Thus the EP acting by a majority of votes cast, or 55 per cent of members of the Council, can decide that the legislative proposal is not compatible with subsidiarity and that it should not be given further consideration.

It should however be noted that while the Protocol imposes obligations on the Commission to ensure compliance with the principles of subsidiarity and proportionality, national parliaments are afforded a role only in relation to the former and not the latter. The reasoned opinion submitted by the national parliament must relate to subsidiarity. This is regrettable, as Weatherill rightly notes,[106] since it is difficult to disaggregate the two principles, and insofar as one can do so there is little reason why national parliaments should not be able to proffer a reasoned opinion on proportionality as well as subsidiarity.

(iv) *Political Control: Evaluation*

It remains to be seen how subsidiarity operates in practice. It is clear that there will be many areas in which the comparative efficiency calculus in Article 5(3) TFEU favours Union action, more especially in an enlarged EU. It is equally clear that subsidiarity has impacted on the form of Union action. If EU action is required, the Commission will often proceed through directives rather than regulations, and there has been a greater use of guidelines and codes of conduct.

Time will tell how far the new provisions in the Protocol according greater power to national parliaments affect the incidence and nature of EU legislation. Much will depend on the willingness of national parliaments to devote the requisite time and energy to the matter. The national parliament has to submit a reasoned opinion as to why it believes that the measure infringes subsidiarity. It will have to present reasoned argument as to why the Commission's comparative efficiency calculus is defective. This may not be easy. It will be even more difficult for the requisite number of national parliaments to present reasoned opinions in relation to the same Union measure so as to compel the Commission to review the proposal. The Commission is nonetheless likely to take seriously any such reasoned opinion, particularly if it emanates from a larger Member State.[107]

The tension between desire to make subsidiarity a reality and the need to address problems at the EU level in order to achieve its overall objectives is, however, ever present, as is evident from the extract by the Commission President.

JM Barroso, Political Guidelines for the Next Commission[108]

We must kill off the idea that the Member States and the EU level are rivals. Everyone should be working to the same goal—to secure the best results for citizens. Too often, mistrust has been the cause of failings in our system: it contributed to the shortcomings in our system of financial regulation exposed so brutally last year. The question is how best to improve this. That means an effective application of the principle of subsidiarity.

For me, subsidiarity is the translation of a democratic principle, part of a very practical doctrine, aimed at making public policy work to best effect in a Union built on solidarity, and at the most appropriate level. The EU works best when it focuses on its core business. I want to concentrate our limited resources on where we can have most effect, and where we can bring most added value.

At the same time, the continental scale of Europe and the scale of our ambitions points inevitably towards taking the wide view, looking at the bigger picture. This does not mean that the EU always has

[106] Weatherill (n 1).

to make new laws—the Treaties mean we can make laws where this is needed, but they also inspire us to spark debate and spread ideas across the whole vision set out by our founding fathers.

I want to be rigorous about where we need to have common rules and where we need only a common framework. We have not always got the balance right, and we have not always thought through the consequences of diversity in an EU of 27…

The Lisbon Treaty puts in place new procedures to allow national parliaments to intervene if they have concerns about subsidiarity. But more importantly, we should develop a much clearer doctrine of how we decide when action needs to be taken at EU level, where the balance should lie between EU-level tools and national level tools, and what expectations should be placed on Member States implementing EU policy in their own countries.

(v) *Legal Control: Evaluation*

The Protocol provides for recourse to the ECJ for infringement of subsidiarity under Article 263 TFEU, in an action brought by a Member State. The Protocol also provides for the action to be notified by the State on behalf of the national parliament, and it remains to be seen how this works. There may be instances where the Member State has agreed in the Council to the EU measure, which the national parliament then regards as infringing subsidiarity. This is the rationale for the provision allowing the Member State to notify the action on behalf of its parliament. This still leaves open interesting questions as to how such a case will be argued. If the Member State has voted for the legislative act in the Council it will be odd for it then to contend before the Court that the measure violates subsidiarity. If the legal action is to be a reality the Member State will not simply have to notify the action on behalf of its parliament, but also allow the parliament through its chosen legal advocate to advance its arguments that the measure does not comply with subsidiarity, even if the Member State does not agree with those arguments.

This still leaves open the central issue, which is the intensity of the judicial review. The indications are that the ECJ will not lightly overturn EU action on the ground that it does not comply with subsidiarity.

This is apparent in *procedural* terms from *Germany v European Parliament and Council*.[109] The ECJ held that the duty to give reasons did not require that Community measures contain an express reference to the subsidiarity principle. It was sufficient that the recitals to the measure made it clear why the Community institutions believed that the aims of the measure could best be attained by Community action.

The difficulty of overturning a measure in *substantive* terms is apparent from the *Working Time Directive* case.[110] The UK argued that the Directive infringed subsidiarity, since it had not been shown that action at Community level would provide clear benefits compared with action at national level. The ECJ disposed of the argument briskly. It was, said the Court, the responsibility of the Council under Article 118a EEC[111] to adopt minimum requirements to contribute to improvement of health and safety. When the Council found it necessary to improve the existing level of protection and to harmonize the law in this area while maintaining the improvements already made, achievement of that objective necessarily presupposed Community-wide action. A similarly 'light' judicial approach to subsidiarity review is evident in other cases.[112]

[109] Case C–233/94 *Germany v European Parliament and Council* (n 6) [26]–[28].

[110] Case C–84/94 *United Kingdom v Council* (n 6) [46]–[47], [55].

[111] Now Art 154 TFEU.

[112] Case C–377/98 *Netherlands v Parliament and Council* (n 8); Cases C–154–155/04 *The Queen, on the application of Alliance for Natural Health and Nutri-Link Ltd* v *Secretary of State for Health* [2005] ECR I–6451, [99]–[108]; Case C–491/01 *British American Tobacco* (n 8) [177]–[185]; Case C–103/01 *Commission v Germany* [2003] ECR I–5369, [46]–[47]; Case T–168/01 *GlaxoSmithKline Services Unlimited v Commission* [2006] ECR II–2969, [201]–[202]; Case T–326/07 *Cheminova A/S v Commission* [2009] ECR II–2685, [250]–[261]; Case C–58/08 *Vodafone* (n 84) [72]–[80].

There are undoubtedly difficulties with judicial review in this area. If the ECJ continues with very light touch review, it will be open to the criticism that it is effectively denuding the obligation in Article 5(3)–(4) of all content. If, by way of contrast, the ECJ takes a detailed look at the evidence underlying the Commission's claim it will have to adjudicate on what may be a complex socio-economic calculus concerning the most effective level of government for different regulatory tasks.

The difficulty of adjudicating on the substantive issue of comparative efficiency would nonetheless be alleviated if the Union courts were to require more from the Commission in procedural terms. The obligation to give reasons could be used to require the Commission to disclose the qualitative and quantitative data that are meant to inform its reasoning pursuant to the Protocol. This would not solve all problems of substantive review, but would provide the EU Courts with more to go on, as compared to their present reliance on the exiguous reasoning contained in the Preamble to the contested measure.

The development of Impact Assessment[113] is significant in this context. It includes the subsidiarity calculus,[114] with a specific section devoted to verification of the EU's right of action in terms of subsidiarity.[115] The very fact that there is a framework within which these issues are considered is a positive step, which facilitates scrutiny as to the nature of the justificatory arguments and their adequacy. This should in turn facilitate judicial review. If the justification for EU action contained in the Impact Assessment appears merely formal, scant, or exiguous then the ECJ should not hesitate so to conclude, thereby indicating that the enhanced role accorded to subsidiarity in the Lisbon Treaty will be taken seriously.

(vi) *Subsidiarity: Evaluation*

Subsidiarity has always been an emotive subject, ever since its introduction in the Maastricht Treaty. This is true just as much for academics as for political players involved with the EU. Thus legal academics have criticized, with justification, the low intensity judicial review undertaken by EU Courts when dealing with subsidiarity claims. There have been more far-reaching critiques, such as that by Davies,[116] who argued that the subsidiarity inquiry is misplaced, and that the focus should rather be on whether the challenged EU legislation is disproportionate by intruding too far into Member State values in relation to the objective sought to be attained by the EU legislation. Space precludes detailed analysis of these arguments.[117] The following points should nonetheless be borne in mind when conducting a legal evaluation of subsidiarity.

First, there have been few legal challenges based on subsidiarity since its introduction into the Treaty, fewer than twenty, which means roughly one per year. The real figure is actually lower than this, since some of the cases duplicate challenges made in other cases;[118] in others the challenge was clearly misplaced, given the nature of the Treaty provisions or EU regulatory scheme;[119] while in yet others the Member State adduced no evidence to substantiate the subsidiarity argument.[120] This leaves just over ten cases in nearly twenty years where has been a real subsidiarity challenge. There have been thousands of regulations, directives, and decisions enacted during this period, with just over ten subject to legal challenge. To put this figure in perspective, there will often be more than ten legal challenges in a month based on some other ground of judicial review.

[118] Case T–326/07 *Cheminova* (n 112).
[119] Case T–65/98 *Van den Bergh Foods Ltd v Commission* [2003] ECR II–4653, [197]–[199]; Case T–420/05 *Vischim Srl v Commission* [2009] ECR II–3841, [221]–[223]; Case C–110/03 *Belgium v Commission* [2005] ECR I–2801, [56]–[58]; Case T–339/04 *France Télécom SA v Commission* [2007] ECR II–521, [77]–[82].
[120] Case C–64/05 P *Sweden v Commission* [2007] ECR I–11389, [74].

Secondly, in a number of the 'real' cases the subsidiarity challenge was opposed by other Member States, who argued that the contested EU legislation was consistent with the subsidiarity principle. Any idea that Member States take a uniform view concerning the application of subsidiarity in a particular case is therefore untenable. It should also be recognized that some subsidiarity challenges have been brought by private parties and received no support from any Member State. This does not mean that such challenges were therefore misplaced. It does mean that no Member State supported the claim that the relevant EU legislation infringed subsidiarity.

Thirdly, it is by no means clear that the ECJ decisions in the real subsidiarity cases were wrong, or that they would have been different if judicial review had been more intensive. It is too easy to reason from the premise that judicial review *should* be more searching, to the conclusion that the result *would* have been different. The premise is correct, the conclusion is wrong. The result might be different, it might not. Thus even where the reasoning of the Advocate General was considerably more searching than that of the Court, as exemplified by Advocate General Maduro's Opinion in *Vodafone*,[121] the result was the same. The reality is that whether a particular judicial decision was right or wrong can only be determined by looking closely at the contested regulatory scheme and deciding whether it 'passed' the subsidiarity criterion. When judged from this perspective it is not self-evident that any of the challenged regulations should have fallen because of subsidiarity.

Finally, it might be argued in the light of the above that the existing subsidiarity principle is defective, that the focus should be on whether the EU norm violates proportionality by infringing too greatly on Member State values, and that if this were so then more cases would be brought by Member States and more might be successful.[122] Space precludes detailed examination of this hypothesis.[123] Suffice it to say the following for present purposes. It is not clear that any of the existing cases would or should have been decided differently even if this type of analysis had been applied by the EU Courts. There are moreover problems with this form of judicial scrutiny in terms of positive law, practical application, and at the conceptual level.

12 CONCLUSION

i. EU competence is the result of the interaction of four variables: Member State choice as to the scope of EU competence, as expressed in Treaty revisions; Member State and, since the SEA, European Parliament acceptance of legislation that fleshed out the Treaty Articles; the jurisprudence of the EU Courts; and decisions taken by the institutions as to how to interpret, deploy, and prioritize the power accorded to the EU. We should therefore be cautious about the assumption that the 'competence problem' was the result primarily of some unwarranted arrogation of power by the EU to the detriment of states' rights.

ii. There were two principal objectives driving reform in this area: clarity as to the scope of EU competence and containment of EU power.

iii. The tripartite division in the Lisbon Treaty has gone some way towards greater clarity. The categories of exclusive competence, shared competence, and competence to support, coordinate, or supplement Member State action are helpful in this respect. So too is the fact that the Lisbon Treaty specifies the legal consequences of assignment of a subject matter area to a particular category. There are, however, limits to what can be achieved through categorization. There will necessarily be problems of demarcating the boundaries of each category.

[121] Case C–58/08 *Vodafone* (n 84) [27]–[36].
[122] Davies (n 116).
[123] Craig (n 117).

iv. The category of exclusive competence is relatively narrow insofar as it relates to areas that are stipulated as falling within this head of competence, but the scope of exclusive competence in relation to external relations is broader and problematic.

v. Shared competence is the default position in the Lisbon Treaty. The broad range of areas that fall within shared competence means however that the informed observer can determine the reality of this divide only by looking at the detailed Treaty provisions that govern the relevant area. The nature of the divide will differ, often significantly, as between different areas that fall within the remit of shared competence. It also means that the informed observer who wishes to understand what the Member State is allowed to do in any such area will have to be acutely aware of whether and how the EU has exercised its power, since the Member States lose their competence to the extent that the EU has exercised its competence.

vi. The recognition in the Lisbon Treaty of the category where the EU supports, coordinates, or supplements Member State action is to be welcomed. There are boundaries on EU competence in these areas, through the proscription on harmonization. The Treaty nonetheless allows persuasive soft law and binding hard law to achieve the objectives spelt out for each area. Such measures do not formally supersede Member State competence, but the legal reality is that such legally binding acts made by the EU will constrain Member State competence. The informed observer who wishes to understand the division between EU competence and that of the Member States will therefore have to be cognizant of the specific Treaty provisions that govern each of these areas, and of any EU legislation made pursuant thereto.

vii. The other principal concern driving reform in this area was the desire to contain EU power. This concern was based in large part on the broad use of what are now Articles 114 and 352 TFEU. The Lisbon Treaty renders problems based on Article 352 TFEU less likely in the future: it requires unanimity in the Council; consent from the European Parliament; that national parliaments are specifically alerted to use of this provision; and the EU has been given specific legislative competence in the areas where Article 308 EC was used in the past. The Lisbon Treaty will, by way of contrast, do little to alleviate problems of 'competence creep' in the terrain covered by Article 114 TFEU. Impact Assessment can however be used both politically and legally as a method of checking whether there really is a problem that requires harmonization at EU level.

viii. The strengthening of the role of national parliaments in relation to subsidiarity is to be welcomed. It remains to be seen how effective this is in practice. The reality is that the Commission is likely to take seriously subsidiarity concerns voiced by Member States, especially the more powerful, and this is so even if the number of states voicing such concerns does not reach the levels to trigger the response mechanisms in the Protocol on subsidiarity and proportionality.

INSTRUMENTS AND THE HIERARCHY OF NORMS

1 CENTRAL ISSUES

i. This chapter examines two related issues: the EU's legal and non-legal instruments and the hierarchy of norms.

ii. The EU has a number of legal and non-legal instruments that are used to attain Union objectives. The principal legal instruments are regulations, directives, and decisions. These will often be used in conjunction with each other. The foundational provision in an area may, for example, be a directive, and regulations and decisions may supplement it. The foundational provision may alternatively take the form of a regulation, which is then supplemented by further regulations, directives, or decisions. The EU also has numerous soft law methods for developing Union policy. Formal and informal law will commonly be used together to attain EU goals in any particular area.

iii. The Treaties lay down a number of conditions for the legality of such instruments. Thus reasons must be given for all legal acts, and there are requirements concerning publication and signature.

iv. The hierarchy of norms is the second issue addressed in this chapter. This phrase captures the idea that in a legal system there will be a vertical ordering of legal acts, with those lower down the hierarchy being subject to legal acts of a higher status. Prior to the Lisbon Treaty a hierarchy of norms could be discerned. There were, for example, 'primary' regulations, directives, or decisions that laid the legal foundations for policy in a particular area, and these would be supplemented by 'secondary' regulations, directives, or decisions that dealt in greater detail with an issue covered in the primary norm. The secondary norms were clearly subject to the primary norms, and hence lower in the hierarchy.

v. The framers of the Lisbon Treaty felt, however, that it was desirable in terms of simplicity, democratic legitimacy, and separation of powers to have a more definite hierarchy of norms than had existed hitherto. There are now five principal tiers to the hierarchy of norms in EU law, which are, in descending order: the constituent Treaties and Charter of Rights; general principles of law; legislative acts; delegated acts; and implementing acts.

vi. The subsequent discussion will elaborate the meaning of these different tiers that constitute the hierarchy of norms. It will be seen that there are however considerable problems with the new Lisbon regime, in particular in relation to the distinction between delegated and implementing acts. It is only when these problems have been understood that one can decide whether the Lisbon objectives of simplicity, democratic legitimacy, and separation of powers have been attained.

2 INSTRUMENTS

It is important to understand the different types of EU instrument. Article 288 TFEU is the foundational provision:

> To exercise the Union's competences, the institutions shall adopt regulations, directives, decisions, recommendations and opinions.
>
> A regulation shall have general application. It shall be binding in its entirety and directly applicable in all Member States.
>
> A directive shall be binding, as to the result to be achieved, upon each Member State to which it is addressed, but shall leave to the national authorities the choice of form and methods.
>
> A decision shall be binding in its entirety. A decision which specifies those to whom it is addressed shall be binding only on them.
>
> Recommendations and opinions shall have no binding force.

(A) INTRODUCTION

The more particular meaning of these legal acts will be examined below. It is however important to be aware of five points that are relevant to all these instruments.

First, there is no formal hierarchy between these provisions. It should not therefore be thought that regulations are somehow 'superior' to directives, or vice versa. It is equally important to understand that regulations, directives, and decisions will often be connected in the development of EU policy in a particular area. There may, for example, be a 'foundational' regulation, and directives or decisions may be made pursuant to this. The 'foundational' provision may equally be a directive or a decision.

Secondly, regulations, directives, and decisions may, as will be seen below, take the form of legislative, delegated, or implementing acts. The regulations, directives, and decisions do not alter their nature, but their place within the overall hierarchy of norms will depend upon whether they are legislative, delegated, or implementing acts.

Thirdly, the Treaties may specify the type of instrument to be used, but will often not do so. Article 296 TFEU states that where the Treaties do not specify the type of act to be adopted, the institutions shall select it on a case-by-case basis, in compliance with the applicable procedures and with the principle of proportionality.

Fourthly, Article 296 TFEU imposes an obligation to give reasons[1] for legal acts, and this includes reference to any proposals, initiatives, recommendations, requests, or opinions required by the Treaties.

Finally, Article 297 TFEU specifies rules for the making of the legal acts in Article 288. Thus where a regulation, directive, or decision takes the form of a legislative act adopted under the ordinary legislative procedure it must be signed by the Presidents of the European Parliament and the Council. Legislative acts adopted under a special legislative procedure are signed by the President of the institution which adopted them. Legislative acts must be published in the Official Journal and enter into force on the date specified therein or, in the absence thereof on the twentieth day following that of their publication.

Where the regulation, directive, or decision is a non-legislative act and does not specify to whom it is addressed, it is signed by the President of the institution which adopted it. Regulations and directives addressed to all Member States, as well as decisions which do not specify to whom they are addressed, must be published in the Official Journal. They enter into force on the date specified or,

[1] Ch 15.

in the absence thereof, on the twentieth day following publication. Other directives, and decisions which specify to whom they are addressed, must be notified to the addressee and take effect upon such notification.

(B) REGULATIONS

Regulations are binding in their entirety and directly applicable in all Member States. It is common to think of regulations as akin to legislation made by Member States. There is some force in this analogy, since regulations are measures of general application, applicable to all Member States. The legal reality in the post-Lisbon world is, however, that regulations can, as will be seen below, take the form of legislative, delegated, or implementing acts.

Regulations are said by Article 288 to be 'directly applicable'. Commentators have debated the meaning of this term.[2] We cannot know the intent of those who drafted the Treaty in the absence of the *travaux préparatoires*. It is unclear whether the Treaty framers meant the phrase 'directly applicable' to connote the idea that individuals have rights, which they can enforce through national courts. The ECJ has on occasion interpreted directly applicable in this manner.[3]

The term does, however, have another meaning, which is concerned with the way in which international norms enter national legal systems. In some Member States, notably those which have a dualist view of the relationship between national and international law, this must be done either by the national system transforming the measure into national law, or by a shorter national act adopting the relevant international act. These methods would be very cumbersome when there are many such measures to be transferred into national legal systems. The EU enacts thousands of regulations. If each regulation had to be separately incorporated into each national legal system before it could be legally effective then the EU would grind to a halt. The phrase 'directly applicable' obviates this difficulty. It signifies that regulations are part of the national legal systems, without the need for transformation or adoption by separate national legal measures.

Member States may nonetheless need to modify their law in order to comply with a regulation, or they may need to pass consequential legal measures in order to give full effect to what is demanded by the regulation. This does not alter the fact that the regulation itself has legal effect in the Member States independently of any national law, and Member States should not pass measures that conceal the nature of the EU regulation.

Case 34/73 **Variola v Amministrazione delle Finanze**
[1973] ECR 981

The ECJ was asked by a national court whether the provisions of a regulation could be introduced into the legal order of a Member State by internal measures which reproduced the contents of the Community provision 'in such a way that the subject-matter is brought under national law'.

THE ECJ

10. The direct application of a Regulation means that its entry into force and its application in favour of those subject to it are independent of any measure of reception into national law.

[2] J Steiner, 'Direct Applicability in EEC Law—A Chameleon Concept' (1982) 98 LQR 229; A Dashwood, 'The Principle of Direct Effect in European Community Law' (1978) 16 JCMS 229.

[3] Ch 7.

> By virtue of the obligations arising from the Treaty and assumed on ratification, Member States are under a duty not to obstruct the direct applicability inherent in Regulations and other rules of Community law.
>
> Strict compliance with this obligation is an indispensable condition of simultaneous and uniform application of Community Regulations throughout the Community.
>
> 11. More particularly, Member States are under an obligation not to introduce any measure which might affect the jurisdiction of the Court to pronounce on any question involving the interpretation of Community law or the validity of an act of the institutions of the Community, which means that no procedure is permissible whereby the Community nature of a legal rule is concealed from those subject to it.
>
> Under Article 177 of the Treaty in particular the jurisdiction of the Court is unaffected by any provisions of national legislation which purport to convert a rule of Community law into national law.

An individual may allege that a measure which is called a regulation is really a decision. This arose most commonly when an individual sought to annul a measure because what was Article 230 EC limited the ability of individuals to challenge measures in the form of regulations. The test of whether a measure really is a regulation is one of substance, and not form. The fact that the contested act is called a regulation is not therefore conclusive.[4]

(c) DIRECTIVES

Directives differ from regulations in two important ways. They do not have to be addressed to all Member States, and they are binding as to the end to be achieved while leaving some choice as to form and method to the Member States. The ability to act through directives as well as regulations gives the EU valuable flexibility. The direct applicability of regulations means that they have to be capable of being 'parachuted' into the legal systems of all the Member States just as they are. Normally every 't' must be crossed, and every 'i' must be dotted in regulations, since Member States must not tamper with them. If this were the only way to develop EU policy, the legislative process would work very slowly. There might be areas where it was difficult to devise regulations with the requisite specificity, which were suited to immediate impact in the Member States, more especially because the Member States have differing legal systems, and there are variations in the political, administrative, and social arrangements within the Member States.

Directives are particularly useful when the aim is to harmonize the laws within a certain area, or to introduce complex legislative change. This is because discretion is left to Member States as to how the directive is to be implemented. It should not however be thought that directives are vague. They are not. The ends which Member States have to meet will be set out in considerable detail. The force of directives has been increased by ECJ rulings. The Court held that directives have direct effect, enabling individuals to rely on them, at least in actions against the state,[5] and that a Member State can be liable in damages for non-implementation of a directive.[6]

(d) DECISIONS

Article 288 TFEU states that a decision is binding in its entirety, and a decision which specifies those to whom it is addressed is binding only on them. This captures the duality in the use of decisions as legal acts prior to the Lisbon Treaty.

[4] Ch 14.
[5] Ch 7.
[6] Ch 8.

In most instances decisions were used as binding legal acts in relation to specific addressees, as exemplified by the many decisions made in the context of competition and state aids. Some decisions were however of a more generic nature, setting out the legal rules to govern an inter-institutional issue such as Comitology, or providing the legal foundation for Community programmes.[7]

The English version of Article 288 is capable of covering both types of decision. The German and Dutch wording however signifies the generic rather than the individualized version of decision.[8] It remains to be seen whether the individualized sense of decision will subsist. It would be very odd if it did not, since it has been a staple and important form of legal act ever since the inception of the EEC.

(E) INTER-INSTITUTIONAL AGREEMENTS

Inter-institutional Agreements between the Council, Commission, and the European Parliament have long been an important part of the EU. They are a form of constitutional glue through which the major institutional players can resolve high-level issues, provide guiding principles, or lay the foundations for more concrete legislative action. Such agreements have been made on topics of constitutional significance such as subsidiarity, transparency, the budget, and participation rights.[9]

Article 295 TFEU now provides that the European Parliament, Council, and Commission shall consult each other and by common agreement make arrangements for their cooperation. It also stipulates that they may, in compliance with the Treaties, conclude inter-institutional agreements which may be of a binding nature. There is therefore specific Treaty foundation for rendering inter-institutional agreements binding.

(F) RECOMMENDATIONS, OPINIONS, AND SOFT LAW

Article 288 states that recommendations and opinions have no binding force. While this precludes such measures from having direct effect, it does not immunize them from the judicial process. It is, for example, open to a national court to make a reference to the ECJ concerning the interpretation or validity of such a measure.[10]

Recommendations and opinions are, subject to the preceding point, forms of soft law.[11] They are not however the only species of soft law. The Commission has, for example, issued policy guidelines in the area of state aids to indicate how it will exercise its discretion.[12] There are moreover other EU initiatives, such as the open method of coordination, which straddle the divide in certain respects between soft and hard law.[13]

The admixture of formal and informal law is a common feature of any legal order. This feature has been positively lauded in the EU, rather than seen as a cause for apology or criticism. Thus the Commission in its 2000 Review of the Internal Market Strategy included a neat checklist of the legislative and non-legislative measures it intended to take in order to attain the single market.[14] The same

[12] Ch 29.

[13] Ch 6.

[14] COM(2000)257 final.

readiness to use the full range of policy instruments was apparent in the Nice European Council. In the implementation of the Social Agenda 'all existing Community instruments bar none must be used: the open method of coordination, legislation, the social dialogue, the Structural Funds, the support programmes, the integrated policy approach, analysis and research'.[15] A glance at the Commission's work programme for any year will reveal the interaction between legislative and non-legislative techniques for attaining EU objectives.[16]

The admixture of formal and informal law, while inevitable, can nonetheless give rise to problems. It may be difficult for those affected to understand what the 'law' actually is in a particular area. Recourse to informal law may also prevent the Council and EP from having effective input into the resulting norms.

3 HIERARCHY OF NORMS

(a) RATIONALE

Prior to the Lisbon Treaty the legal acts of the Community were those specified above. Regulations, directives, and decisions could be used either as the 'primary' norm to govern a particular topic, or as a 'secondary' norm made pursuant to the 'primary' norm. The EC Treaty contained however no formal hierarchy of legal acts. This has now changed. The Constitutional Treaty included reform of legal acts and created a hierarchy of norms. The Lisbon Treaty retained a hierarchy of legal acts,[17] although the nomenclature was altered because it was felt by the European Council that the words 'law' and 'lawmaking' in the Constitutional Treaty should be excised on the ground that they carried 'federal' and 'constitutional' resonance.

The provisions in the Constitutional Treaty on the hierarchy of norms followed, with some modifications, the recommendations of Working Group IX on Simplification,[18] but it is instructive to note the cautionary warning of the Group, that 'nothing is more complicated than simplification'.[19] The Working Group sought to attain a number of objectives: simplification, democratic legitimacy, and separation of powers. The hierarchy of norms was said to be 'the consequence of a better separation of powers'.[20] There was to be a clearer delineation between matters that fell to the legislative arm of government and those that were for the executive.

We shall consider in due course whether these aims have been realized. The remainder of this chapter will explicate the hierarchy of norms in EU law. The discussion begins with the top of the hierarchy, the constituent Treaties. This is followed by consideration of general principles of law, which sit below the Treaties but above other forms of legal act. There will then be analysis of the delineation

[19] Ibid 1.

[20] Ibid 2.

between legislative, delegated, and implementing acts laid down in the Lisbon Treaty, with the details as to how these acts are made being considered in the following chapter.

(B) TREATIES AND CHARTER

It is common when discussing the hierarchy of norms to focus solely on legislative, delegated, and implementing acts, and the hierarchy between them. This is indeed a central part of the subject. It is however incomplete. It is the constituent Treaties, the TEU and TFEU, which sit at the top of the hierarchy of norms in the EU. The Charter of Rights has the same status, since Article 6(1) TEU states that the Charter has the same legal value as the Treaties. The Treaty provisions will themselves be construed in light of the Charter, in order to give the interpretation that best fits with Charter rights. Any legislative act must, as we have seen in the previous chapter, be made pursuant to some Treaty Article, and the Union Courts will determine the scope and interpretation of such Treaty and Charter provisions.

(C) GENERAL PRINCIPLES

The point made in the preceding section is important and obvious. The subject matter in this section is less obvious for those who are not yet familiar with EU law. The second tier of the hierarchy of norms belongs to what are known as general principles of law.[21] They sit below the constituent Treaties, and may be used when interpreting particular Treaty Articles. They sit above legislative, delegated, and implementing acts: general principles can be used not only to interpret such acts, but also as a ground for invalidation if a particular legislative, delegated, or implementing act contravenes these principles.

The general principles have been largely fashioned by the Union Courts. They have read principles such as proportionality, fundamental rights, legal certainty, legitimate expectations, equality, the precautionary principle, and procedural justice into the Treaty, and used them as the foundation for judicial review under Articles 263 and 267 TFEU. This is examined in more detail below,[22] but the role played by such principles must be understood here.

All developed legal systems embody grounds of judicial review that provide the framework within which the courts exercise their powers. The principles of judicial review will normally form part of administrative law, and provide the basis for legal challenges to governmental action. These principles may be developed by the courts. They may be laid down by statute or code. They may be formed from an admixture of the two.

In the EU, the Treaty forms the starting point for elaboration of the grounds of review. Article 263(2) TFEU stipulates that judicial review shall be available for lack of competence, infringement of an essential procedural requirement, infringement of the Treaties or of any rule of law relating to their application, or misuse of powers. The influence of French juristic thought is clearly imprinted on these grounds of review. Article 263 TFEU nonetheless accorded the ECJ, and later the CFI (now the General Court), considerable latitude in fashioning the principles of judicial review.

The ECJ's role was facilitated by the broad wording of Article 263(2), especially the third ground of review, 'infringement of the Treaties or any rule of law relating to their application'. The absence of the *travaux préparatoires* means that we do not know what the latter part of this phrase was intended to connote. The intent might simply have been to ensure that Commission decision-making complied

[21] T Tridimas, *The General Principles of EU Law* (Oxford University Press, 2nd edn, 2006); P Craig, *EU Administrative Law* (Oxford University Press, 2006).

[22] Ch 15.

not only with the primary Treaty Articles, but also regulations, directives, etc, passed pursuant thereto. If this had been the intent it could however have been expressed far more simply. The intent might alternatively have been to capture compliance not only with secondary legislation, but also with other rules of law relating to the application of the Treaty that might be developed by the Courts. In any event, the very ambiguity in the phrase provided the ECJ with a window through which to justify the imposition of administrative law principles as grounds of review.

Article 19 TEU (ex Article 220 EC) was equally important in this respect. It charged the Union Courts with the duty of ensuring that in the interpretation and application of the Treaty the law should be observed. This might have been interpreted in a limited manner to connote the idea that, for example, Commission decisions should be made within the limits of the primary Treaty Articles and secondary legislation. The word 'law' within this Article was however open to a broader interpretation that was used by the ECJ to fashion a system of general principles through which the legality of Union and Member State action could be determined.

The judicial task of elaborating principles of judicial review was further facilitated by more specific Treaty Articles, which made reference to, for example, non-discrimination. It was then open to the ECJ to read these particular Treaty references as indicative of a more general principle of equal treatment and non-discrimination that underpinned the legal order.[23]

In developing these concepts the ECJ and later the CFI drew upon administrative law doctrine from the Member States. They did not systematically trawl through the legal systems of each Member State in order to find common principles. The approach was, rather, to consider principles in the major legal systems of the Member States, to use those that were felt to be best developed, and to fashion them to the EU's own needs.[24] German law was perhaps the most influential. It was German jurisprudence on, for example, proportionality and legitimate expectations that was of principal significance for the development of EU law in these areas.

The general principles afford the EU Courts considerable power over the interpretation of Treaty Articles and the interpretation and validity of other Union acts, as will be apparent from discussion throughout this book. The EU Courts also have considerable power over whether to recognize a new general principle of EU law, as exemplified by the following cases.

Cases T–74, 76, 83–85, 132, 137, 141/00 **Artegodan GmbH and Others v Commission** [2002]ECR II–4945

[Note Lisbon Treaty renumbering: Arts 6, 152, 153, 174, 175 EC are now Arts 11, 168, 169, 191, 192 TFEU]

The case concerned marketing authorizations issued for drugs to control obesity. The Commission withdrew the authorizations pursuant to Directive 65/65 on the basis of scientific advice that the drugs might be harmful to health. The applicants sought annulment of the Commission decisions, and the CFI considered the status of the precautionary principle in EU law.

THE CFI

181 [W]here there is scientific uncertainty, it is for the competent authority to assess the medicinal product in question in accordance with the precautionary principle. It is therefore appropriate to recall

[23] Cases 117/76 and 16/77 *Ruckdeschel v Hauptzollamt Hambourg-St. Annen* [1977] ECR 1753, [7].
[24] Case 14/61 *Hoogovens v High Authority* [1962] ECR 253, 283–284, Lagrange AG.

the origin and content of that principle before explaining its effect on the rules of evidence in connection with the system of prior authorisation of medicinal products.

182 As regards environmental matters, the precautionary principle is expressly enshrined in Article 174(2) EC, which establishes the binding nature of that principle. Furthermore, Article 174(1) includes protecting human health among the objectives of Community policy on the environment.

183 Therefore, although the precautionary principle is mentioned in the Treaty only in connection with environmental policy, it is broader in scope. It is intended to be applied in order to ensure a high level of protection of health, consumer safety and the environment in all the Community's spheres of activity. In particular, Article 3(p) EC includes 'a contribution to the attainment of a high level of health protection' among the policies and activities of the Community. Similarly, Article 153 EC refers to a high level of consumer protection and Article 174(2) EC assigns a high level of protection to Community policy on the environment. Moreover, the requirements relating to that high level of protection of the environment and human health are expressly integrated into the definition and implementation of all Community policies and activities under Article 6 EC and Article 152(1) EC respectively.

184 It follows that the precautionary principle can be defined as a general principle of Community law requiring the competent authorities to take appropriate measures to prevent specific potential risks to public health, safety and the environment, by giving precedence to the requirements related to the protection of those interests over economic interests. Since the Community institutions are responsible, in all their spheres of activity, for the protection of public health, safety and the environment, the precautionary principle can be regarded as an autonomous principle stemming from the abovementioned Treaty provisions.

185 It is settled case-law that, in the field of public health, the precautionary principle implies that where there is uncertainty as to the existence or extent of risks to human health, the institutions may take precautionary measures without having to wait until the reality and seriousness of those risks become fully apparent . . . Prior to the enshrinement in case-law of the precautionary principle, on the basis of the Treaty provisions, that principle was implicitly applied in the review of proportionality . . . .

The CFI was therefore willing to extrapolate from limited Treaty references to the precautionary principle, and from mention of the principle in some case law, and enshrine it as a general principle of law. It was not however willing to recognize a general principle in *Audiolux*.

Case C–101/08 **Audiolux SA ea v Groupe Bruxelles Lambert SA (GBL)** [2009] ECR I–9823

The reference for a preliminary ruling raised the question whether there was a general principle of Community law of equality of shareholders under which minority shareholders were protected by an obligation on the dominant shareholder, when acquiring or exercising control of a company, to offer to buy the minority shareholders' shares under the same conditions as those agreed when a shareholding in that company conferring or strengthening the control of the dominant shareholder was acquired.

THE ECJ

33. In that connection, the national court refers to a number of provisions of secondary Community legislation, namely Articles 20 and 42 of Directive 77/91, General principle 3 and Supplementary principle 17 of the Code of Conduct, Paragraph 2(A) of Schedule C in the Annex to Directive 79/279 and Article 3(1)(a) of Directive 2004/25, read in the light of Recital 8 in the preamble thereto.

34. It must be observed, first of all, that the mere fact that secondary Community legislation lays down certain provisions relating to the protection of minority shareholders is not sufficient in itself

to establish the existence of a general principle of Community law, in particular if the scope of those provisions is limited to rights which are well defined and certain. Therefore, in examining the provisions mentioned by the national court, the sole purpose is to ascertain whether they give any conclusive indications of the existence of such a principle. In that connection, it must be stated that only if those provisions are drafted so as to have binding effect . . . will those provisions have indicative value showing the well-defined content of the principle concerned (see, to that effect, Jippes and Others, paragraph 73).

35. First, it is clear that the scope of the abovementioned provisions of Directives 77/91 and 79/279 is limited to well-defined situations and that they do not cover a situation such as that at issue in the case in the main proceedings.

. . .

42. . . . Furthermore, as the Advocate General notes, in point 84 of her Opinion, those provisions are essentially limited to regulating very specific company-law situations by imposing on companies certain obligations for the protection of all shareholders. They do not therefore possess the general, comprehensive character which is otherwise naturally inherent in general principles of law.

43. Second, as regards General principle 3 and Supplementary principle 17 of the Code of Conduct and Directive 2004/25, it should be noted that neither that code nor the directive expressly mentions the existence of a general principle of Community law relating to the protection of minority shareholders.

. . .

50. [T]he provisions of Directive 2004/25 apply to specific situations, so that no general principle with a specific content can be inferred from them. In addition, they do not, as was already stated with respect to the provisions of Directives 77/91 and 79/279, in paragraph 42 of this judgment, possess the general, comprehensive character which is naturally inherent in general principles of law.

. . .

52. Having regard to the foregoing, it must be held that the provisions of secondary Community law to which the national court refers do not provide conclusive evidence of the existence of a general principle of equal treatment of minority shareholders.

(D) LEGISLATIVE ACTS

Article 289 TFEU is the governing provision that deals with legislative acts. It provides as follows.

1. The ordinary legislative procedure shall consist in the joint adoption by the European Parliament and the Council of a regulation, directive or decision on a proposal from the Commission. This procedure is defined in Article 294.

2. In the specific cases provided for by the Treaties, the adoption of a regulation, directive or decision by the European Parliament with the participation of the Council, or by the latter with the participation of the European Parliament, shall constitute a special legislative procedure.

3. Legal acts adopted by legislative procedure shall constitute legislative acts.

4. In the specific cases provided for by the Treaties, legislative acts may be adopted on the initiative of a group of Member States or of the European Parliament, on a recommendation from the European Central Bank or at the request of the Court of Justice or the European Investment Bank.

The basic premise of Article 289 TFEU is that legislative acts are legal acts adopted by a legislative procedure. The legal acts that can be legislative are regulations, directives, or decisions: provided that they are adopted in accordance with a legislative procedure they will constitute legislative acts for the purposes of the Lisbon Treaty. The default position is that this will be the ordinary legislative procedure, which is the successor to co-decision. A special legislative procedure is however mandated in certain instances.[25]

[25] Ch 5.

The important point to note is that the definition of a legislative act is purely formal. This follows from the wording of Article 289(3) TFEU: any legal act, whether in the form of a regulation, directive, or decision, which is enacted in accordance with the ordinary or special legislative procedure is a legislative act for the purposes of the Lisbon Treaty. This formalism is symmetrical: any legal act enacted by the ordinary or special legislative procedure is by definition a legislative act; and if a legal act is not enacted in this manner then it does not constitute a legislative act. There are two consequences of this formalism.

The first is that the content of the act is not relevant to its status as a legislative act. If a legislative procedure is prescribed for the enactment of a legal act then it is by definition a legislative act, notwithstanding that the content of the measure might well be regarded as administrative in nature. The converse is equally true. If the Lisbon Treaty does not prescribe a legislative procedure for the passage of a legal act then it is not a legislative act, even if judged by its content it lays down rules of general application that would in substantive terms be regarded as legislative in nature.

The second consequence of the formalistic approach is that the only legal acts that constitute legislative acts for the purposes of the Lisbon Treaty are those made in accordance with the ordinary or special legislative procedure as defined in Article 289(1)–(2) TFEU, including in the case of the latter the requirement that this special procedure is mandated in the specific cases provided for by the Treaties. This gives rise to problems because certain Treaty Articles do not specify the ordinary or special legislative procedure. and hence the acts made thereunder are *prima facie* not legislative acts,[26] even though the measures enacted under the predecessor provisions of the EC Treaty clearly were legislative in nature.

(E) DELEGATED ACTS

Article 290 TFEU defines the new category of delegated act, and sets the conditions and controls over the making of such acts.

> 1. A legislative act may delegate to the Commission the power to adopt non-legislative acts of general application to supplement or amend certain non-essential elements of the legislative act.
>
> The objectives, content, scope and duration of the delegation of power shall be explicitly defined in the legislative acts. The essential elements of an area shall be reserved for the legislative act and accordingly shall not be the subject of a delegation of power.
>
> 2. Legislative acts shall explicitly lay down the conditions to which the delegation is subject; these conditions may be as follows:
>
> (a) the European Parliament or the Council may decide to revoke the delegation;
>
> (b) the delegated act may enter into force only if no objection has been expressed by the European Parliament or the Council within a period set by the legislative act.
>
> For the purposes of (a) and (b), the European Parliament shall act by a majority of its component members, and the Council by a qualified majority.
>
> 3. The adjective 'delegated' shall be inserted in the title of delegated acts.

The Lisbon Treaty established two categories of act below that of legislative acts: delegated and implementing acts. The procedure for the making of such acts will be considered in the subsequent chapter. The present discussion is concerned with the nature of delegated and implementing acts and the criteria for the divide between them. The rationale for the divide was to distinguish between secondary measures that were 'legislative' in nature, delegated acts, and those that could be regarded

[26] See, eg, Arts 103, 109 TFEU; Craig, *The Lisbon Treaty* (n 17) ch 7.

as more purely 'executive', implementing acts. The difficulties of realizing this divide were however never fully thought through in the deliberations on the Constitutional or Lisbon Treaty, and it is, as will be seen below, very doubtful whether the objective has been realized.

A brief word by way of background to the pre-Lisbon position is necessary to understand the current regime. Prior to the Lisbon Treaty there was no divide between what are now termed delegated and implementing acts. The standard pattern was for there to be a 'primary' regulation or directive that governed a particular policy area. This was complemented by 'secondary' legal measures that 'implemented' the primary rules in accordance with Article 202 EC. This admixture of primary and secondary rules is common in legal systems. The Council recognized from the outset of the EEC that not everything could be done by primary regulation and that it would need to delegate power to the Commission to make secondary norms. The Council was however unwilling to accord the Commission a blank cheque, because it realized that regulatory choices and contentious issues could be resolved through such measures, the devil being in the detail.

This was the rationale for the birth of what became known as Comitology, whereby national technocrats would sit with the Commission when it made these secondary measures, with the possibility of sending them to the Council in accordance with the management and regulatory committee procedures if the national technocrats disagreed with the Commission's proposal. These committee procedures will be analysed below.[27] Suffice it to say for the present that they gave national technocrats who were Member State representatives input into the making of the secondary measure. The power of the management and regulatory committees flowed from the fact that if they disagreed with the Commission's proposal it could be referred back to the Council, which could then veto the measure.

The European Parliament was not happy with this regime, because although it had some role in the Comitology process, it was very much dominated by Council and Member State interests. The Commission for its part always chafed at what it regarded as unwarranted Comitology constraints on its executive autonomy. The front line Directorates-General might have been content working with national technocrats, but the higher levels within the Commission were never happy with management and regulatory committees. The strategy was to devise some method whereby it could be freed from these limitations.[28] It advocated a regime of *ex ante* and *ex post* constraints on non-legislative acts of the kind that are now contained in Article 290 TFEU. Comitology in its pre-Lisbon form will therefore no longer operate in relation to delegated acts. It is clear nonetheless that some 'advisory' committees composed of national experts will continue to exist in relation to delegated acts, and it is clear also that a revised form of Comitology operates in relation to implementing acts. Article 290 now governs delegated acts, which have a number of features.

First, they are described as 'non legislative acts of general application'. They are, however, only non-legislative in the formal sense that they are not legislative acts, because they have not been made in accordance with the ordinary or special legislative procedure. Many such delegated acts will nonetheless be legislative in nature. This view is reinforced by the fact that they are said to be of general application, and can supplement or amend certain non-essential elements of legislative acts, and because there is a separate provision dealing with administrative decisions.[29] The reality is therefore that a delegated act will often be what would be regarded in some domestic legal systems as secondary or delegated legislation. This was recognized by the Working Group, which depicted these acts as a new category

[27] Ch 5.

[28] European Governance, COM(2001)428 final, [20]–[29]; Institutional Architecture, COM(2002)728 final, [1.2], [1.3.4]; Proposal for a Council Decision Amending Decision 1999/468/EC Laying Down the Procedures for the Exercise of Implementing Powers Conferred on the Commission, COM(2002)719 final, 2; Final Report of Working Group IX on Simplification, CONV 424/02, Brussels, 29 Nov 2002, 12.

[29] Art 288 TFEU.

of legislation.[30] It was also acknowledged by the European Parliament's Committee on Legal Affairs, whose report was explicitly prefaced on the premise that delegation was a 'delicate operation', whereby the Commission was instructed to exercise a power that was 'intrinsic to the legislator's own role'.[31]

Secondly, the legislative act must define the objectives, content, scope, and duration of the delegation of power. This is reinforced by the injunction that the essential objectives of an area must be reserved to the legislative act, and cannot be delegated. These requirements will be policed by the Union Courts, although judicial review to determine whether the essential elements of an area were adequately laid down in the primary act has not hitherto been intensive or searching.[32]

Thirdly, the delegated act can 'amend or supplement' non-essential elements of the legislative act. Any general measure that amends or supplements a legislative act must be a delegated act made under Article 290, not Article 291. The meaning of amend and supplement is therefore crucial, because different controls operate under Articles 290 and 291. The two categories are mutually exclusive, as accepted by the Commission.[33] The term 'amend' denotes a delegated act that formally changes some non-essential element of the legislative act. The word 'supplement' is not subject to such ready definition, as acknowledged by the Commission,[34] but it has in the past been used in a symmetrical manner with 'amend', such that the former connotes the addition of non-essential elements, while the latter captures the deletion thereof.[35] This interpretation is evident in the 2009 Commission Communication, where the Commission construed 'supplement' to connote a measure that specifically added new non-essential rules that changed the legislative act, whereas conversely a measure that only gave effect to the existing rules of the basic instrument should not be deemed a supplementary measure.[36] The difficulty of this divide will become apparent below when discussing implementing acts.

The fourth feature of delegated acts is that they are subject to the controls specified in Article 290. The efficacy of these controls will be analysed below.[37] Suffice it to say for the present that in addition to the requirement that the legislative act specifies the essential features of the subject matter, the EP or the Council is empowered to revoke the delegation and can veto the particular delegated act.

(F) IMPLEMENTING ACTS

Article 291 defines the new category of implementing act and specifies the conditions for the making of such acts. It should be noted that an implementing act can be made pursuant to a legislative act or a delegated act. This follows from Article 291, which specifies that implementing acts can be made pursuant to any legally binding Union act.

> 1. Member States shall adopt all measures of national law necessary to implement legally binding Union acts.
>
> 2. Where uniform conditions for implementing legally binding Union acts are needed, those acts shall confer implementing powers on the Commission, or, in duly justified specific cases and in the cases provided for in Articles 24 and 26 of the Treaty on European Union, on the Council.

[36] COM(2009)673 (n 33) [2.3].
[37] Ch 5.

3. For the purposes of paragraph 2, the European Parliament and the Council, acting by means of regulations in accordance with the ordinary legislative procedure, shall lay down in advance the rules and general principles concerning mechanisms for control by Member States of the Commission's exercise of implementing powers.

4. The word 'implementing' shall be inserted in the title of implementing acts.

It is important once again to take a step back in order to understand the change made by the Lisbon Treaty. We have already seen that pre-Lisbon the making of secondary measures was governed by Article 202 EC, which was framed so as to allow delegation of power to the Commission for the 'implementation' of rules laid down by the Council, subject to the Comitology procedure. There was significant variation as to the secondary measures concluded pursuant to Article 202 EC. In reality there was a spectrum of secondary norms, with 'pure' rule-making at one end, 'pure' implementation at the other, and many measures falling between the two. This did not however matter pre-Lisbon since the same Treaty provision, Article 202 EC, applied to all such measures.[38]

The term 'implementation' as used in Community legislation and on official websites thus covered what are now termed delegated acts, as well as the terrain now covered by implementing acts. Thus the standard format in EC legislation was to empower the Commission to make 'implementing provisions', 'implementing rules', or 'determine detailed rules', subject to Comitology, and the paradigmatic application was through delegated rule-making or decision-making that amended or supplemented the primary legal norm.[39] The same terminology was evident on official websites, where the term 'implementing provisions' carried the broad connotation used in Community legislation.[40]

The post-Lisbon world now requires us to distinguish between delegated acts and implementing acts. Delegated acts are of general application and amend or supplement the legislative act. Implementing acts will normally be of general application, since Article 291 specifies their use in circumstances where uniform conditions for implementing legally binding acts are needed. Thus in most instances implementing acts will be of general application. The key distinguishing feature is therefore, as seen above, that implementing acts execute the legislative act without amendment or supplementation. Consider in this respect the Commission's approach to this issue.

Implementation of Article 290 of the Treaty on the Functioning of the European Union
COM(2009) 673 final

Firstly, it believes that by using the verb 'amend' the authors of the new Treaty wanted to cover hypothetical cases in which the Commission is empowered formally to amend a basic instrument. Such a formal amendment might relate to the text of one or more articles in the enacting terms or to the text of an annex that legally forms part of the legislative instrument. It makes little difference whether the annex contains purely technical measures; as soon as the Commission is empowered to amend an annex containing measures of general application, the regime of delegated acts must be applied.

[38] The nature of the secondary measure could after 2006 impact on the precise version of the Comitology procedure.

[39] Craig, *The Lisbon Treaty* (n 17) 271.

[40] See, eg, http://ec.europa.eu/competition/antitrust/legislation/regulations.html; http://ec.europa.eu/information_society/policy/ecomm/implementation_enforcement/index_en.htm; http://ec.europa.eu/internal_market/services/services-dir/implementation_en.htm; http://ec.europa.eu/internal_market/publicprocurement/legislation_en.htm.

> Secondly, the Commission wishes to stress the importance that should be attached to the verb 'supplement', the meaning and scope of which are less specific than those of the verb 'amend'.
>
> The Commission believes that in order to determine whether a measure 'supplements' the basic instrument, the legislator should assess whether the future measure specifically adds new non-essential rules which change the framework of the legislative act, leaving a margin of discretion to the Commission. If it does, the measure could be deemed to 'supplement' the basic instrument. Conversely, measures intended only to give effect to the existing rules of the basic instrument should not be deemed to be supplementary measures.
>
> The legislator is entitled to enact full and comprehensive regulations governing a particular field of action, entrusting to the Commission the responsibility for ensuring their harmonised implementation through implementing acts; alternatively the legislator can choose to regulate the field in question only partially, leaving the Commission the responsibility for supplementing the regulations with delegated acts.

The Commission captures the criterion that must be applied to distinguish delegated and implementing acts. There, are, however two very real difficulties with this criterion, which call into question the plausibility of the divide between delegated and implementing acts.[41]

First, there is what might be termed 'the language problem': all secondary measures involve some addition to the primary act. Many thousands of secondary measures have been enacted since the inception of the EEC. In the paradigm case they bring greater exactitude to the meaning of an article of the primary act. Thus, for example, there might be a complex primary act dealing with agriculture, and a secondary measure specifies in greater detail one part of the primary act relating to, for example the requirements for the independence of agencies that pay money pursuant to the primary regulation. Such measures clearly 'add something' to the primary act. This will be equally true for any measure classified as an implementing act in the post-Lisbon world, since the very specification of uniform conditions of implementation will be 'adding something' to the enabling provision in the legislative or delegated act. The key issue is therefore whether what is added will be regarded as amending or supplementing the primary act. This demands the following evaluation.

The legislature and Court might consider that the article in, for example, the legislative act has sufficiently resolved the relevant issues, the conclusion being that the secondary measure, while obviously imbuing the article of the legislative act with greater detail, does not supplement it by adding any 'new' non-essential element so as to trigger the need for recourse to Article 290, the conclusion being that Article 291 can be used. They might in other instances find that the relevant article in the legislative act is less definitive, the conclusion being that while it has provided sufficient guide as to essential principles, the secondary measure has nonetheless supplemented it by the addition of 'new' non-essential elements, the conclusion being that Article 290 must be used.

The divide between the terrain of delegated and implementing acts will turn on the preceding determination. It is difficult to regard this as satisfactory. It is bound to generate inter-institutional disputes as to whether recourse should be had to Article 290 or 291 TFEU. It calls into question the normative foundation for the differential controls that operate in relation to delegated and implementing acts. There will inevitably be instances where juxtaposition of acts will reveal scant reason as to why the 'supplementation' of the legislative act in the one instance should be regarded as a 'new' non-essential element, such that a delegated act is required, while in other instances this is not so, such that an implementing act can be used.

Secondly, the preceding difficulty is exacerbated by the 'time problem'. The problem is quite simple, but quite dramatic. It is not possible to decide conclusively whether a secondary measure falls into the category of delegated or implementing acts according to the preceding criterion until it is made,

[41] Craig, *The Lisbon Treaty* (n 17); Craig, 'Delegated Acts' (n 17).

more especially because any draft measure may be changed prior to final enactment and this may take the measure from the category of delegated to implementing act, or vice versa. However the choice between delegated and implementing act has to be made at an early stage. This is because the procedures for making delegated and implementing acts are very different.[42] Delegated acts are subject to the *ex ante* and *ex post* controls described above exercised by the Council or European Parliament; implementing acts are subject to a revised version of the Comitology procedure. The danger is that once the Commission has decided that a measure should be classified as, for example, an implementing act, and the revised Comitology process has been engaged, it will be loathe to admit that any changes made by this process involve 'supplementation' of the legislative act via the introduction of 'new' non-essential elements, since this would mean that the act should be regarded as a delegated act.

(G) INCOMPLETE CATEGORIZATION

The discussion thus far has considered the schema of legal acts in the Lisbon Treaty and the problems presented by this novel regime. It would however be wrong to conclude this discussion without adverting to the incompleteness of the Lisbon categorization. There are two respects in which this is so.

First, certain acts do not seem to fit the categories considered above. We have seen that legislative acts, delegated acts, and implementing acts can in principle take the form of regulations, directives, or decisions, subject to the caveats noted above. We have also seen that each type of legal act has its own criteria. Legislative acts are defined formally in accordance with the procedure for their enactment. Delegated acts must be made pursuant to a legislative act, they must be of general application, and amend or supplement non-essential elements of the legislative act. Implementing acts are premised on the need for uniform conditions of implementation. This leaves an interesting inquiry as to the nature of acts that do not fit these categories.

Consider, for example, a standard administrative decision addressed to a particular person, which falls within the definition of decision in Article 288 TFEU. It will not be a legislative act if it is not made by a legislative procedure. It will not be a delegated act, since these can only be made pursuant to a legislative act and must be of general application. It will not be an implementing act, since the paradigm administrative decision addressed to a particular person has nothing to do with uniform conditions for implementation as that term is used in Article 291. We might conclude that such decisions cannot legally be made. This would however lead to very considerable practical difficulties and would fly in the face of Article 288, which clearly contemplates a decision addressed to a particular person. The alternative is to accept that such decisions can be legally made, but to acknowledge that they may not fit into the categories of legislative, delegated, or implementing act, the corollary being that the hierarchy of legal acts composed of these categories does not capture the totality of the ways in which legal norms are made in the post-Lisbon world.

Secondly, while the Lisbon Treaty dismantled the formal pillar system that applied hitherto, there are nonetheless distinct rules concerning the legal acts that can be used for the Common Foreign and Security Policy, CFSP.[43] Article 25 TEU provides that the Union shall conduct the CFSP through a number of measures. General guidelines must be defined, this being a matter for the European Council.[44] Decisions should be adopted defining actions to be undertaken by the Union, positions to be taken by the Union, and arrangements for the implementation of the preceding decisions. These decisions are taken primarily by the Council on the basis of the general guidelines decided by the

[42] Title V TEU.
[43] Ch 10.
[44] Arts 26(1), 42(2) TEU.

European Council.[45] It is however unclear whether the term 'decision' used in this context bears the same meaning as in Article 288 TFEU, although this seems doubtful given the specific contexts in which the decision is used in relation to the CFSP. The CFSP is also to be furthered through strengthening systematic cooperation between Member States in the conduct of policy. The CFSP is put into effect by the High Representative and by the Member States, using national and Union resources. Legislative acts cannot be undertaken in relation to the CFSP,[46] and the general rule is that decisions are taken unanimously, although there is provision for qualified-majority voting in certain instances.[47]

4 CONCLUSIONS

i. The EU has a number of formal legal norms at its disposal. The three principal types are regulations, directives, and decisions. In most instances the EU can choose which type of legal provision to use.
ii. EU policy in any particular area will be made by various formal legal norms. A basic regulation can be made more concrete through further regulations, or through directives or decisions. The foundational provision may equally well be a directive or even a decision, which can then be complemented by secondary norms cast in terms of regulations, directives, or decisions. These formal legal norms will be supplemented by a variety of soft law devices.
iii. The Lisbon Treaty instituted a more formal hierarchy of legal norms than existed hitherto. There are now five categories within this hierarchy: the constituent Treaties, TEU and TFEU, and the Charter of Rights; general principles of law; legislative acts; delegated acts; and implementing acts. There are four points to note about this hierarchy.
iv. First, the elaboration and application of general principles of law lies principally with the Union Courts. This gives them considerable power to decide what constitutes a general principle of EU law. They also have considerable power in deciding how these principles should be applied. This is particularly important because general principles can shape the interpretation of Treaty provisions and other Union acts, and because they can in addition serve as the ground for invalidation of legislative, delegated, and implementing acts.
v. Secondly, certain elements within this hierarchy are defined in purely formal terms. Thus, for example, the definition of legislative acts is formal in the sense that it connotes acts made in accordance with a legislative procedure, irrespective of the nature of the measure enacted. The definition of delegated acts is also formal, insofar as they are said to be non-legislative, since this simply means that these acts have not been made in accordance with the procedure for legislative acts.
vi. Thirdly, the distinction between delegated and implementing acts is problematic. The rationale for the divide was to distinguish between secondary measures that were 'legislative' in nature, delegated acts, and those that could be regarded as more purely 'executive', implementing acts. The difficulties of realizing this divide were however never fully thought through in the deliberations on the Constitutional or Lisbon Treaties. It is clear that the distinction turns on a criterion that is questionable in terms of principle and very difficult to apply, 'the language problem', and this difficulty is exacerbated by the 'time problem'. The consequence is that different mechanisms of control and accountability in Articles 290 and 291 will be applied to secondary measures, where the distinction between the measures is a very fine one, judged by the criterion demanded by

[45] Arts 26(2), 28, 29, 42(4), 43 TEU.
[46] Art 31 TEU.
[47] Art 31 TEU.

the Treaty provisions. This is not satisfactory. It may lead to the institutional players spending very considerable amounts of time trying in good faith to apply the criterion, even though its application is inherently contestable. It may alternatively lead the institutional players to seek to categorize the secondary measure as a delegated or implementing act, based on their perception of which set of procedures maximizes their input/control and hence is optimal from their perspective. If this happens, and in all likelihood it will, it will thereby undermine the very rationale for the division between the two types of act.

vii. Fourthly, the hierarchy or norms is incomplete, in the sense that there are certain legal acts that do not readily fall within any of these categories.

LEGISLATION AND DECISION-MAKING

1 CENTRAL ISSUES

i. The previous chapters focused on the scope of EU competence, and the forms of EU action, including the hierarchy of norms. The present chapter will consider the process by which the EU enacts legislation and makes decisions.

ii. The chapter begins by considering the making of legislative acts. This includes the Treaty rules and practice concerning the initiation of the legislative process, and the way in which what is now termed the ordinary legislative procedure, in which the Council and EP act as co-legislators, has come to occupy centre stage. The rationale for and use of the special legislative procedure are then explained.

iii. The focus then shifts to the making of delegated acts. There are perennial problems of reconciling the need for the expeditious passage of detailed regulatory norms with some measure of legislative oversight. The Lisbon Treaty has made significant changes in this respect and these changes are explained and evaluated.

iv. The discussion concerning delegated acts is followed by analysis of the way in which implementing acts are made. The problem of maintaining the division between delegated acts and implementing acts is highlighted, and the difficulties with the making of such acts are explicated.

v. It is equally important to understand the way in which legislation and policy are made in practice. The planning of the overall legislative agenda, and the passage of particular regulations or directives, involves interaction between EU institutions, interest groups, national parliaments, and national bureaucracies.

vi. There is a rich debate about democracy and legitimacy within the EU. An understanding of the issues involved in this discourse is, as we shall see, a condition precedent for having something meaningful to say about it.

2 LEGISLATIVE INITIATIVE: PRINCIPLE AND PRACTICE

The basic principle under the Lisbon Treaty is that the Commission has the right of legislative initiative, thereby formalizing the pre-existing legal position. This had hitherto been the case because

Treaty Articles generally stipulated that Community legislation could only be made at the initiative of the Commission. The Commission retained its 'gold standard', the right of legislative initiative, which was formalized in the Lisbon Treaty: Union legislative acts may only be adopted on the basis of a Commission proposal, except where the Treaties provide otherwise.[1]

The reality prior to the Lisbon Treaty was nonetheless that many legislative initiatives originated in the Council or the European Council. The legislative process for such measures was formally initiated by the Commission, but the impetus for their introduction often lay with the Council. The Council thus made liberal use of the power to request the Commission to undertake studies the Council considered 'desirable for the attainment of the common objectives, and to submit to it any appropriate proposals'. This power has been retained in the Lisbon Treaty.[2]

The position of the European Parliament in relation to legislative initiation has in formal terms remained the same under the Lisbon Treaty. It can under Article 225 TFEU request the Commission to submit any appropriate proposal on matters on which it considers that a Union act is required for the purpose of implementing the Treaties. If the Commission does not submit a proposal, it must inform the European Parliament of the reasons.[3] The Commission hitherto has not accepted that it must automatically pursue a matter referred to it in this manner, but the Framework Agreement on relations between the Parliament and Commission signed in 2000 included a provision under which the Commission committed itself to undertake 'a prompt and sufficiently detailed response' to such requests.[4]

The EP's Rules of Procedure specify how it uses Article 225.[5] The normal route for a request to the Commission is that there is an own-initiative report of the responsible EP committee,[6] which forms the basis for a resolution of the EP requesting the Commission to submit a proposal, and this request may indicate a deadline for submission of the proposal. The alternative route is that an individual MEP can be the catalyst for use of Article 225. The proposal is submitted to the EP President, who then refers it to the appropriate EP committee. If the EP committee is supportive, its report then forms the basis for the resolution of the EP requesting that the Commission submit the proposal. The EP's resolution must indicate the appropriate legal basis and be accompanied by detailed recommendations as to the content of the required proposals, which must respect fundamental rights and subsidiarity.

It remains to be seen whether other changes made by the Lisbon Treaty have an impact, directly or indirectly, on the European Parliament's role in the initiation of legislation. The basic idea is that, subject to control by the European Council,[7] the Commission President will be a person who is acceptable to the dominant grouping in the European Parliament. It remains to be seen how this works in practice. The candidate for President of the Commission will have to win support from the majority within the European Parliament. This may well entail discussion not only of the candidate's overall vision for the EU, but more detailed specification of the legislative programme for the forthcoming years.

An innovation introduced by the Lisbon Treaty was the citizens' initiative. Article 11(4) TEU provides that no fewer than one million citizens who are nationals of a significant number of Member States may take the initiative of inviting the European Commission, within the framework of its powers, to submit any appropriate proposal on matters where citizens consider that a

legal act of the Union is required for the purpose of implementing the Treaties. The procedures and conditions required for such a citizens' initiative are to be determined in accordance with Article 24 TFEU.[8]

3 LEGISLATIVE ACTS: THE ORDINARY LEGISLATIVE PROCEDURE

(A) PRE-LISBON

Prior to the Lisbon Treaty there were numerous legislative procedures, the principal difference being the degree of power afforded to the European Parliament. The European Parliament was given the smallest role in the legislative process in the Rome Treaty: subject to limited exceptions, it had only a right to be consulted, and this was so only where a particular Treaty Article so provided.

Subsequent Treaty amendments increased the EP's role in the legislative process. The cooperation procedure introduced by the Single European Act 1986 was particularly important.[9] It began the transformation of the legislative process, giving the EP significant input into the legislative process for the first time.[10] The previous reality encapsulated in the maxim that the 'Commission proposes, the Council disposes' changed. There were now three players in the game, which had wide-ranging ramifications. The Commission recognized the need for increased inter-institutional cooperation. It had to draft proposals with an eye to what would 'play' with the EP as well as the Council.[11] Coreper, the gatekeeper for the Council, had to consider the views of the EP, as well as the Council and Commission.[12] The EP's powers in the legislative process were 'transformed from the weak and essentially unconstructive power of delay to a stronger and potentially constructive role in the drafting of legislation'.[13]

The most significant increase in the power of the EP was through the co-decision procedure introduced by the Maastricht Treaty, which prevented a measure being adopted without the approval of the Council and the EP.[14] The subject matter areas to which the co-decision procedure applies were extended by later Treaty reforms.

(B) ORDINARY LEGISLATIVE PROCEDURE

This process was continued in the Lisbon Treaty. The EU was mindful of the complexity of the legislative procedures and the damaging effect on its legitimacy.[15] The Lisbon Treaty has simplified matters in this respect. The European Parliament and the Council are said to exercise legislative

and budgetary functions jointly.[16] This is embodied in Article 14(1) TEU, which provides that the European Parliament shall, jointly with the Council, exercise legislative and budgetary functions. This provision is replicated in relation to the Council in Article 16(1) TEU.

The cooperation procedure has been repealed. The co-decision procedure is now deemed to be the ordinary legislative procedure,[17] and this procedure consists in the joint adoption by the European Parliament and the Council of a regulation, directive, or decision on a proposal from the Commission.[18] It is always necessary to look at a particular Treaty Article, which will specify the legislative procedure applicable in that area. The reach of the ordinary legislative procedure has been extended to cover more areas than hitherto, including, for example, agriculture,[19] services,[20] asylum and immigration,[21] the structural and cohesion funds,[22] and the creation of specialized courts.[23] The European Parliament and the Council must meet in public when considering and voting on a draft legislative act.[24] The ordinary legislative procedure is set out in Article 294 TFEU and, as the name suggests, it is the normal method for making EU legislation.

1. Where reference is made in the Treaties to the ordinary legislative procedure for the adoption of an act, the following procedure shall apply.

2. The Commission shall submit a proposal to the European Parliament and the Council.

FIRST READING

3. The European Parliament shall adopt its position at first reading and communicate it to the Council.

4. If the Council approves the European Parliament's position, the act concerned shall be adopted in the wording which corresponds to the position of the European Parliament.

5. If the Council does not approve the European Parliament's position, it shall adopt its position at first reading and communicate it to the European Parliament.

6. The Council shall inform the European Parliament fully of the reasons which led it to adopt its position at first reading. The Commission shall inform the European Parliament fully of its position.

SECOND READING

7. If, within three months of such communication, the European Parliament:

(a) approves the Council's position at first reading or has not taken a decision, the act concerned shall be deemed to have been adopted in the wording which corresponds to the position of the Council;

(b) rejects, by a majority of its component members, the Council's position at first reading, the proposed act shall be deemed not to have been adopted;

(c) proposes, by a majority of its component members, amendments to the Council's position at first reading, the text thus amended shall be forwarded to the Council and to the Commission, which shall deliver an opinion on those amendments.

[16] Arts 14(1) and 16(1) TEU.
[17] Arts 289 and 294 TFEU.
[18] Art 289(1) TFEU.
[19] Art 43(2) TFEU.
[20] Art 56 TFEU.
[21] Arts 77–80 TFEU.
[22] Art 177 TFEU.
[23] Art 257 TFEU.
[24] Art 15(2) TFEU.

8. If, within three months of receiving the European Parliament's amendments, the Council, acting by a qualified majority:

(a) approves all those amendments, the act in question shall be deemed to have been adopted;

(b) does not approve all the amendments, the President of the Council, in agreement with the President of the European Parliament, shall within six weeks convene a meeting of the Conciliation Committee.

9. The Council shall act unanimously on the amendments on which the Commission has delivered a negative opinion.

CONCILIATION

10. The Conciliation Committee, which shall be composed of the members of the Council or their representatives and an equal number of members representing the European Parliament, shall have the task of reaching agreement on a joint text, by a qualified majority of the members of the Council or their representatives and by a majority of the members representing the European Parliament within six weeks of its being convened, on the basis of the positions of the European Parliament and the Council at second reading.

11. The Commission shall take part in the Conciliation Committee's proceedings and shall take all necessary initiatives with a view to reconciling the positions of the European Parliament and the Council.

12. If, within six weeks of its being convened, the Conciliation Committee does not approve the joint text, the proposed act shall be deemed not to have been adopted.

THIRD READING

13. If, within that period, the Conciliation Committee approves a joint text, the European Parliament, acting by a majority of the votes cast, and the Council, acting by a qualified majority, shall each have a period of six weeks from that approval in which to adopt the act in question in accordance with the joint text. If they fail to do so, the proposed act shall be deemed not to have been adopted.

14. The periods of three months and six weeks referred to in this Article shall be extended by a maximum of one month and two weeks respectively at the initiative of the European Parliament or the Council.

SPECIAL PROVISIONS

15. Where, in the cases provided for in the Treaties, a legislative act is submitted to the ordinary legislative procedure on the initiative of a group of Member States, on a recommendation by the European Central Bank, or at the request of the Court of Justice, paragraph 2, the second sentence of paragraph 6, and paragraph 9 shall not apply.

In such cases, the European Parliament and the Council shall communicate the proposed act to the Commission with their positions at first and second readings. The European Parliament or the Council may request the opinion of the Commission throughout the procedure, which the Commission may also deliver on its own initiative. It may also, if it deems it necessary, take part in the Conciliation Committee in accordance with paragraph 11.

(c) ORDINARY LEGISLATIVE PROCEDURE: STAGES IN THE PROCESS

(i) *First Reading*

It is important to understand the stages that operate within Article 294 TFEU. It is the Commission that submits its proposal to the EP and the Council.[25] There is no time limit for the first reading, either for the EP or the Council. The references to three-month and six-week time limits in other parts of the process can be extended by one month and two weeks respectively at the initiative of the EP or Council.[26]

The EP has two readings, the first of which occurs when the EP adopts its position and communicates this to the Council.[27] The legislative proposal will initially be considered by the relevant EP committee. Before this committee proceeds to the final vote on a proposal for a legislative act, it asks the Commission to state its position on amendments to the proposal adopted by the committee. It also asks the Council to comment. If the Commission is not in a position to make such a statement, or declares that it is not prepared to accept all the amendments adopted by the committee, then the committee may postpone the final vote.[28] The amendments proposed by the relevant EP committee are then considered and voted on by the EP in plenary session. It is the resolution that results from this vote that constitutes the EP's position that is then sent to the Council.[29] It is possible, although rare, for the EP to reject the Commission proposal at first reading stage.[30] Where the Commission proposal is approved, subject to amendments adopted in the EP plenary session, the vote on the draft legislative resolution is postponed until the Commission has stated its position on each of the EP's amendments.[31] If the Commission states that it does not intend to adopt all the EP's amendments, the EP may decide to postpone the vote and refer the matter back to the relevant committee.[32] Subject to this, the EP's position is then sent to the Council.

If the Council approves the EP's position the legislative act is adopted in the wording that corresponds to the position of the EP.[33] This is subject to the caveat that as long as the Council has not acted, the Commission can alter its proposal at any time prior to the adoption of a Union act.[34] This power is important, since it gives the Commission the legal foundation for continuing involvement in the enactment of legislative acts under the ordinary legislative procedure, even at the first reading stage. The power can be used by the Commission if it does not like alterations to the original proposal made by the EP, more especially if it feels that the Council might agree with such amendments. The EP may however request that the proposal should be referred back to it if the Commission substantially amends its proposal, except where this is done to accommodate the EP's position.[35]

The Council may not agree with the EP's position at first reading. The Council may not approve all the EP's first-reading amendments, or it may have other amendments of its own. If this happens the Council communicates a reasoned explanation of its position to the EP, and the Commission also informs the EP of its position.[36]

[25] Art 294(2) TFEU. Where, exceptionally, this is not so, the ordinary legislative procedure is modified: Art 294(15) TFEU.

[34] Art 293(2) TFEU.
[35] Rules of Procedure of the European Parliament (n 5) Rule 59.
[36] Art 294(5)–(6) TFEU.

(ii) *Second Reading*

The ordinary legislative procedure then moves to the second reading. The Council's position is communicated to the relevant EP committee, which will attempt to broker compromise between the Council, Commission, and EP.[37] The EP has the following options, which can be used within three months. It can approve the position taken by the Council, in which case the act is adopted in the format that corresponds to the wording of the Council's position. This also occurs if the EP takes no action at second reading.[38] The EP may reject the Council's first reading position by a majority of its component members, in which case the act is deemed not to have been adopted.[39] The EP's third option is to propose by a majority of its members second reading amendments to the Council's position.

The EP has imposed limits on the second reading amendments that it will propose: they are only admissible if they seek to restore wholly or in part the EP's first reading position, or to reach a compromise between the EP and Council, or to amend part of the Council's position that was not included in the initial proposal, or to take account of a new fact situation.[40] The amended text is forwarded to the Council and Commission, which deliver an opinion on the amendments.[41]

The ball is then back in the Council's court. It may within three months approve the EP's amendments, in which case the text is adopted in that format.[42] This is subject to the caveat that the Council must act unanimously in relation to amendments on which the Commission has expressed a negative opinion.[43] The Council may, alternatively, not approve all of the EP's second reading amendments, in which case the Conciliation Committee comes into operation.[44]

(iii) *Conciliation*

The Conciliation Committee is composed of equal numbers from the EP and Council, and the Commission is fully involved. The object is to secure agreement on a joint text, but if this cannot be achieved within six weeks the act is deemed not to have been adopted.[45] If the Conciliation Committee is successful the agreed text must be approved within six weeks by the EP and the Council, failing which the act is deemed not to have been adopted.[46]

(D) ORDINARY LEGISLATIVE PROCEDURE: PRACTICAL OPERATION

The ordinary legislative procedure in Article 294 has been successful in practice, subject to the important caveat made below, in that it has accommodated the differing interests that have a stake in the legislative process, the EP, Council, and Commission.[47] The emphasis throughout the procedure is on

compromise and dialogue, so as to facilitate the successful passage of the legislative act. This is reflected in the EP's Rules of Procedure, mentioned above, when explaining the stages of the ordinary legislative procedure, and it is evident once again in the Joint Declaration[48] and Framework Agreement between the EP and Commission[49] appended to those Rules of Procedure. In the first decade of co-decision, the predecessor to the ordinary legislative procedure, 20 per cent of the Parliament's second reading amendments to the Council's common position were accepted in their entirety during the conciliation procedure, 70 per cent were the subject of a compromise, and only 12 per cent were rejected.[50]

It is important to understand that not all the stages of Article 294 will be gone through for any particular legislative act. During the Parliamentary session 1999–2004, 115 co-decision dossiers, 28 per cent, were concluded at first reading; 200 dossiers, 50 per cent, at second reading; and 84 dossiers, 22 per cent, through conciliation.[51]

It is equally important to understand that the practical operation of Article 294 has been modified in practice through the institutionalization of trilogues, which contain representatives from the Council, EP, and Commission, normally no more than ten from each institution, the aim being to facilitate compromise.[52] They originated as informal meetings that preceded formal meetings of the Conciliation Committee, and have been common since the mid-1990s. Trilogues now feature at all stages of the ordinary legislative procedure,[53] and are increasingly used to broker inter-institutional compromise at first reading and prior to second reading, thereby limiting the potential for meaningful dialogue by a broader range of members of the European Parliament and Council.[54]

The scale of this change is brought home from the Report of the Vice-Presidents responsible for Conciliation. The contrast with the figures from the EP session 1999–2004 is striking. Thus in the period 2004–2009 72 per cent of legislative acts were concluded at first reading, with another 10.8 per cent at early second reading, largely as a result of increased use of such informal negotiations.[55] This is, as Bunyan states, regrettable because 'deals' are done in secret, with no readily available documents, and because 'the process removes meaningful debate, disagreements, options, votes from both the Committee meetings and the plenary session'.[56]

(E) ORDINARY LEGISLATIVE PROCEDURE: POWER DYNAMICS

There has been disagreement about the particular 'power dynamics' that operate within Article 294 and disagreement also about the relative power of the EP under co-decision and other legislative procedures.[57]

It is nonetheless clear that the EP has used its veto power under Article 294 sparingly. This does not mean that such power is ineffective. Decision-making under the shadow of the veto was, as we shall see below, common within the Council when the Luxembourg Accords imposed a *de facto* unanimity requirement, notwithstanding that actual use of the veto was relatively rare. So too here, the rare use of the veto by the EP does not alter the fact that the EP must accept the measure if it is to become law. The EP's power is further enhanced in relation to the Council because Article 294 read with Article 293(1) TFEU requires unanimity in the Council if it seeks to amend a Commission proposal,[58] while requiring only a qualified majority where the Council accepts amendments from the EP.

It is more difficult to generalize about the nature of the amendments that the EP manages to secure. There is research indicating that the EP amendments modify the Commission proposal, but do not significantly alter it.[59] This is to some extent unsurprising, since most important draft legislative proposals will have been discussed with the EP and Council/Coreper before the formal Article 294 procedure is initiated, thereby accommodating diverse opinion at that early stage. Where this dialogic process still leaves major differences of view, the EP and indeed Council may well propose more far-reaching amendments to the formal legislation, as exemplified by the extensive EP amendments to the Services Directive, forcing the Commission to modify the measure significantly.[60]

It is also important not to overlook the power of the Commission within the Article 294 procedure. It has the power to withdraw a proposed measure before it is adopted and submit a modified version, or refuse to proceed again if it feels that any such measure will be amended in ways to which it is fundamentally averse. These are admittedly rather blunt tools, but useful nonetheless. In any event the Commission has more 'fine-tuned' modes of influence. Thus it will routinely respond in detail to, for example, proposed EP amendments, indicating which it feels able to accept and which not. This will often form the foundation for dialogue between Commission and EP as to what will be acceptable to both players. The Commission moreover has the 'leverage' that EP second-reading amendments in relation to which the Commission has delivered a negative opinion can be accepted by the Council only if there is unanimity.[61]

(F) ORDINARY LEGISLATIVE PROCEDURE: NORMATIVE FOUNDATIONS

Article 294 has a secure normative foundation. The EP has long pressed for a co-equal role in the legislative process with the Council. The modifications introduced by the Maastricht and Amsterdam Treaties went a considerable way to achieving this goal through the co-decision procedure. The Lisbon Treaty continued this process. The change in nomenclature from co-decision to the ordinary legislative procedure emphasized that legislative authority was shared between the EP and Council. The extension of the ordinary legislative procedure to new areas was a natural development, building on what occurred in earlier Treaty reform. It enhanced the legitimacy of EU legislation and its democratic credentials by enabling the EP to have input into the making of legislation in these areas.

[61] Art 294(9) TFEU.

4 LEGISLATIVE ACTS: SPECIAL LEGISLATIVE PROCEDURE

Article 289(2) TFEU provides for what is termed a special legislative procedure. This applies in the specific cases provided for by the Treaties. The special legislative procedure takes the form of a regulation, directive, or decision adopted by the EP with the participation of the Council, or by the Council with the participation of the EP. Legal acts adopted by the special legislative procedure constitute legislative acts.[62] It should however be noted that the general 'passerelle' clause of the Lisbon Treaty provides that where the TFEU requires the special legislative procedure, the European Council may adopt a unanimous decision with the consent of the EP allowing for the adoption of such acts in accordance with the ordinary legislative procedure, which takes effect if there is no opposition from a national parliament.[63]

It is only by looking at particular Treaty provisions that one can understand what the special legislative procedure means. In most instances it signifies that the legal act is adopted by the Council unanimously, combined with a requirement of consent of, or more commonly consultation with, the EP.[64] In a few instances, notably those concerned with the organization of the EP, the special legislative procedure signifies that the EP adopts the legal act after approval from the Council.[65]

The pre-Lisbon case law will remain relevant in those areas where the special legislative procedure provides for a legislative act to be adopted by the Council after consultation with the EP, insofar as that jurisprudence specifies what consultation demands. Thus it is clear that the Council must wait for the Parliament's opinion. If it does not the measure may be annulled.[66] The EP may have to be re-consulted where there are important changes to the measure, not prompted by the EP itself, after the initial consultation and prior to its adoption by the Council.[67] Nonetheless, a bare requirement to consult the European Parliament is all that is required. The Council is not bound to adopt the Parliament's opinion. Particular Treaty Articles can also stipulate that the Committee of the Regions or the Economic and Social Committee should be consulted.

The special legislative procedure may also, as seen above, stipulate that a measure should be adopted by the Council acting unanimously with the consent of the EP, as opposed to consultation. There are several Treaty Articles framed in this manner, and not surprisingly they deal with sensitive issues over which the EU has competence, such as additions to citizens' rights, establishment of a European Public Prosecutor, creation of a uniform method for electing MEPs, and aspects of the EU's finances.[68] It should also be noted for the sake of clarity that the EP's consent may be required for the adoption of other measures, the distinguishing feature being that such measures are not said to be enacted by a special legislative procedure and do not therefore constitute legislative acts for the purposes of Article 289 TFEU.[69]

[69] See, eg, Arts 7, 14(2), 48(3), 48(7), 49, 50(2), TEU; Arts 82(2)(d); 83(1) para 3, 86(4), 218(6)(a)(i)–(iv), 312(2), 329(1), 352 TFEU.

The EP's Rules of Procedure indicate the process used in deciding whether to consent to a measure.[70] The EP takes its decision on the basis of a recommendation from the committee responsible for approving or rejecting the measure. The general principle is that the EP's decision is by a single vote, and no amendments are tabled. The majority required for the adoption of the consent is that specified in the relevant Article of the TEU or TFEU. Special rules apply in the case of consent required for accession treaties, international agreements, and determination of a serious and persistent breach of common principles by a Member State.[71] Where the EP's consent is required for a proposed legislative act or an envisaged international agreement, the committee responsible may decide, in the interests of achieving a positive outcome of the procedure, to present an interim report on the proposal to the EP, including a motion for a resolution containing recommendations for modification or implementation of the proposed act.

5 LEGISLATIVE ACTS: COUNCIL VOTING REQUIREMENTS

(A) PRE-LISBON

Prior to the Lisbon Treaty, the EC Treaty provided that the Council should vote by unanimity, simple majority, or qualified majority. The areas to which qualified majority voting applied were increased over time.

These formal legal powers were for some time overshadowed by the Luxembourg Compromise. This was the result of a political crisis in the Community in the mid-1960s, and coincided with the shift to qualified-majority voting in the Council. In essence the Compromise provided that when majority voting applied to a topic which concerned the important interests of states, they should attempt to reach a solution acceptable to all, and France added the rider that discussion should continue until unanimity was attained. The Compromise fostered a climate in which majority voting prejudicial to the interests of a particular state was avoided. The 'threat' that a Member State would exercise a *de facto* veto power did not enhance the speed of Community decision-making.

The Luxembourg Compromise was not formally abolished, because it never formally existed in legal terms. However, the climate in the Community post-1986 rendered it less likely that states would attempt to use such power.[72] Subsequent Treaty amendments generally required greater use of qualified-majority voting, and reflected a shift in Member State perceptions about the nature of the Community, which made it less likely that exclusively national interests would be regarded as a valid rationale for the exercise of a veto. Moreover, Member States acknowledged that there had to be an extension of qualified-majority voting in an expanded Union. Unanimity would often be synonymous with inaction, since one state out of twenty-seven would almost certainly object. The very fact that use of the veto is now less readily accepted than hitherto means that Member States will exert more pressure at other points of the decision-making system, so as to ensure that the measure is acceptable to them. It should also be acknowledged that the Council will search for consensus even where the formal voting rules provide for a qualified majority,[73] and approximately 80 per cent of decisions are taken consensually.

(B) POST-LISBON

The Lisbon Treaty provides for different rules on voting by the Council. The Treaty can prescribe unanimity in the Council, although abstentions do not prevent the adoption of acts for which unanimity is required.[74] It may specify that the Council should vote by simple majority, which signifies a majority of its component members.[75] The general rule under the Lisbon Treaty is, however, that Council voting is by qualified majority, unless the Treaty provides otherwise.[76]

The Lisbon Treaty embodies a general 'passerelle' clause enabling modification to the voting rules in the Council. This is contained in Article 48(7) TEU. It states that where the TFEU or Title V of the TEU provides for the Council to act by unanimity in a given area or case, the European Council may adopt a decision authorizing the Council to act by a qualified majority in that area or in that case, subject to the caveat that this cannot apply to decisions with military implications or those in the area of defence. The European Council when making such decisions acts by unanimity after obtaining the consent of the European Parliament, which shall be given by a majority of its component members. Any such initiative taken by the European Council must be notified to the national parliaments. If a national parliament makes known its opposition within six months of the date of such notification, the decision referred to above shall not be adopted. In the absence of opposition, the European Council may adopt the decision.

The Lisbon Treaty increased the areas to which qualified majority voting applies, although unanimity is still required in over seventy areas. It will come as no surprise that there was considerable disagreement about the requirements for a qualified majority in the Council and the shift from unanimity to qualified majority. The requirements for a qualified majority have always been a battleground between the Member States, and more especially between small, medium-sized, and large Member States. Intra-institutional tensions have characterized these debates.

The provisions in the Lisbon Treaty on the definition of a qualified majority are complex. The basic rule that will operate from 1 November 2014 is set out in Article 16(4) TEU. A qualified majority is defined as at least 55 per cent of the members of the Council, comprising at least fifteen of them and representing Member States comprising at least 65 per cent of the population of the Union. A blocking minority must include at least four Council members, failing which the qualified majority shall be deemed attained. There are therefore three criteria to be taken into account for a qualified majority: a certain percentage of Member States in the Council; a certain number of Member States; and a certain percentage of the EU's population.

The default rule defining a qualified majority is, however, subject to exceptions. Thus, where the Council does not act on a proposal from the Commission or the High Representative for Foreign Affairs the qualified majority must be 72 per cent of the members of the Council, comprising 65 per cent of the EU's population.[77] It is therefore more difficult for the Council to adopt a measure in the relatively rare instances where it does not act on a proposal from the Commission or from the High Representative. There are also separate rules specifying the requirements for a qualified majority where not all Member States vote in the Council.[78]

[74] Art 238(4) TFEU.
[75] Art 238(1) TFEU.
[76] Art 16(3) TEU.
[77] Art 238(2) TFEU.
[78] Art 238(3) TFEU. A qualified majority is at least 55 per cent of the members of the Council representing the participating Member States, comprising at least 65 per cent of the population of these States. A blocking minority must include at least the minimum number of Council members representing more than 35 per cent of the population of the participating Member States, plus one member, failing which the qualified majority shall be deemed attained. These rules are subject to qualification where the Council does not act on a proposal from the Commission or from the High Representative: the qualified majority must then be at least 72 per cent of the members of the Council representing the participating Member States, comprising at least 65 per cent of the population of these States.

The rules that operate until 31 October 2014, and the transitional rules applicable between 1 November 2014 and 31 March 2017, are set out in a Protocol attached to the Lisbon Treaty.[79] Between 1 November 2014 and 31 March 2017, when an act is to be adopted by qualified majority a member of the Council can request that it be adopted in accordance with the qualified majority as defined under the rules in the Nice Treaty.[80]

It has been estimated that the voting rules in the Lisbon Treaty will increase the probability of securing the passage of legislation through the Council as compared with those under the Nice Treaty.[81] The demographic component of the new rules also increases the relative power of the larger Member States in the Council.[82] The significance of this depends however on voting behaviour post-Lisbon. Thus academic study has shown that voting in the Council has been relatively rare, even in areas where qualified-majority voting operates, and that decision-making by consensus has been the norm. The authors accept that voting rules remain significant, in part because they provide the 'shadow' against which consensus operates in the Council and preliminary bodies such as Coreper. This does not alter the fact that explicit voting has been rare and that when it occurs the dissentient is often a single state.[83]

The shift towards qualified-majority voting in more areas raised, not surprisingly, critiques of loss of sovereignty through surrender of the national veto that accompanies unanimity. The most obvious response is that unanimity renders decision-making excessively difficult in a Union of twenty-seven Member States.

There is in addition a less obvious, but equally important response. The assumption that unanimity is the best protection of national sovereignty is based implicitly on the argument that sovereignty is best safeguarded by maximizing veto points and inaction. This may be true, but it may not. It is axiomatic that if a veto power exists it resides with every Member State. Whether unanimity is the best protector of national sovereignty depends therefore on whether a state believes that maximizing the possibility of inaction through multiple veto points is better for the national interest than a qualified-majority voting rule which increases the possibility of action, with some attendant risk that the particular state will be forced to accept a measure that it dislikes. This in turn depends on whether a state believes that if there is a unanimity rule it is more likely to be 'vetoed against', thereby preventing action which it believes to be desirable, than it is to be an 'exerciser of the veto' itself.

A state may decide on this calculus that the national interest is better protected via qualified majority than unanimity. This was part of the rationale for the UK Conservative Party's acceptance of one of the most important shifts from unanimity to qualified majority in the EU's history, through acceptance in the Single European Act 1986 of Article 95 EC, which became the principal vehicle for single market legislation. The unanimity rule in Article 94 impeded the market liberalization desired by the Conservative Party and Prime Minister Thatcher, hence the willingness to sacrifice the veto for the enhanced possibility of Community action.

6 DELEGATED ACTS: ENACTMENT AND CONTROL

(A) PRE-LISBON: THE RATIONALE FOR COMITOLOGY

The schema of legal acts in the Lisbon Treaty was considered in the previous chapter.[84] It will be recalled that the Lisbon Treaty distinguishes between legislative acts, delegated acts, and implementing acts. The impact of the Lisbon Treaty on the making of delegated acts can only be appreciated by understanding the previous law.

Delegation of power to make regulations has been present since the inception of the EEC. There are many areas of policy, such as agriculture, which require numerous regulations, often passed quickly to cope with changing market circumstances. If the standard methods of enacting legislation were to be applied the process would grind to a halt, since the relevant acts could not be enacted with sufficient speed. This explains why the Council, through a 'parent regulation', authorized the Commission to enact more specific regulations in a particular area.

The Council was not, however, willing to give the Commission a blank cheque to regulate in this manner. It made the exercise of delegated power subject to institutional constraints, in the form of committees through which Member State interests could be represented. This was so for two complementary reasons: there might be disagreements between the states themselves as to the content of the more detailed regulations that should be made; and the Council was wary of the federalizing tendencies of the Commission, with the consequence that it was unwilling to delegate power without checks to ensure the representation of Member State interests.

The Council's 'solution' was to condition the exercise of delegated power on the approval of a committee composed of Member State representatives. This system came to be known as Comitology.[85] There was no express warrant for such committees in the original EEC Treaty, and their legality was challenged before the Court. The ECJ upheld the validity of the committee system, reasoning that if the Treaty gave power to the Council to delegate to the Commission, then it could do so subject to conditions.[86] The SEA however modified Article 202 EC in order to provide a secure foundation for this regime. This was followed shortly thereafter by the Comitology Decision, which rationalized the committee structure.[87] This Decision was revised in 1999, and gave an increased role to the EP in the making of these Comitology regulations, although it did not place the EP on an equal footing with the Council.[88] The 1999 Comitology Decision was itself revised in 2006, with enhanced powers being given to the EP.[89] The Comitology Decision embodied a regime of committee oversight, the nature of which depended on the type of committee procedure that was chosen for a particular area.

The *management committee procedure*[90] was used for management measures, such as agricultural policy, and for the implementation of programmes with substantial budgetary implications. The committee was composed of Member State representatives and chaired by the Commission. The Commission submitted a proposal, and the committee then delivered an opinion within a time limit

[90] Council Decision 99/468 (n 88) Art 4.

set by the Commission chairman. The committee voted in the same manner as the Council itself, but the Commission had no vote. The Commission adopted measures that applied immediately. However, if the measure *was not in accordance* with the opinion of the committee, the Commission had to communicate this to the Council. The Council could then take a different decision within three months. Thus the committee had to vote against the measure for it to be sent back to the Council.

The *regulatory committee procedure*[91] was used for measures of general scope designed to apply essential provisions of basic instruments, such as those concerned with health and safety. This gave Member State representatives more power, because in effect the measure had to be referred back to the Council unless the committee voted in favour of it. There was also a *regulatory procedure with scrutiny*[92] introduced in 2006. The novelty of this procedure was that it accorded a greater role to the EP in cases where the primary legislation was made under the co-decision procedure and provided for the adoption of measures of general scope designed to amend or supplement non-essential elements of that instrument.

There was also an *advisory committee procedure*,[93] which, as the name would suggest, meant that the national representatives gave advice on the Commission proposal. The Commission was not bound by this opinion, although it took the 'utmost account' of it.

(B) POST-LISBON DELEGATED ACTS: DEMISE OF COMITOLOGY

The Lisbon Treaty made significant changes in the way in which delegated acts are made and overseen. Article 290 TFEU is the relevant Treaty provision.

> 1. A legislative act may delegate to the Commission the power to adopt non-legislative acts of general application to supplement or amend certain non-essential elements of the legislative act.
>
> The objectives, content, scope and duration of the delegation of power shall be explicitly defined in the legislative acts. The essential elements of an area shall be reserved for the legislative act and accordingly shall not be the subject of a delegation of power.
>
> 2. Legislative acts shall explicitly lay down the conditions to which the delegation is subject; these conditions may be as follows:
>
> (a) the European Parliament or the Council may decide to revoke the delegation;
>
> (a) the delegated act may enter into force only if no objection has been expressed by the European Parliament or the Council within a period set by the legislative act.
>
> For the purposes of (a) and (b), the European Parliament shall act by a majority of its component members, and the Council by a qualified majority.
>
> 3. The adjective 'delegated' shall be inserted in the title of delegated acts.

It is necessary to understand the political background that led to Article 290.[94] The Commission regarded the Comitology regime as an unwarranted constraint on its executive autonomy. It could tolerate purely advisory committees, but it was not happy with management and regulatory committees. Its strategy for over twenty years was to devise some method whereby it could be freed from these limitations.[95] It advocated a regime of constraints on non-legislative acts of the kind that are now contained

in Article 290 TFEU, with the hope that this might lead to the demise of management and regulatory committees. The EP was also unhappy with Comitology, since the original Comitology schema concentrated power on Member State representatives and the Council. Subsequent modifications to the regime increased the EP's role within Comitology, notably through the creation of the regulatory procedure with scrutiny, but it did not give the EP institutional parity with the Council.

Article 290 TFEU makes no mention of Comitology, although Article 291 TFEU makes provision for a version of Comitology in relation to implementing acts, as we shall see below. The reality was nonetheless that Comitology was used pre-Lisbon in relation to what are now termed delegated acts, and not just in relation to implementing acts as they are defined in the Lisbon Treaty.[96] It is unlikely that the Member States appreciated the possible demise of Comitology in the terrain where it has been used for nearly fifty years. This may seem surprising, but it is less so when it is recognized that there was scant deliberation about the proposals for legal acts within the plenary sessions of the Convention on the Future of Europe, in part because of time constraints and in part because the subject matter was felt to be too technical.

The institutional deliberations concerning the workings of Article 290 TFEU post ratification of the Lisbon Treaty have been premised on the assumption that old-style management and regulatory committees will not operate in the post-Lisbon world. Scrutiny of delegated acts will be undertaken through advisory committees of national experts and committees of the European Parliament.[97] The details of the new arrangements will be embodied in an Inter-institutional Agreement or Common Understanding,[98] but this should not mask the differences between the Commission, Council, and European Parliament as to the precise role of such committees in the process of enacting delegated acts.[99]

It is therefore necessary to understand the two types of control that operate within Article 290. There is an *ex ante* constraint, to the effect that the legislative act must lay down the essential principles on the relevant topic. The *ex post* controls that can be exercised by the Council or the European Parliament are revocation of the delegation or veto of the delegated act.

(c) EVALUATION

(i) *Pre-Lisbon*

The effectiveness of the Lisbon controls on delegated acts will be considered below. It is best seen against the background of the previous debate concerning Comitology. There was a considerable literature on the Comitology regime prior to the Lisbon Treaty, which was much discussed by political scientists and lawyers.[100]

Rational choice institutionalists regarded it as an exemplification of their principal–agent thesis. Member State principals delegate four functions to supranational agents: monitoring compliance; the resolution of incomplete contracts among principals; the adoption of regulations in areas where the principals would be biased or uninformed; and setting the legislative agenda so as to avoid the 'endless cycling' that would otherwise result if this power were exercised by the principals themselves.[101] The

[101] M Pollack, *The Engines of Integration, Delegation, Agency and Agenda Setting in the EU* (Oxford University Press, 2003) 6.

principals must however ensure insofar as possible that the agents do not stray from the preferences of the principals. Thus on this view Comitology constituted a control mechanism whereby Member State principals exerted control over supranational agents. The Member State principals recognized the need for delegation of power over secondary norms to the supranational agent, the Commission, but did not wish to give it a blank cheque, hence the creation of committees through which Member State preferences could be expressed, with the threat of recourse to the Council if agreement could not be reached with the Commission. It is assumed that the representatives on Comitology reflect their Member States' preferences and bargain within the committees.[102] The variants of committee procedure reflect the Member States' ability to impose the degree of control that best suit their interests.

The Comitology regime was also defended, most prominently by Joerges and Neyer, who saw it in terms of deliberative supranationalism.[103] The essence of their argument was that the national delegates that take part in the committees will often regard themselves as part of a team dealing with a transnational problem. Comitology was portrayed as a network of European and national actors, with the Commission acting as coordinator. The national participants in the deliberative process were willing to call their own preferences into question in searching for a Community solution. This central core of the deliberative supranationalism thesis had some force.

There were nonetheless problems with this view of Comitology, which related to the constraints placed on consensual deliberation, the role accorded to the EP and the exclusion from the rule-making process of others who might legitimately wish to have a voice on the resultant rule.[104] Concerns were voiced about the exclusion of the EP, the undemocratic nature of the process, the lack of accountability and transparency, and the corporatist nature of the process. Thus Weiler, while acknowledging the importance of Joerges and Neyer's insights concerning the deliberative style of Comitology and the search for solutions that transcend purely national interests,[105] was nonetheless troubled by the decisional autonomy of Comitology. Committee members might be unaware of 'the profound political and moral choices involved in their determinations and of their shared biases',[106] and that the shared understandings that prevail between the committee members might mean that 'moral premises are presumed but not discussed'.[107]

(ii) *Post-Lisbon*

It might be felt in the light of the above that the demise of Comitology in relation to what are now termed delegated acts is not to be regretted. Any such conclusion is dependent in part on the efficacy of the post-Lisbon controls over delegated acts.

The *ex ante* constraint, to the effect that the legislative act must lay down the essential principles on the relevant topic, was a condition in the ECJ's prior case law, but it was not interpreted rigorously.[108] It is therefore doubtful whether it will furnish much by way of control in this area.

The *ex post* controls that can be exercised by the Council or the European Parliament are, as we have seen, revocation of the delegation, or veto of the delegated act. This has increased the European Parliament's power over delegated acts, but not that of the Council, which could under the previous regime veto a secondary norm pursuant to the Comitology procedures. The limits of this aspect of the new regime must moreover be firmly borne in mind.

First, neither the Council nor the European Parliament is accorded any formal right to propose amendments to a delegated act, but only the power to prevent its entry into force. While threat of a veto might act as a lever to secure amendment, this does not alter the fact that Article 290 gives no such formal power.

Secondly, the exercise of the veto power is crucially dependent on understanding the proposed measure. The Council and European Parliament cannot decide whether to object to the delegated act unless they understand it. The Member State representatives on the Council clearly have neither the time nor expertise to perform this task unaided. The European Parliament committees might develop such expertise. They have however hitherto drawn on informational resources from Comitology committees, but assuming that such committees cease to operate in relation to delegated acts, then the relevant European Parliament committee will have less material to help it to comprehend the relevant measure and decide whether to object to it. The retention of advisory committees of Member State representatives under the new regime will not necessarily avail the European Parliament, since it will not have the same linkage to such committees of the kind that existed hitherto. This explains the emphasis placed by the European Parliament on information flows concerning delegated acts to its own committees in order that they can exercise adequate scrutiny over such acts.[109]

Thirdly, these difficulties will be more pronounced, given that the European Parliament and Council will have to raise any such objection within a short period specified by the legislative act, which will normally be somewhere between two and three months.

The new regime for delegated acts embodies choices and values which are not fully revealed by the bare text of Article 290. The contending forces that led to Article 290 and the likely effect of it in practice are considered in the following extract.

Paul Craig, The Lisbon Treaty, Law, Politics and Treaty Reform[110]

The choice is therefore stark. Advisory committees might de facto be transformed into more powerful bodies, furnishing the detailed advice on which the Council will decide to exercise its veto, in which case we would in effect have déjà vu all over again, and the reinvention of the old order. The alternative could be demise of management and regulatory committees in relation to delegated acts, and advisory committees not taking up 'the slack', with the consequential increase in Commission regulatory autonomy. Commentators may well differ as to the desirability of these outcomes. Those who believe that enactment of regulatory provisions pursuant to legislative acts falls naturally within the sphere of the 'executive function', which should reside with the Commission, will welcome the developments in the Lisbon Treaty. Those like the present author, who believe that it is often fortuitous whether things end up in primary legislation or in a delegated act, and who believe also that the latter may entail complex regulatory choices that are just as 'political' as the former, will disagree.

Triangular relationships often produce tensions and paradoxes, and the dynamic between Commission, Council and European Parliament in this area is no exception. The Committee on Legal Affairs expressed its regret that the Commission Communication on Article 290 appeared to 'understand neither the extent nor the significance of the changes in the Union's constitutional and legal

[109] Committee on Legal Affairs A-7 0110/2010 (n 96) 10.
[110] (Oxford University Press, 2010) 75–76.

framework ushered in by the Treaty of Lisbon'.[111] The reality is surely to the contrary. The Commission understood full well the implications of the new order, for which it had pressed for nearly two decades. The truth is that each corner of the institutional triangle had different goals which it sought to maximize.

For the Commission this was the embodiment in the Treaty of a regime like Article 290, which would enable it to press for the demise of management and regulatory committees. The fact that it did not then shout this from the roof tops in its Communication on Article 290 was simply sound political sense. For the European Parliament the demise of Comitology and formal equality of status with the Council was the major prize, in some quarters at least, as reflected in the views of the Legal Affairs Committee. The paradox here is that this may yet prove to be a Pyrrhic victory unless its committees really can perform the scrutiny functions demanded under the new regime without any direct connection to the informational resource hitherto provided by Comitology committees. For the Council the dominant theme was dropping the ball. There is no evidence that the Member States understood the full implications of the changes made by Article 290, which is not so surprising given that attention was concentrated on other institutional issues in the hectic first half of 2003. There was scant time for consideration of the hierarchy of norms in plenary sessions, and relatively few understood the arcane divide between delegated and implementing acts.

The paradox here may yet prove to be Council resilience in the face of formal Treaty norms. The Council has resisted attempts to prise away its power over secondary norms for forty years. Its attitude is unlikely to change overnight or in the next decade. If the Council cannot have management and regulatory committees it might well try to preserve the substance of the status quo ante by de facto investing the committees composed of their national representatives with powers analogous to those that existed hitherto.

7 IMPLEMENTING ACTS: ENACTMENT AND CONTROL

(A) THE LISBON SCHEMA

Article 291 TFEU is the Treaty provision dealing with implementing acts.

1. Member States shall adopt all measures of national law necessary to implement legally binding Union acts.

2. Where uniform conditions for implementing legally binding Union acts are needed, those acts shall confer implementing powers on the Commission, or, in duly justified specific cases and in the cases provided for in Articles 24 and 26 of the Treaty on European Union, on the Council.

3. For the purposes of paragraph 2, the European Parliament and the Council, acting by means of regulations in accordance with the ordinary legislative procedure, shall lay down in advance the rules and general principles concerning mechanisms for control by Member States of the Commission's exercise of implementing powers.

4. The word 'implementing' shall be inserted in the title of implementing acts.

The difficulties of distinguishing delegated and implementing acts were considered above.[112] The present focus will be on the controls relating to enactment of such measures. Prior to the Lisbon Treaty there was no formal distinction between delegated and implementing acts. Comitology was created

[111] Committee on Legal Affairs A-7 0110/2010 (n 96) 11.
[112] Ch 4.

as a method of Member State control over all secondary acts, including what are now delegated acts, but has now been excised from this terrain.[113] A revised version of Comitology however exists in relation to implementing acts, pursuant to Article 291(3) TFEU, but is not the same as the previous Comitology regime.

Regulation 182/2011 embodies the new Comitology regime under Article 291.[114] There are two procedures, the advisory procedure and the examination procedure, although the Regulation also makes provision for implementing acts to be immediately applicable on grounds of urgency.[115] The Commission submits a draft of the implementing act to the committee composed of Member State representatives, chaired by the Commission.[116] The Commission can revise the measure in the light of the committee discussion at any time before the committee has delivered its opinion.[117] The committee gives its opinion within a time limit set by the Commission.

The advisory procedure is the default procedure, in the sense that it is to be used except when the examination procedure is mandated.[118] Under the advisory procedure, as the name would indicate, the Commission decides on the implementing measures 'taking the utmost account of the conclusions'[119] from the committee deliberations.

The examination procedure applies in relation to implementing acts of general scope.[120] It also applies to other acts that relate to:[121] programmes with substantial implications; agriculture and fisheries; environment, security and safety or protection of the health or safety of humans, animals, or plants; common commercial policy; and taxation. This is subject to the caveat that the advisory procedure may be used even in these cases where it is considered to be 'duly justified'.[122] The new rules on the examination procedure provide for different outcomes depending on whether the committee votes in favour of the draft measure, against it, or delivers no opinion.

The implementing act will be passed if the committee delivers a *positive opinion*,[123] voting in accordance with the rules for qualified majority laid down in Article 16(4)–(5) TEU.[124] If it gives a *negative opinion* the Commission cannot adopt the acts. It can however submit a revised version to the committee, or submit the original version to the appeal committee.[125] The Commission can also adopt the acts even where there has been a negative opinion if adoption without delay is necessary to avoid creating a significant disruption of the markets in the area of agriculture, or a risk for the financial interests of the Union within the meaning of Article 325 TFEU. The Commission must then immediately submit the adopted acts to the appeal committee, and if it delivers a negative opinion on the adopted acts, the Commission must then repeal them. Where the appeal committee delivers a positive opinion or delivers no opinion, the acts shall remain in force.[126] There is in addition provision enabling the Commission to adopt the draft act in cases of urgency.[127] If the committee that examined the draft

act *delivers no opinion*, the default position is that the Commission can adopt the implementing act, save for certain types of case where *prima facie* it cannot do so.[128] However even in these instances it can submit a revised version of the draft measure to the committee, or take the original version to the appeal committee.

The Commission emphasized in its original proposal that control was to be exercised by the Member States, and that neither the Council nor the European Parliament was accorded a direct role on the committees, although they could have access to information about the proceedings.[129] This is reflected in the Regulation.[130] It provides that where the basic act is adopted under the ordinary legislative procedure, the EP or the Council may at any time indicate to the Commission that it considers a draft implementing act to exceed the implementing powers provided for in the basic act. The Commission has a duty to review the draft act, taking account of the views of the EP and Council. It is not however obliged to withdraw the act, but must rather inform the EP and the Council whether it intends to maintain, amend, or withdraw the draft implementing act. There are also provisions concerning information on Comitology committees and documentation to be made available to the EP and Council.[131]

(B) EVALUATION

The legal and practical operation of the new Comitology rules in relation to implementing acts remains to be seen. The Lisbon reforms relating to the hierarchy of norms were designed to simplify the pre-existing regime, but may well have created increased legal and institutional complexity. There are four reasons why this is so.

First, the divide between delegated and implementing acts is inherently problematic for the reasons considered in the previous chapter. The divide turns on whether the act amends or supplements the legislative act, in which case it must be a delegated act, or whether it does not do so, in which case it is an implementing act. This distinction is fraught with difficulty for the reasons given above.[132]

Secondly, it will not be clear whether a particular act falls into one category or another until it is made. Thus the mere fact that the primary legislative act makes provision for enactment of, for example, implementing acts pursuant to an article of the legislation cannot tell us whether a particular implementing act is lawful or not. This is because it is only by studying the particular 'implementing act' that one can decide whether it in fact supplements or amends the legislative act and therefore should have been made as a delegated act.

Thirdly, the distinction between delegated and implementing acts is nonetheless crucial under the Lisbon Treaty, since very different procedures and controls are prescribed in the two instances. The EP has no formal role in the committees established under Article 291. Nor indeed in formal terms does the Council, although the fact that the committee representatives are from the Member States may lead to some connection with ministerial representatives in the Council.

Finally, the Lisbon regime will lead to greater institutional complexity. There will be Comitology committees established pursuant to Article 291, which will, as before, be listed. There will however also be a whole world of advisory committees created by the Council and/or EP pursuant to Article 290, in order to enable these institutions to decide whether they should exercise their veto power, and there is no formal mechanism for such committees to be known or listed. The Article 290 committees will be distinct from those created under Article 291, and their membership will differ.

8 ENHANCED COOPERATION: CONDITIONS AND USE

The discussion thus far has been predicated on the assumption that legislation and other Union acts are made with the participation of all twenty-seven Member States. There was provision prior to the Lisbon Treaty whereby certain states could, subject to conditions, adopt acts even though not all Member States took part.[133] The political reality pre-Lisbon was however that while there was some flexibility in the application of Treaty Articles,[134] the provisions on enhanced cooperation did not provide the foundation for such initiatives.

The Lisbon Treaty has modified the provisions on enhanced cooperation, so as to render them easier to use in a Union of twenty-seven Member States, and they have now been used for the first time in relation to a regulation on divorce and legal separation. Article 20 TEU authorizes enhanced cooperation in accordance with the detailed conditions set out in the TFEU. It stipulates that such cooperation shall aim to further the objectives of the EU, protect its interests, and reinforce the integration process. There must be a minimum of nine Member States wishing to participate in order for enhanced cooperation to be used. The pre-Lisbon rules required eight out of fifteen states to participate, so the post-Lisbon number of nine out of twenty-seven is a significant relaxation in this respect. The cooperation must be open at any time to all Member States, in accordance with Article 328 TFEU. It is emphasized in Article 20(2) TEU that enhanced cooperation is a last resort, to be used where the Council has established that the objectives of such cooperation cannot be attained within a reasonable period by the EU as a whole.

All members of the Council can participate in its deliberations, but only those members representing Member States participating in enhanced cooperation take part in the vote, in accordance with the rules in Article 330 TFEU. The acts adopted in the framework of enhanced cooperation bind only participating Member States, and they do not in formal terms constitute part of the *acquis* that has to be accepted by candidate states for accession to the EU. The conditions for such cooperation are contained in Articles 326–327 TFEU, read together with Article 20 TEU.

Article 326

Any enhanced cooperation shall comply with the Treaties and Union law.

Such cooperation shall not undermine the internal market or economic, social and territorial cohesion. It shall not constitute a barrier to or discrimination in trade between Member States, nor shall it distort competition between them.

Article 327

Any enhanced cooperation shall respect the competences, rights and obligations of those Member States which do not participate in it. Those Member States shall not impede its implementation by the participating Member States.

The detailed rules concerning creation of enhanced cooperation are found in Articles 328 and 329 TFEU. The Lisbon provisions on enhanced cooperation also contain two passerelle clauses concerning voting rules and voting procedures respectively.[135] The Lisbon Treaty in addition contains

provisions relating to enhanced cooperation in other areas, such as judicial cooperation in criminal matters and police cooperation.[136]

9 EU DECISION-MAKING: PROCESS AND REALITY

(A) THE TEMPORAL DIMENSION

The discussion thus far has focused on the legislative procedures. To stop there would give only an imperfect grasp of the EU legislative process. We need to press further to understand the way in which EU decision-making works. There are different dimensions to this inquiry, one of which is temporal in nature: the way in which the role of the EU institutions in the decision-making process has developed over time. What follows does not purport to be a thorough historical analysis, but rather a thematic one. A central theme is the development of institutional structures outside the strict letter of the Treaty, as a response to tensions between the Council and Commission, since they embodied different conceptions of the Community.

The Council perceived it principally in intergovernmental terms, and this had both a substantive and a procedural dimension. In substantive terms, the Council was unclear precisely how far it wished to travel down the road of European integration. In procedural terms, intergovernmentalism connoted the idea that Member State interests should not readily be sacrificed to the Community good, and that the Council, as representative of those interests, should retain control over the development of Community policy.

The Commission had a more federalist conception of the Community. This, too, had a substantive and a procedural component. In substantive terms, it manifested itself in a commitment to proceed with attainment of the Community goals as expeditiously as possible, and to move beyond these to other matters that would further the process of integration. In procedural terms, the Commission's vision naturally inclined to use of majority voting, as dictated by the Treaty in many areas, with the consequence that the interests of a Member State might have to be sacrificed to achieve the greater Community good.

The original Rome Treaty divided power between Council and Commission, but in many respects it placed the Commission in the driving seat as regards the development of Community policy. This is evident from the Commission's right of legislative initiative; from the many other functions it was given; and from the fact that the voting rules, while requiring Council consent to a measure, also required unanimity for Council amendment.[137] The message was that, while the Council had to consent to legislation, it was not easy for it to alter the Commission's draft.

The first twenty years or so of the Community were marked by *de facto* changes in Community decision-making. The unifying theme was the increased dominance of the Council over the Commission, and the limiting of the federalist tendencies within the Commission by the intergovernmental impulses of the Council. Institutional developments outside the strict letter of the Treaty were the vehicle through which this was achieved.

The Luxembourg Accords were one such development. They were the prime example of negative intergovernmentalism: Member States could block measures they disliked which they felt touched their vital interests. Statistics on the number of occasions when this power was used are only part of the story, since threat of the veto shaped the Commission's policies.[138]

[136] Art 82 TFEU.
[137] Art 250(1) EC.
[138] K Neunreither, 'Transformation of a Political Role: Reconsidering the Case of the Commission of the European Communities' (1971–2) 10 JCMS 233.

The Council's intergovernmental orientation also had a more positive side to it. The Luxembourg Accords were fine if the ultimate objective was to veto a measure. But the Member States also desired more finely-tuned tools through which to influence legislation they wished to be enacted. The growing influence of Coreper, the establishment of management and regulatory committees, the increased use of Article 208 EC, and the evolution of the European Council were all features of positive intergovernmentalism. They increased Member State influence over Community legislation in complementary ways.

Coreper and the management/regulatory committees enabled the Council to have more formalized input into emergent legislation. Article 208 became a useful vehicle whereby the Council could suggest Community action in particular areas, while the European Council enabled Member States to discuss general issues of Community concern, outside the framework of the Council. The results of their deliberations were often 'binding', in the sense of laying down the parameters of future Community action, whether in relation to the size of the Common Agricultural Policy (CAP) budget or the timetable for moves towards closer economic union.

These developments contributed to the Euro-sclerosis that beset the Community during much of the 1970s, which had implications for the ECJ's role. This story has been told most fully in the important work of Joseph Weiler.[139] He explains how impediments to attainment of Community objectives through the political process led to the growing importance of normative supranationalism. The doctrines of direct effect, the supremacy of Community law, and pre-emption were central in this respect, enabling the ECJ to develop EC law, notwithstanding the difficulties in securing enactment through the legislative process.[140]

Many of the institutional developments which occurred outside the strict letter of the Treaty were accorded legal status through Treaty revisions. The management and regulatory committee structure attained a more secure footing by revision of Article 202 EC. The European Council was recognized by the SEA. Coreper was accorded a more formal status in Article 207 EC. It should, moreover, be noted that matters have changed since the 1970s and that the divide between institutions that are supranational and those that are intergovernmental is not as sharp as it might once have been.[141]

(B) THE INTER-INSTITUTIONAL DIMENSION

(i) *Planning the Legislative Agenda*

The institutional reforms in the SEA had a mixed impact on Community decision-making. In one respect they expedited decision-making by extending qualified-majority voting, as exemplified by Article 95 EC. In another respect the SEA made the legislative process more complex. The Parliament now had power through the cooperation procedure, and its views had to be accommodated. It became clear that there would have to be more inter-institutional cooperation in planning the overall legislative programme.[142] The system now operates as follows.[143]

The Commission on entering office publishes a five-year programme, setting out the strategic objectives for that period at a relatively high level of generality. Thus the programme for 2005–2009 focused on prosperity, solidarity, and security.[144]

[144] Strategic Objectives 2005–2009: Europe 2010, A Partnership for European Renewal, Prosperity, Solidarity, and Security, COM(2005)12 final.

The annual planning cycle begins with the Annual Policy Strategy (APS), which is designed to integrate decisions about priorities and resources more closely together.[145] The APS gives an annual strategic framework at Commission level and defines, early in the previous year, political priorities and initiatives for the following year. It also allocates the financial and human resources to these priority initiatives and establishes the overall resource framework. The President of the Commission presents the annual policy strategy to the Council and the European Parliament, launching a dialogue on the various policy areas with the other institutions. Based on the annual policy strategy and the dialogue with the European Council, Council, and the European Parliament, and taking into account progress in the budgetary process and operational planning, the College determines the Commission's work programme for the following year.

The revised APS thus forms the basis for the Commission's more detailed Work Programme for a particular year,[146] which will list the legislative and non-legislative measures to be introduced to attain the objectives agreed in the modified APS. This is presented to the Council and EP, normally in November. The Commission's annual Work Programme therefore translates the APS into policy objectives and a programme of decisions to be adopted by the Commission. It sets out major political priorities and identifies legislative initiatives, executive and other acts that the Commission intends to adopt to achieve these priorities. In addition, the Commission commits to develop priority initiatives, to be adopted over the next twelve to eighteen months. Each initiative is supported by a comprehensive assessment of its likely impact. More detailed programming takes the form of a list of planned Commission initiatives and a list of adopted Commission initiatives. Both contain legislative proposals to other EU institutions, major non-legislative acts and acts, selected by the Commission, that are of interest to other EU institutions and to the general public.

Each Directorate-General establishes Annual Management Plans (AMPs) on the basis of the preceding framework in order to show how it will contribute towards attainment of the Commission's overall annual work programme.[147] Thus the AMP translates the priority initiatives and the strategic objectives of the Commission into concrete operations and provides an instrument enabling the management to plan and report on all the activities and resources of each directorate-general. Each DG will also present an Annual Activity Report (AAR), which mirrors the AMP in the sense of monitoring how far objectives have been realized.[148]

The cycle ends with Synthesis Reports by the Commission, which assess policy progress, the way in which resources were used, and proposals for remedying deficiencies revealed in the individual reports from the DGs.[149]

The legislative cycle is conducted through Activity Based Management, ABM, which means that planning and management are based on 'politically meaningful activities' rather than purely administrative categories. The 'activities' are the central element of management, the focal point for setting priorities, the defining of objectives, the allocation of resources, and the monitoring of performance. The Commission has developed a set of about 220 politically meaningful activities, which are grouped into policy areas.[150]

[150] http://ec.europa.eu/atwork/activitybased/index_en.htm.

Impact assessment is now a prominent feature of the Commission's legislative planning.[151] It is designed to identify and assess the problem and the objectives pursued. It identifies the main options for achieving the objective and analyses their likely impacts in the economic, environmental, and social fields. Impact assessment is regarded as an aid to political decision, not a substitute for it. It informs decision-makers of the impact of proposals, while leaving it to them to take the decisions. Thus, 'impact assessment identifies the likely positive and negative impacts of proposed policy actions, enabling informed political judgments to be made about the proposal and identify trade-offs in achieving competing objectives'.[152] It is policy driven, focusing on whether the impact of major policy proposals is sustainable and conforms to the principles of Better Regulation. Impact assessment is applied to all major initiatives included in the Commission's Annual Policy Strategy or Work Programme. The impact assessment procedure is integrated into the ABM programming cycle.

There have also been changes designed to improve policy coordination. There is an ABM Steering Group, which is chaired by the Secretary General, and includes Directors-General and cabinets from central services. Inter-institutional cooperation also occurs through the Conference of Presidents.[153] This is chaired by the President of the Parliament in a non-voting capacity, and composed of the leaders of the political groups, each of which has a vote weighted in accordance with the numerical strength of that group in the Parliament. This body meets twice or three times per month, and, *inter alia*, prepares the agenda for the EP. The Commission will normally attend, and it, as well as the Council, will have the opportunity to make suggestions about the agenda.

(ii) *Inter-institutional Agreements*

An important vehicle for more formal inter-institutional cooperation is the Inter-institutional Agreement or Declaration.[154] It functions as 'constitutional glue'[155] for the Community, exemplified by the 1993 Inter-institutional Agreement on Subsidiarity, and the 1993 Inter-institutional Declaration on Democracy, Transparency, and Subsidiarity. Such agreements have also been made in relation to, for example, budgetary discipline, codification, implementation of the budget, and Comitology, and they often form the basis for subsequent hard law. Thus the Inter-institution Declaration on Democracy, Transparency, and Subsidiarity was the catalyst for legislation on transparency in the Commission and Council.[156] Article 295 TFEU now makes express provision for inter-institutional agreements, and provides that they can be binding.

(iii) *The Making of Particular Policies*

The discussion thus far has focused on the differing ways in which the institutions interact in the formulation of general legislative policy. It is now time to consider the ways in which the institutions interact in the making of specific legislation.

The content of legislative proposals will normally have been flagged in the Commission's legislative agenda. The precise content will be the result of interaction between the Commission, interest groups, national experts, and senior civil servants. The Commissioner will assume overall responsibility for a proposal within his or her area. It will have been fashioned by the relevant Directorate-General.

When those directly involved with the proposed measure have given their approval, the draft will be sent to the *cabinet* of the Commissioner. When the Commissioner is satisfied with the draft it will then be submitted to the College of Commissioners. Legislative proposals, once formulated, require the endorsement of the whole Commission. The College of Commissioners will normally meet weekly.[157]

> There is no single way in which decisions are taken. In practice teams of relevant commissioners can be delegated to act on behalf of the College; brain storming can be used; or a written procedure adopted whereby urgent and/or uncontroversial proposals are deemed adopted if no objection is lodged within a specified time to the dossier and draft proposal, normally a week. . . . Only routine matters are delegated to individual commissioners who are then empowered to act within the confines of a very narrow remit on the Commission's behalf: recurrent agricultural regulations are adopted in this way.

The *role of groups of national experts, civil servants, and interest groups in this process of policy-formation* is an interesting one. The framing of the proposal will involve close collaboration with a wide variety of groups. This occurs before the proposal begins its formal legislative journey. Bureaucracies at national and Union level may well become more interlocked.

W Wessels, Administrative Interaction[158]

> By participating in Community decision-making the national civil servants gain 'access' to and 'influence' on EC decision-making and implementation, thus also increasing their weight inside their respective national systems. The same general cost–benefit calculation applies to Community officials who gain access and influence on 'national' domains by opening their policy cycles to the national colleagues—although traditional federalists and supranationalists would argue that this is an unacceptable loss in autonomy and independence of the EC bureaucracy. This cost–benefit analysis by civil servants (*mutatis mutandis* by heads of State, ministers and interest groups, but not by national parliamentarians) creates a major dynamic for European integration leading not to a transfer of loyalty by national officials to a new centre but to cooperation of officials into a new system of shared government. This stage of State evolution is characterized by an increasing degree of cooperation, in vertical terms between different governmental levels, and in horizontal terms, among several groups of actors. The 'multi-level' interactions of civil servants of several national and international administrations thus reinforce trends towards specific forms of the 'sharing' or 'fusion' of powers between 'bureaucrats and politicians' which non-EC-related studies have identified.

National civil servants are not the only group with input into policy-formation. Interest groups have concentrated increasing resources on the EU. Given that the maxim of lobbyists is to 'shoot where the ducks are' we should therefore expect interest groups to organize themselves at a European level.[159] Successful lobbying is dependent on developing good advance intelligence; watching the national agenda; maintaining good links with national administrations; maintaining close contacts with Commission officials; presenting rational arguments; being cooperative; developing a European

[158] W Wallace (ed), *The Dynamics of European Integration* (RISIA/Pinter, 1990) 230.

[159] See, eg, SP Mazey and JJ Richardson, *Lobbying in the EC* (Oxford University Press, 1992); RH Pedler and MPCM Van Schendelen (eds), *Lobbying the European Union: Companies, Trade Associations and Issue Groups* (Dartmouth, 1994).

perspective; not gloating when successful; and not ignoring the implementation process.[160] Many Euro-associations have been formed to foster this process, but the Commission's attitude towards them has been ambivalent.

S Mazey and J Richardson, Pressure Groups and Lobbying in the EC[161]

> There are many examples of the Commission helping to resource these associations and of individual officials 'massaging' the developmental process within the associations (via direct funding and via 'soft' money, for example financing conferences etc.). Thus much of the Commission's activity—particularly at the service level—is very supportive of Euro-associations. Yet, when faced with the day-to-day pressures of initiating and formulating policy proposals which will actually work in the twelve Member States, Commission officials regularly by-pass the Euro-associations. The reasons for this are two-fold. First . . . the associations are of necessity broad in their interests. Commonly, the national industries being represented by the associations have quite different traditions, different structures, and above all, different and *competing* interests. For example, the financial services sector is quite different in Britain and Germany. This means that a European-level regulatory regime which would suit the British would probably not suit the Germans. As with governmental coalitions, the associations have to devise compromise policies—often referred to by the Commission as 'lowest common denominator policies'—which are so general as to be of little practical use to officials. Moreover, the associations often lack the necessary expertise so needed by Commission officials. Thus, it is very common for officials to develop links with individual national associations . . . and to develop links with individual firms as a means of securing reliable technical information quickly.

The Commission has developed principles to govern its dealings with interest groups. There is a register for such groups,[162] which must subscribe to a code of conduct.[163] The Commission may consult such groups on an *ad hoc* basis or through an advisory committee. It uses Green Papers and the like as a mechanism for eliciting their views. The Commission also demands certain standards from such groups. Interest-group pressure at the EU level is to be expected. This does not mean we should be complacent. Profit-making groups outnumber non-profit groups by a significant margin, and their resources are much larger. The costs of organizing at the European level may be especially onerous for the voluntary/non-profit sector. Powerful groups are likely to make their voices heard irrespective of whether formal participatory rights exist, but this is not obviously so for those with less financial muscle.

When a Commission proposal has been formulated *it will make its way to the Council, and normally to the European Parliament*. Coreper is of crucial importance for Council involvement. Before any measure is seen by the Council, it will have been thoroughly examined by working groups that assist Coreper, as well as by Coreper I or II. These working groups are composed of national officials and experts from Member States, plus a member of the Commission. They may be permanent or *ad hoc*. There may be 200–250 such groups at any one time.[164] They examine the Commission proposal and prepare a report. This will indicate the areas on which agreement has been reached ('Roman I points') and all other points ('Roman II points'). The latter will then be discussed within Coreper.

[162] https://webgate.ec.europa.eu/transparency/regrin/welcome.do?locale=en#en.

[163] http://ec.europa.eu/civil_society/interest_groups/code_en.htm.

[164] F Hayes-Renshaw, C Lequesne, and P Mayor Lopez, 'The Permanent Representations of the Member States to the European Communities' (1989) 27 JCMS 119, 132.

Coreper continues to be important when proposed measures have been tabled before the Council, since it sets the Council's agenda. Issues on which there is agreement within Coreper will be placed on the 'A list' and will be adopted without discussion. If agreement within Coreper has not been possible then such issues will be placed on the 'B list', indicating that debate and decision by the Council are required. Members of Coreper will attend Council meetings as advisers to their national ministerial representatives. Coreper will also negotiate with the EP should the Conciliations Committee be convened pursuant to the co-decision procedure.

The modifications in the decision-making process since the SEA increased the importance of the Council Presidency. It is the Presidency that coordinates the meetings of the different sectoral Councils. Who participates depends on the subject matter: on some occasions foreign ministers will attend, on others it will be the minister responsible for a particular sectoral area, such as agriculture. The President mediates conflicts between the Member States, between the Member States and the Commission, and between the Council and the Parliament.

The *role of the Parliament* in the passage of legislation is equally important. The main part of the Parliament's legislative work is undertaken by standing committees. The appropriate committee will make the initial draft report on legislation submitted to the Parliament pursuant to Article 289 TFEU. The responsibility for drawing up the committee report is given to a *rapporteur*, who will present the draft report to the committee. It will normally have four parts: suggested amendments to the Commission proposal; a Draft Legislative Resolution; an Explanatory Statement; and any relevant Annexes. The committee will advise the MEPs how to vote in the plenary session, and the *rapporteur* will usually act as the committee's spokesperson. The preceding discussion revealed the emphasis placed on dialogue and the search for consensus at the various stages of the ordinary legislative procedure.[165]

10 EU DEMOCRACY: ARGUMENT AND EVALUATION

The democratic legitimacy of decision-making within the EU has long been debated.[166] This has been particularly so since the Maastricht Treaty, as reflected in the institutional reports which led to the 1996 IGC[167] and the rich vein of academic literature, much of which is concerned with the EU's 'democratic deficit'.[168] While views differ on this issue, the following account, developed from

[165] 126–128.

[166] The discussion draws in part on P Craig, 'Integration, Democracy and Legitimacy' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 2nd edn, 2011) ch 2.

[167] Craig (n 15); G de Búrca, 'The Quest for Legitimacy in the European Union' (1996) 59 MLR 349.

[168] See, just in terms of books, S Garcia (ed), *European Identity and the Search for Legitimacy* (Pinter, 1993); J Hayward (ed), *The Crisis of Representation in Europe* (Frank Cass, 1995); A Rosas and E Antola (eds), *A Citizens' Europe, In Search of a New Order* (Sage, 1995); R Bellamy, V Bufacchi, and D Castiglione (eds), *Democracy and Constitutional Culture in the Union of Europe* (Lothian Foundation Press, 1995); S Andersen and K Eliassen (eds), *The European Union: How Democratic Is It?* (Sage, 1996); R Bellamy and D Castiglione (eds), *Constitutionalism in Transformation: European and Theoretical Perspectives* (Blackwell, 1996); R Bellamy (ed), *Constitutionalism, Democracy and Sovereignty: American and European Perspectives* (Avebury, 1996); F Snyder (ed), *Constitutional Dimensions of European Economic Integration* (Kluwer, 1996); R Dehousse (ed), *Europe: The Impossible Status Quo* (1997); D Curtin, *Postnational Democracy, The European Union in Search of a Political Philosophy* (Kluwer, 1997); P Craig and C Harlow (eds), *Lawmaking in the European Union* (Kluwer, 1998); J Weiler, *The Constitution of Europe* (Cambridge University Press, 1999); C Hoskyns and M Newman (eds), *Democratizing the European Union* (Manchester University Press, 2000); B Laffan, R O'Donnell, and M Smith, *Europe's Experimental Union: Rethinking Integration* (Routledge, 2000); F Mancini, *Democracy and Constitutionalism in the European Union* (Hart, 2000); K Neunreither and A Wiener (eds), *European Integration after Amsterdam, Institutional Dynamics and Prospects for Democracy* (Oxford University Press, 2000); R Prodi, *Europe As I See It* (Polity, 2000); K Nicolaidis and R Howse (eds), *The Federal Vision, Legitimacy and Levels of Governance in the United States and the European Union* (Oxford University Press, 2001); W van Gerven, *The European Union, A Polity of States and Peoples* (Hart, 2005).

Joseph Weiler's summary of the democratic deficit,[169] is reasonably representative. It is important to understand that the phrase 'democratic deficit' has a number of different features which must be distinguished.

(A) THE NATURE OF THE ARGUMENT

An important critique of EU decision-making is that it is 'unresponsive to democratic pressures'. It is a cardinal feature of democratic regimes that voters can change the government.[170] This is not the case within the EU. Legislative power is divided between the Council, Commission, and Parliament. It is only the Parliament that is directly elected. A change in the Parliament's composition through European elections will not, therefore, necessarily lead to major shifts in EU policy, since it is only one part of the legislature.

A second facet of the democracy deficit argument concerns 'executive dominance'. The transfer of competence to the EU enhances the power of the executive at the expense of national parliaments. This is because of the dominance of the Council and European Council in the EU's decision-making process, and the difficulty experienced by national parliamentary bodies in exercising real control over EU decisions. While the existence of the EP alleviates this problem by providing a directly elected forum at the European level, it does not remove it. This is because of its limited powers, lack of voter interest in EP elections, and the absence of a developed party system within the EU.

A third feature of the democracy deficit argument is the 'by-passing of democracy argument'. This critique was applied most frequently to the complex committee structure, known generally as Comitology. We have seen that many technical, but important, regulations were made by committees established pursuant to delegation of power to the Commission. Technocrats and national interest groups have dominated this decision-making to the exclusion of more regular channels of democratic decision-making, such as the European Parliament and even the Council.

There is, fourthly, what may be termed the 'distance issue'. Many matters have been transferred to Brussels from the nation state, thereby further removing them from the citizen.

A fifth aspect of democracy deficit can be termed the 'transparency and complexity issue'. Traditionally much EU decision-making, particularly in the Council, has taken place behind closed doors. In addition the very complexity of the legislative procedures has meant that it is virtually impossible for any one, other than an expert, to understand them.

There is, sixthly, the less known 'substantive imbalance issue'. Writers from the left argue that the democratic deficit should also encompass the imbalance between labour and capital, which they claim has been exacerbated by the freeing up of the European market.

There is, finally, the 'weakening of judicial control issue'. A number of legal systems possess courts with power over the constitutionality of primary legislation. The transfer of competence to the EU means that such powers are thereby reduced in scope.

(B) EVALUATION: THE EMPIRICAL FRAME OF REFERENCE

We live by and through language. The very language of democratic deficit is powerful in its imagery. It speaks to some base point from which we are deviating, an impression reinforced by the analogy with budget deficit. Democracy cannot however be measured in the same way as a budget. Any

[169] J Weiler, U Haltern, and F Mayer, 'European Democracy and its Critique' in J Hayward (ed), *The Crisis of Representation in Europe* (Frank Cass, 1995) 32–33; J Weiler, 'European Models: Polity, People and System' in Craig and Harlow (n 47) ch 1.

[170] A Follesdal and S Hix, 'Why there is a Democratic Deficit in the EU: A Response to Majone and Moravcsik' (2006) 44 JCMS 533, 534–537.

assessment of the democratic deficit argument must be partly empirical and partly theoretical. The discussion that follows does not mean that democracy within the EU is incapable of improvement. It does mean that we must be fair when assessing EU democracy in comparison to national regimes, and in comparison to what would be the case if the EU did not exist.

The empirical frame of reference for the EU's democratic deficit is by way of comparison with the position as it would be if matters were still dealt with at national level. This requires us to assess the reality of decision-making within national polities, and postulate what the locus of decision-making would be if there were no EU.

(i) *Comparison with National Polities*

The first step of the argument takes us into familiar territory. Executives tend to dominate most modern domestic polities. The degree of dominance varies, but the general proposition none the less holds true. The idea that national parliaments really control the emergence or content of legislative norms rarely comports with reality. The force of the 'executive dominance' critique of EU decision-making appears weaker when viewed in this light.

It is, moreover, by no means self-evident that the EP has less power over the content of legislation than do national parliaments. Most important EU legislation is now subject to the ordinary legislative procedure. Statistics show that the EP has had a pretty good strike rate at getting its amendments accepted.[171] It might be argued that these amendments were minor, or ones that the Council was willing to accept. The former can only be tested by a detailed study of the various legislative acts in question. The latter is simply reductionist: of course the Council has to accept the amendments since otherwise the legislation will not become law, but this does not prove that the EP exercised no power. The matter can, in any event, be put differently. How many changes which were not executive-sponsored did the legislature in, for example, the UK manage to have incorporated in statutes in any one year?[172]

An understanding of the reality of national decision-making is also important when considering the Comitology problem and the 'bypassing of the normal democratic process'. There was a real problem here for the EU. We should, however, be mindful of the fact that the legitimation of secondary norms is an endemic problem for all domestic political systems. The UK, for example, has not satisfactorily resolved the need for the expeditious passage of secondary norms and the need to ensure effective legislative oversight. Indeed, many norms of a legislative nature are not seen by the UK legislature at all. The EU endeavoured to alleviate this problem through reforms to the Comitology Decision, which made the committee procedure more transparent, and brought the EP more fully into the process than hitherto. The Lisbon Treaty has in any event had a marked impact, as seen above, on the types of act that are subject to such committee procedures.

(ii) *Comparison with International Polities*

The second step of the argument takes us into less familiar terrain. The assumption commonly made is that if the EU did not exist then the matters within its competence would be dealt with at national level. Decisions would be made closer to the people, hence alleviating the 'distance problem', and national parliaments would have greater control, hence mitigating the 'executive dominance' problem.

[171] Westlake (n 11) 39; S Boyron, 'The Co-decision Procedure: Rethinking the Constitutional Fundamentals' in Craig and Harlow (n 47) ch 8; Maurer (n 47) 21–29.

[172] It is true that the UK legislature has recently been more active. However the very fact that this has been deemed so worthy of note itself bears testimony to how far commentators have been accustomed to executive dominance of the legislature.

The conclusion does not follow from the premise. The pressures for some form of international coordination would still be present, even if the EU never existed. An enduring insight from integration theory is that cross-border flows of goods create international policy externalities, which in turn create incentives for policy coordination.[173] The key issue then becomes not whether states interact, but how. They can do so by *ad hoc* international agreements, involving two or more parties. Some more permanent form of international cooperation will often be preferred, thereby reducing the bargaining and transaction costs of *ad hoc* coordination. This is especially so when the number of parties becomes larger, and the issues on which they seek to coordinate become broader.

The real contrast must, therefore, be between how issues such as 'distance', 'executive dominance', 'transparency', and the like play out as between these differing forms of international coordination. There is little room for doubt here: if we apply these criteria then the people fare less well when matters are regulated through a series of *ad hoc* international agreements than they do when they are regulated through the EU. This is so for a number of reasons. International agreements normally include no forum such as the EP. Such agreements are made by the executive, they are run by the executive, and terminated by the executive. National parliaments exercise minimal control. They may have to give their approval to the agreement, but any parliamentary supervision thereafter will usually be interstitial and marginal at best.

(c) EVALUATION: THE NORMATIVE FRAME OF REFERENCE

(i) *Three Contrasting Approaches*

We can now consider the theoretical aspect of the democracy deficit argument. What divides commentators is that they accord varying significance to different aspects of democracy when judging the EU. This can be seen by contrasting three approaches in the literature.

Moravcsik's defence of the EU from the allegation that it suffers from a democratic deficit is premised on democracy in terms of *checks and balances*.[174] Viewed from this perspective he maintains that 'constitutional checks and balances, indirect democratic control via national governments, and the increasing powers of the European Parliament are sufficient to ensure that EU policy-making is, in nearly all cases, clean, transparent, effective and politically responsive to the demands of European citizens'.[175] He points to mechanisms for direct and indirect democratic accountability in the EU, via the EP and via the Council and European Council.[176] He moreover rightly notes that insofar as the EU makes decisions in certain areas that are insulated from direct political contestation the degree to which it does so and the areas in which this occurs bear close analogy to those in which analogous methods of decision-making are used in nation states.[177] Thus for Moravcsik, the 'classic justification for democracy is to check and channel the arbitrary and potentially corrupt power of the state',[178] and the centrality of this theme to Moravcsik's argument is reflected in the fact that the starting point to his analysis focuses on constraints, substantive, administrative, and procedural, on the scope of EU power.

[173] A Moravcsik, 'Preferences and Power in the European Community: A Liberal Intergovernmentalist Approach' (1993) 31 JCMS 473, 485; W Wessels, 'The Modern West-European State and the European Union: Democratic Erosion or a New Kind of Polity?' in Andersen and Eliassen (n 168) ch 4; G Majone, 'The European Community Between Social Policy and Social Regulation' (1993) 31 JCMS 153 and 'The Rise of the Regulatory State in Europe' (1994) West European Politics 1; Craig (n 166).

[174] A Moravcsik, 'In Defence of the "Democratic Deficit": Reassessing Legitimacy in the European Union' (2002) 40 JCMS 603.

[175] Ibid 605.

[176] Ibid 609–610.

[177] Ibid 613–614.

[178] Ibid 606.

Moravcsik's thesis has however been challenged by writers such as Weiler,[179] Bellamy,[180] and Follesdal and Hix[181] who are more concerned with *input aspects* of democracy. They contend that the EU suffers from the disjunction between power and electoral accountability, which, as we have seen, constitutes an important element of the democratic deficit critique of the EU. Thus, for example, Follesdal and Hix contend that a democratic polity requires contestation for political leadership and over policy, this being an essential element of even the 'thinnest' theories of democracy, and that it is absent in the EU. They argue that democracy requires procedures that regulate competition for control over political authority, and that the preferences of citizens who participate in elections determine the outcome, such that the government is responsive to the majority or to as many as possible.[182] They contend that these features are lacking in the EU since there is no institutionalized opposition, and scant opportunity to present an alternative set of policy outcomes to those currently espoused by the Commission, Council, and EP. Such electoral contests are moreover integral to the formation of voter preferences on policy issues.[183]

A Follesdal and S Hix, Why there is a Democratic Deficit in the EU: A Response to Majone and Moravcsik

Currently there are several constitution-like and institutional features that insulate the EU from political competition. Most fundamentally, there is no electoral contest for political leadership at the European level or the basic direction of the EU policy agenda. Representatives at the EU level are elected, and so can formally be 'thrown out'. However, the processes of electing national politicians and even the members of the European Parliament are not contests about the content or direction of EU policy. National elections are about domestic political issues, where the policies of different parties on issues on the EU agenda are rarely debated. Similarly, as discussed, European Parliament elections are not in fact about Europe, but are 'second-order national contests'. They are fought by national parties on the performance of national governments, with lower turnout than national elections, and hence won by opposition and protest parties. At no point, then, do voters have the opportunity to choose between rival candidates for executive office at the European level, or to choose between rival policy agendas for EU action, or to throw out elected representatives for their policy positions or actions at the EU level.

While commentators such as Weiler and Follesdal and Hix disagree with certain tenets of Moravcsik's argument, their view has in turn been challenged by Menon and Weatherill.[184] The basis of this disagreement reflects once again differences of view as to the factors that should be prioritized when thinking about democracy in the EU. Menon and Weatherill argue that *output legitimacy* is especially important in this regard. They contend that using state paradigms to measure EU legitimacy is falsely to assume that the EU is seeking to become a state, and that insofar as there may be some virtue in drawing on state practice when thinking about the legitimacy of the EU this must be done while fully cognizant of the failure of the state to live up to its own ideals.[185] They argue that the effectiveness of the EU is dependent on the Commission and ECJ acting as 'vigorous autonomous institutions'.[186]

[179] Weiler (n 169).

[180] R Bellamy, 'Democracy without democracy? Can the EU's Democratic "Outputs" be Separated from the Democratic "Inputs" provided by Competitive Parties and Majority Rule?' (2010) 17 JEPP 2.

[181] Follesdal and Hix (n 170).

[182] Ibid 547.

[183] Ibid 552.

[184] A Menon and S Weatherill, 'Democratic Politics in a Globalising World: Supranationalism and Legitimacy in the European Union', LSE, Law, Society and Economy Working Papers 13/2007.

[185] Ibid 2.

[186] Ibid 2.

Output legitimacy is seen as particularly important.[187] Effectiveness is a 'source of legitimacy',[188] and hence these institutions should not be tied to traditional ways of thinking about democratic accountability within nation states. Menon and Weatherill contend moreover that supranationalism can provide a cure for democratic failings of nation states, through legally enforceable obligations that require the state to respect interests that would normally have little or no voice within national decision-making.[189] They are sceptical about arguments designed to address the EU democracy deficit that focus on input legitimacy, such as election of the Commission President, increase in EP control over the executive, and initiatives designed to enhance the electoral accountability and mandate of the EU institutions in accord with voter preferences.[190]

(ii) *Evaluation: Input Democracy and the EU*

Space precludes detailed consideration of these contending arguments.[191] The following points can nonetheless be made here.

The Lisbon Treaty has alleviated but not cured the concerns about input democracy. Council transparency has been improved. The European Parliament has been empowered through extension of the ordinary legislative procedure to new areas, and it has greater control over the appointment of the Commission President than hitherto. Thus, while the European Council retains ultimate power over choice of Commission President, it is unlikely to attempt to force a candidate on the EP who is of a radically different persuasion from the dominant party or coalition in the EP. Insofar as the EU has been depicted as a polity in which policy is divorced from party politics, a formal linkage between the dominant party/coalition in the EP and the appointment of the Commission President serves to strengthen the connection between policy and party politics. This alleviates the disjunction of power and responsibility that has underpinned earlier critiques.

There are nonetheless obstacles that subsist to a closer link between policy and politics in the EU, even after the Lisbon Treaty reforms. The EU policy agenda is not exclusively in the hands of the EP and/or Commission. The Council and the European Council have input both *de jure* and *de facto*. The Commission President is only one member of the Commission team, and the other Commissioners will not necessarily be of the same political persuasion as the President or the dominant party in the EP. The absence of a developed party system at the EU level is also important in this respect. EU elections have hitherto been fought by national political parties in which national political issues often predominate, with the result that there was little by way of a clear political agenda on EU issues that was proffered for the voters to choose from. This is unlikely to change in the near future. It should moreover be acknowledged that disposition of power in the EU is premised on the twin conceptions of legitimacy now embodied in Article 10 TEU: the people are represented through the European Parliament and the Member States in the Council and the European Council. This very division of power means that it is not possible for the people directly to vote out those in power and substitute a party with different policies, since Member State representatives in the Council and European Council are not chosen in this manner.

It would in theory be possible to have a regime in which the people voted directly for two constituent parts of the legislature, the EP and Council, and for the President of the Commission and the President of the European Council. The political reality is that radical change of this kind was not on the political agenda in the debates on the Constitutional and Lisbon Treaties. However even if such a system were to be introduced it would not ensure that the people could exercise electoral control over

[187] Ibid 6–9.

the direction of EU policy, since the European Council would still be populated by Heads of State, who would continue to have a marked influence over the policy agenda, and in addition members of the Commission, with diverse political views, would still be chosen by their Member States.

(iii) *Evaluation: Output Legitimacy and the EU*

There are then obstacles to the full realization of input conceptions of democracy in the EU. It can also be acknowledged that legitimacy judged in terms of output is a significant consideration. We should nonetheless be cautious about Menon and Weatherill's contention that because the EU is not a state input democracy is therefore unnecessary or inappropriate at EU level, and that such matters should be addressed at national level.

The EU may not be a state, but it nonetheless has political authority over a wide range of areas. The days when its sole focus was economic have long gone. It exercises significant power over political, social, and economic issues, ever more so with the increasing EU activity in relation to the Area of Freedom, Security, and Justice, and it is more difficult to judge the efficacy of such initiatives in output terms, by way of comparison with market-making. The legislative and executive initiatives undertaken by the EU in this and other areas have never been apolitical. This is true even in relation to core market-making activities. The very balance between the political and the social within the EU has been contested. A glance at the Commission's detailed legislative agenda for any one year, or the longer term plans, reveals strikingly the political choices and value judgements that are inherent in EU decision-making. So too do the choices made by other institutional players, such as the European Council. It is for this very reason that commentators remain concerned about input democracy and the connection, or absence thereof, between political power and electoral accountability. This concern is warranted, notwithstanding the fact that there may be some activities undertaken by nation states that are not subject to the full rigours of the democratic process.

11 CONCLUSIONS

i. Institutional balance between the Commission, Council, and European Parliament has always characterized decision-making within the EU.[192] That balance is dynamic, not static, and it has changed over time. The increase in the EP's power has been a principal feature in that institutional dynamic.
ii. The legitimacy of EU decision-making is now founded on the Council, as representing state interests, and the EP as representing the interests of the peoples of Europe: Article 10 TEU. The Commission, which is increasingly accountable to the EP, seeks to ensure that the goals laid down in the Treaties are met.
iii. The 'message' that emerged from the Lisbon Treaty concerning democracy within the EU was mixed. Those who hoped that it would signal a significant shift to a more parliamentary regime were disappointed. The EP's power over primary legislation was increased. However state interests in the Council and European Council were also reinforced through creation of the longer term Presidency of the European Council, and the European Council's retention of ultimate control over the choice of President of the Commission.
iv. The reality was therefore that the Lisbon Treaty embodied a regime in which executive and legislative powers were shared between the European Council, Council, EP, and Commission. The sharing of such power has been a principal theme of the Community, and in this respect the Lisbon Treaty represented continuity with the past, even if the power sharing differed in points of detail.

v. Discussion of EU democracy is important and is to be encouraged. It is however equally important when doing so to be aware of the empirical and theoretical dimension to such discourse.
vi. The empirical dimension requires us to be objective when comparing democracy within the EU with the reality of its operation at national level. We must be equally realistic as to what would happen if the EU did not exist. Not all powers presently exercised by the EU would return to the nation state. Many such issues would be dealt with through bilateral or multilateral international agreements, which are dominated by national executives and do not fare especially well when judged by precepts of democracy.
vii. It is also important to be aware of the theoretical assumptions that underpin any particular version of the democratic critique. The disagreements within the large literature on this topic are often explicable because commentators regard different aspects of democracy as central when evaluating the EU.

NEW FORMS OF GOVERNANCE

1 CENTRAL ISSUES

i. The aim of this chapter is to introduce the debate over new modes and forms of governance in the EU, and to provide a general account of the apparent shift towards greater use of these over time. It will also outline some of the reasons which have been suggested for the rise and spread of new modes of governance, as well as some of the debates to which it has given rise.

ii. The language of 'new' forms of governance in the EU is broadly speaking used to refer to a move away from reliance on hierarchical modes towards more flexible modes as the preferred method of governing. These terms will be explained further in the chapter.

iii. There has been considerable debate over the newness or otherwise of these moves, with a range of other terms such as networked governance, reflexive governance, and experimentalist governance also being used. While acknowledging the contestation over the novelty or otherwise of 'new modes', the chapter suggests that there have been certain changes in preferred governing modes over the last decade or two in the EU, and it outlines the main contours of those changes.

iv. A number of examples of new governance instruments and methods will be given, in particular the 'new approach to harmonization' and the 'open method of coordination'. A number of other EU governance reform initiatives related to the new governance debate will also be discussed, such as the introduction and elaboration of the subsidiarity and proportionality principles, the 'better regulation' initiative, and the Commission White Paper on Governance and its follow-up.

v. While the use of new forms of governance is more prominent and has been the subject of more extensive analysis in certain fields such as environmental policy, employment, and social policy, there is also discussion of these governance trends in other issue areas such as education, corporate governance, and competition enforcement.[1]

2 INTRODUCTION

The previous chapters have introduced the main instruments used by the EU for making law and policy, as well as the main lawmaking processes by which they are adopted. We have seen that there is

[1] See, eg, S Deakin, 'Reflexive Governance and European Company Law' (2009) 15 ELJ 224; P Zumbansen, '"New Governance" in European Corporate Law Regulation as Transnational Legal Pluralism' (2009) 15 ELJ 246; B Lange and N Alexiadou, 'New Forms of European Union Governance in the Education Sector? A Preliminary Analysis of the Open Method of Coordination' (2007) 6 European Educational Research Journal 321; I Maher, 'Regulation and Modes of Governance in EC Competition Law: What's New in Enforcement?' (2008) 31 Fordham ILJ 1713.

a wide range of such instruments and processes, binding and non-binding, formal and informal, with a fairly complex categorization and hierarchy of instruments and norms. This extensive array of tools and the multiplicity of processes, both formal and informal, for adopting them raise the question of what is meant by 'new' forms of governance.

There has been a lively debate in the EU and elsewhere in recent decades about new forms and modes of governance. Official EU actors and the Commission in particular have referred expressly to the use of new or 'alternative' regulatory mechanisms and forms of governance.[2] Several key EU actors, in other words, wanted to suggest something distinctive or novel about certain ways of making policy which they intended to pursue, and a number of extensive research projects on the subject were funded.[3] This discussion on new forms of governance is not however unique to the EU, and not purely an invention of EU officials, but is part of a broader debate about a shift from 'government' to 'governance', both within states and internationally.[4] Further, while any assertion of novelty in political systems is often a rhetorical or strategic device, the fact that there is a desire to be seen to do something differently usually means that there has been recognition of the inadequacy of past practice, and even a change in rhetoric can lead to substantive change.

The academic and policy literature on new governance in the EU has grown not only in size but in complexity.[5] There have been intense debates over the difference between 'instruments', 'processes', and 'modes', debates over the meaning of 'hard' and 'soft' law, and debates over the meaning of 'law' itself.[6] There are definitions of new governance by reference to actors, instruments, governance attributes,[7] architecture,[8] overall 'modes',[9] or by reference to various combinations of these.[10] The result is a dizzying and often confusing picture for those seeking to grasp the essentials of the debate and a broad overview of what is at stake.

Partly for that reason, this chapter, while acknowledging the inevitable simplification involved in identifying one primary point of analysis for the debate, will emphasize one core and unifying theme, which is *the shift away from hierarchical governance*. In other words, when it comes to the concrete question of what is distinctive about certain forms of EU governing as compared with others, we suggest that the core of the debate on new governance concerns a move away from hierarchical forms of governing.[11] The concept of hierarchical governing used here implies a number of different things. It

[11] See, however, B Eberlein, and A Newman, who argue that hierarchy can also be an important resource for 'new' networked governance arrangements: 'Escaping the International Governance Dilemma? Incorporated Transgovernmental Networks in the European Union' (2008) 21 Governance 25.

implies that policies come from 'above' or from the centre (ie, they are top-down). It implies that the policies are relatively complete, in the sense that they do not leave much room for discretion on the part of those to whom the policies apply (ie, they are prescriptive). And it implies that prescriptions are obligatory for those to whom they apply (ie, they are binding), generally allowing for compulsory legal enforcement. Within this broad concept of hierarchical governance, many of the dimensions and features used by other commentators in their analysis or definitions of new governance are implicated. The emphasis on central governmental *actors* is clearly one, the degree of detail and prescriptive nature of *instruments* is another, and the use of binding measures with reliance on *legal enforceability* is another. Another common description of certain forms of hierarchical governance which refers to the overall style of the governing mode, rather than to actors, instruments, or processes, is the term *command-and-control-type regulation*.

In an influential article on the rise of new governance and its relationship with law in the EU, the 'Classic Community Method' (CCM) of lawmaking was identified by the authors as a benchmark against which new forms of governance can be measured.[12] They explain this benchmark CCM as the exercise of legislative power by the EU following the Commission's exercise of its almost exclusive right of initiative, leading to the adoption of legislation by the Council and Parliament, resulting in a binding uniform rule which is subject to the jurisdiction of the Court of Justice. We can see in this definition the three elements of hierarchical governance which we have set out above: top-down governing by the central institutional actors leading to binding, uniform rules. Formally speaking, with the disappearance of the European Community after the enactment of the Lisbon Treaty, the CCM no longer exists, even though the ordinary legislative procedure reflects most of the same procedural elements. But the CCM serves as a notional ideal-type of the kind of classic centralized lawmaking with which new governance modes are compared. New governance modes have also been contrasted not just with the CCM, but also with typical intergovernmental modes.[13] While very different from the CCM and the ordinary EU legislative procedure, intergovernmental modes are certainly hierarchical in the top-down sense, albeit privileging state actors and state sovereignty more than supranational EU actors. And while EU intergovernmental decision-making does not generally lead to detailed prescriptive measures, it does often, as under the CFSP, result in the adoption of binding measures which are obligatory for the Member States.

The broad argument of this chapter that there has been a move away from hierarchical governing in the EU certainly does not mean that there is little reliance today on top-down, binding, or detailed legal measures. The ordinary legislative procedure is alive and well, as are many other forms of hierarchical EU governance, intergovernmental and otherwise. A 'move away' implies less reliance, and implies greater reliance on other kinds of governing mechanisms, but it does not necessarily mean the disappearance of hierarchical modes, or of other modes which share features of hierarchical governance. Secondly, a 'move away' does not imply that there has in the past been an exclusive reliance on hierarchical governing, but rather that this was officially understood in many instances to be the preferred mode or the more effective mode. There has always been, as indicated above, a multiplicity of different instruments and processes of lawmaking and policy-making in the EU, and not all of these alone or in combination could be described as hierarchical. However, the discussion of new forms of governance implies that *some* shift has occurred, that one mode of governing is no longer assumed to be the preferred or the predominant mode, and that other modes and forms have come to the fore and are increasingly being promoted, tested, and used. Finally, it may be the case that new governance forms are more readily proposed and used in certain areas of policy than others, for a variety

[12] Scott and Trubek (n 7).

[13] P Zysk, *New Governance and New Terrorism in the EU: the Beauty and the Beast* (PhD Dissertation, EUI Florence 2006).

of reasons. While there seems to be some empirical evidence for this, with social and environmental policy being two particularly notable fields in this respect, the argument of this chapter is that the tendency to emphasize and promote new forms of governance seems to be a more general one in the EU, and that all policy areas are potential candidates.

We suggest that the shift towards new modes of governance is characterized by *a move away from hierarchical governing towards more flexible forms of governance*. A shift away from hierarchical governance does not mean that the main institutional actors are not centrally involved in policy-making, but rather that they share that space more obviously with other stakeholders, whether states, regional actors, private actors, non-governmental organizations, or others. In other words, policies adopted in accordance with new governance modes are not generally created and imposed top-down. Rather, those to whom they are to be applied are involved in their shaping and application. Secondly, a move towards more flexible forms of governance does not necessarily mean that there is no legal commitment to the policies which are agreed within these new forms. Some new forms of governance may be wholly voluntaristic, but many others are not. The difference in emphasis as between traditional hierarchical forms of governance and alternative governance modes, even when the latter result in binding legal acts, is that there is likely to be greater room for input, adaptation, and revision on the part of those administering the policies or those to whom they are applicable. It also implies that policy-making is less likely to be rigidly prescriptive or difficult to revise.

In giving an overview of the emergence of new forms of governance in the EU, there is a multitude of examples which could be cited and developments which could be examined. However, given the constraints of space, this Chapter will focus on three issues in particular. The first and most specific is the 'new approach to harmonization' which came to prominence in the 1980s as part of the EU's single market programme, and which exemplifies aspects of the move away from hierarchy and towards greater flexibility.[14] The second, and undoubtedly the most important in terms of catalysing the debate on new governance in the EU, is the set of developments that were marked by the EU's adoption of the 'Lisbon Agenda' in 2000.[15] Along with the launch of this broad policy strategy for the EU, a form of policy coordination which became known as the Open Method of Coordination (OMC) was explicitly introduced, and this has given rise to a vast literature, much of which is concerned with its analysis as a new mode of governance.[16] The third, unlike the first two, does not analyse a development within particular policy fields, but rather examines the more general official emphasis on the need for change in the character of EU regulation and policy-making over the last decade or so. This emphasis can be discerned in a number of related governance initiatives: (i) the formal introduction of the principles of subsidiarity and proportionality into policy-making by the Maastricht and Amsterdam Treaties and subsequent policy developments;[17] (ii) the Commission's 'better regulation' initiative, which reveals the influence of related public management theories which resonate with many aspects of new governance, and also the Commission's 2001 White Paper on Governance. These linked initiatives reveal an ongoing and self-conscious attempt by EU institutional actors to develop what they consider to be improved and more effective methods of regulating and governing, against the backdrop of an assumption that some of the preferred policy methods and legal approaches in the past had not delivered their intended results.[18]

3 THE NEW APPROACH TO (TECHNICAL) HARMONIZATION

We will see in subsequent chapters that the early approach to common-market harmonization involved attempting to prescribe the desired result through detailed regulation, and that the shortcomings of this approach were gradually recognized.[19] These included the length of time it took to secure agreement on detail, the cumbersome nature of the legislative process, and the need for ongoing updating of the detail. During the 1980s, the Commission decided, as part of the broader relaunch of the internal market, to adopt a 'new approach' to harmonization and to the use of standards in removing 'technical barriers to trade'.[20] The main elements of the new approach were set out by the Council in an annex to its Resolution adopted in 1985:[21]

> The following are the four fundamental principles on which the new approach is based: –
>
> Legislative harmonization is limited to the adoption, by means of Directives based on Article 100 of the EEC Treaty, of the essential safety requirements (or other requirements in the general interest) with which products put on the market must conform, and which should therefore enjoy free movement throughout the Community,
>
> — the task of drawing up the technical specifications needed for the production and placing on the market of products conforming to the essential requirements established by the Directives, while taking into account the current stage of technology, is entrusted to organizations competent in the standardization area
>
> — these technical specifications are not mandatory and maintain their status of voluntary standards
>
> — but at the same time national authorities are obliged to recognize that products manufactured in conformity with harmonized standards (or, provisionally, with national standards) are presumed to conform to the 'essential requirements' established by the Directive. (This signifies that the producer has the choice of not manufacturing in conformity with the standards but that in this event he has an obligation to prove that his products conform to the essential requirements of the Directive)
>
> In order that this system may operate it is necessary: – on the one hand that the standards offer a guarantee of quality with regard to the 'essential requirements' established by the Directives, and on the other hand that the public authorities keep intact their responsibility for the protection of safety (or other requirements envisaged) on their territory.

Several elements can be noted in this new approach to harmonization. The first is that, although directives will continue to be used to set the basic requirements, they are to be limited to the setting of 'essential requirements' which are necessary to ensure public safety and other general interests. In other words, the degree of detail and prescriptiveness in the legislation is to be reduced.

Secondly, the task of setting technical standards for the products which have to meet these essential requirements is to be carried out not by the EU legislative institutions themselves, but by European standardization bodies, which are known as CEN and CENELEC, which act with the agreement of the Commission. Thus we see the devolution of aspects of policy-making to bodies other than the formal EU lawmaking institutions, in this case to private standard-setting organizations composed of representatives of national standard-setting organizations, which are in turn generally financed by industry and by governments.

[19] See Ch 17 on the Single Market, Ch 19 on quantitative restrictions on the free movement of goods, and Ch 22 on freedom of establishment and services.

[20] Technical Harmonisation and Standardisation: A New Approach, COM(1985)19.

[21] [1985] OJ C136/1.

Thirdly, the standards set by these bodies are not compulsory, but remain voluntary. However, manufacturers are given an incentive to abide by the standards set because if their products are certified as being in conformity with them, they benefit from the presumption that they meet the essential requirements of the directive and are entitled to enjoy freedom of movement across the EU market. Thus the new approach to harmonization reveals a certain shift away from the three dimensions of hierarchical governance set out earlier: the monopoly of central institutional actors, the degree of prescriptive detail, and the formally compulsory nature of the norms.

The new approach to harmonization has undergone re-examination and revision on several occasions since its adoption.[22] And although the Commission and others have pointed to various problems in the process of standard-setting and the standardization bodies,[23] as well as in relation to the national bodies carrying out conformity assessments, it has continued with this approach even while reforming and 'modernizing' it. Thus, while the deficiencies of the new approach have certainly been pointed out,[24] the new approach established a form of governance in the area of technical harmonization which was described by the Commission as 'highly efficient and successful'[25] and which has spread since its introduction.

It provides a good example of an early instance of new governance, a form of regulation which moved deliberately away from traditional hierarchical lawmaking to a more experimental and flexible one. The new approach has been regularly updated and modernized, and recently the Commission and the Council have undertaken a review of the processes of standardization underpinning the new approach, both within the EU and in the context of European engagement in global standardization bodies and processes.[26]

4 THE LISBON AGENDA AND THE OPEN METHOD OF COORDINATION

In 2000, the European Council at its Lisbon summit introduced a new ten-year set of policy priorities and goals for the EU which dominated the policy agenda for many years afterwards,[27] and has recently been followed by the Europe 2020 strategy.[28] The overarching aim of the Lisbon Agenda, the 'new strategic goal', was to improve the EU's competitiveness and economic performance *vis-à-vis* the United States, and the means by which it was proposed to do so included a range of ambitious policy goals. The goals were along two axes: economic and social. The economic goals included shifting to a 'dynamic, knowledge-based economy' and information society, establishing a European area for research and innovation, developing a business-friendly environment,

[28] See the European Council Conclusions, June 2010. For details see http://ec.europa.eu/europe2020/index_en.htm.

undertaking further internal-market liberalization reforms, integrating financial markets, and coordinating macro-economic policies. The social goals, under the broad umbrella of 'modernizing the European Social model and building an active welfare state', included training and education for the knowledge society, developing an active employment policy, modernizing social protection, pension reform, and promoting social inclusion through anti-poverty measures.

Alongside these two sets of substantive goals a new policy instrument was introduced, under the name of the open method of coordination (OMC). In fact, the OMC, which was first named in the Lisbon conclusions, drew to a considerable extent on two existing policy-coordination processes introduced into the EC Treaty at Maastricht and Amsterdam, in the field of economic and employment policy respectively. The European Council Conclusions at Lisbon described the method as follows:[29]

Putting Decisions into Practice: A More Coherent and Systematic Approach

Implementing a new open method of coordination

37. Implementation of the strategic goal will be facilitated by applying a new open method of coordination as the means of spreading best practice and achieving greater convergence towards the main EU goals. This method, which is designed to help Member States to progressively develop their own policies, involves:

- fixing guidelines for the Union combined with specific timetables for achieving the goals which they set in the short, medium and long terms;
- establishing, where appropriate, quantitative and qualitative indicators and benchmarks against the best in the world and tailored to the needs of different Member States and sectors as a means of comparing best practice;
- translating these European guidelines into national and regional policies by setting specific targets and adopting measures, taking into account national and regional differences;
- periodic monitoring, evaluation and peer review organised as mutual learning processes.

38. A fully decentralised approach will be applied in line with the principle of subsidiarity in which the Union, the Member States, the regional and local levels, as well as the social partners and civil society, will be actively involved, using variable forms of partnership. A method of benchmarking best practices on managing change will be devised by the European Commission networking with different providers and users, namely the social partners, companies and NGOs.

The four elements set out above comprise the key features of the OMC, although the exact nature of each element (guidelines, measured against benchmarks and indicators, translated into local policies, accompanied by learning-oriented monitoring and evaluation) has varied depending on the policy area in question, and comprises a range of sub-elements. Thus the instrument or tool in itself is quite a general and flexible one which can be adapted to fit different policy requirements.

The origins and broader significance of this policy instrument are discussed below, in an extract from a paper by the woman who is generally credited with being the architect of the OMC, and who was adviser to the Portuguese Presidency of the EU in the lead-up to the Lisbon Council.

[29] Lisbon European Council, Presidency Conclusions, 24 Mar 2000.

João Rodrigues, The Open Method of Coordination as a New Governance Tool[30]

The political construction of Europe is a unique experience. Its success has been dependent on the ability to combine coherence with respect for diversity and efficiency with democratic legitimacy. This entails using different political methods depending on policies and the various institutional processes. For good reasons, various methods have been worked out which are placed somewhere between pure integration and straightforward co-operation.

. . .

Policies aimed at building the single market, such as monetary policy or competition policy are, logically, based on a stricter method of coordination in relation to the principles to be observed. However, there are other policies which concentrate more on creating new skills and capacities for responding to structural changes. They involve learning more quickly and discovering appropriate solutions. Such policies have resulted in the formulation of strategic guidelines at European level for coping with structural change and which are more open to national diversity.

As a matter of fact the main source of inspiration of the open method of coordination wasthat of the Luxembourg process regarding European employment strategy. This method was created to overcome a strong political difficulty identified in the preparation of the special European Council of Luxembourg on employment in 1997, because it was impossible to adopt a common target for unemployment reduction, as a counterpart of the common targets for inflation, deficit and debt reduction. But, under the political pressure of this Summit, it became possible to adopt common qualitative guidelines instead. After that, a process was organized whereby Member States emulate each other in applying them, stimulating the exchange of best practices, and defining specific targets while taking account of national characteristics. The European Commission presents the proposal of European guidelines, organises the follow-up and can make recommendations to Member States. Despite some difficulties, the results obtained have been stimulating and encouraging as it is proved by the current National action plans for employment adopted by all Member States. Three years later, the definition of the open method of coordination was expressly undertaken during the preparation of the Lisbon European Council in order to develop the European dimension in new policy fields, namely information society, research, enterprise policy, education and fighting social exclusion . . .

A. The purpose of the open method of coordination is not to define a general ranking of Member States in each policy but rather to organise a learning process at European level in order to stimulate exchange and the emulation of best practices, and in order to help Member States improve their own national policies.

B. The open method of coordination uses benchmarking as a technique but it is more than benchmarking. It creates a European dimension by defining European guidelines and it encourages management by objectives by adapting these European guidelines to national diversity.

C. The open method of coordination is a concrete way of developing modern governance using the principle of subsidiarity.

D. The open method of coordination can foster convergence on common interest and on some agreed common priorities while respecting national and regional diversities. It is an inclusive method for deepening European construction.

E. The open method of coordination is to be combined with the other available methods depending on the problem to be addressed. These methods can range from integration and harmonisation, to co-operation. The open method of coordination itself takes an intermediate position in this range of different methods. It is an instrument to be added to a more general set of instruments.

. . .

The open method of coordination can also become an important tool to improve transparency and democratic participation.

[30] In M Telò (ed), L'evoluzione della governance europea', Special Issue of 'Europa/Europe', Rome, No 2–3, 2001, 96.

Following the Lisbon summit, as is indicated by João Rodrigues, the OMC was extended to a broad range of policy areas beyond those initially proposed. The point has been made that there is no one single OMC and that it represents a 'cookbook' of recipes, with variants on a theme, rather than a single recipe.[31] Indeed, since the formal introduction by Lisbon of the OMC, many OMC-like processes, or elements of the OMC process, have been applied to a wide range of EU policies and issue areas. Apart from the two pre-existing areas of economic policy coordination and the European employment strategy, OMCs were introduced also in the fields of social exclusion, pensions, and health care, and similar mechanisms were introduced in the fields of research, education, enterprise, and the information society. Some combination of broad common guidelines with local or national elaboration, reporting obligations, peer review, feedback, and development of best practices can be found in many areas of EU policy. The three elements identified in our introductory discussion of the EU's move away from hierarchical governance towards new forms of governance can be seen in the architecture of the OMC as it was introduced by the Lisbon summit.

The first is the shift away from central, top-down governing. As envisaged at Lisbon, the OMC was supposed to involve a fully decentralized approach in line with the principle of subsidiarity in which the Union, the Member States, the regional and local levels, as well as the social partners and civil society, will be actively involved, using variable forms of partnership. While the extent to which OMC processes have been participatory and decentralized has been seriously questioned, there are clearly areas in which participation has been more extensive than others.[32]

The second element we can see is the move away from the adoption of complete prescriptive policies. In this sense, the OMC architecture is premised on the setting of general guidelines or goals, and that these are to be translated into national plans by state and regional actors. Once again, it is evident from a critical perspective that the greater the number and the more detailed the nature of the objectives, targets, and indicators set, the less flexible and the less of a departure from traditional hierarchical governance the particular OMC instrument will be. However, at least as far as its design is concerned, the OMC is clearly intended to promote flexibility and openness, and to facilitate interaction between levels of governance in framing and developing policies.

The third element is the absence of, or a significantly reduced role for, binding instruments and compulsory legal enforcement. While within some of the Treaty-based coordination processes, and particularly in the case of economic policy coordination, binding rules and legal enforcement do play a role,[33] nonetheless in most of the OMCs and OMC-like processes legally enforceable or binding norms are scarcely present, or they have a much less prominent role.

Like the new approach to harmonization discussed above, the vast literature generated by the OMC contains much that is critical. Criticism has focused on the empirical question of whether the OMC has 'delivered', and on whether it can be said to have policy steering effects.[34] Other criticisms have

For more measured accounts of the likely influence of various OMCs see M Heidenreich, and G Bischoff, 'The Open Method of Co-ordination: A Way to the Europeanization of Social and Employment Policies?' (2008) 46 JCMS 497; P Copeland and B Ter Haar, 'The (in)effectiveness of the European Employment Strategy" (2010) available at http://euce.org/eusa/2011/papers/7b_copeland.pdf.

focused on normative questions such as whether it lives up to its original promise of inclusiveness and participation,[35] whether social priorities are subordinated to economic and competitiveness concerns,[36] whether there has been a turn from politics to managerialism,[37] and whether the OMC has functioned primarily as a bureaucratic means of adjusting to the new reality of EMU.[38] Others have launched a more full-fronted challenge to the method as a whole, questioning its empirical effectiveness and cautioning about its impact on the EU institutional balance, and on democracy, rights and the rule of law in general.[39]

We shall return to some of these criticisms at the end of the chapter. For now, the significance of the OMC is in the fact that it was a policy instrument specifically designed and introduced as an alternative to hierarchical, prescriptively detailed, and binding lawmaking. It was intended as a more flexible instrument which would simultaneously facilitate a degree of policy coordination and yet also accommodate diversity between the states. Despite its shortcomings and failures in delivering on the strategic goals of the Lisbon summit, OMC-like processes, or processes with some of the features of OMC, continue to be adopted in a range of very different policy fields, and not only in the original fields identified for this purpose at Lisbon. OMC-type processes seem to be proposed for a range of reasons: sometimes to overcome a political blockage where agreement on some more conventional measure cannot be found; sometimes where formal, legal competence is lacking; and sometimes because it is considered to be the most suitable instrument for achieving the policy goals in question.

5 GENERAL EU GOVERNANCE REFORM INITIATIVES

The sections above have given two specific examples of what are sometimes called new forms of governance in the EU. The first was a relatively early example of an 'alternative' governance mechanism, viz the new approach to technical harmonization adopted as part of the single market programme in the 1980s. The second was the introduction of a new policy tool at the time of the launch of the EU's Lisbon Agenda, namely the Open Method of Coordination.

This section, rather than giving another example of a specific instrument or process, outlines a number of more general EU developments and reform initiatives over the last decade or so which reflect elements of the shift in the preferred mode of governance from hierarchical to more flexible modes. The first of these is the introduction and development of the principles of subsidiarity and proportionality into EU law and policy.

(A) SUBSIDIARITY AND PROPORTIONALITY

We have seen in Chapter 3 that the subsidiarity principle was formally introduced by the Maastricht Treaty, and that it was inserted into Article 5 TEU (ex Article 5 EC), together with the principle of conferral and the proportionality principle, for a variety of reasons. Amongst these reasons appears to have been a general concern that the EU should not regulate 'unnecessarily': either that it should not take action at all where it is not warranted, and that even where action of some kind may be warranted, care should be taken that it is not unnecessarily intrusive. The guidelines developed in relation to the subsidiarity and proportionality principles, which were initially contained in the European Council Conclusions at Edinburgh in 1992[40] and which led to the subsequent adoption of an inter-institutional agreement on the application of subsidiarity and proportionality, were eventually codified as primary Treaty law in a Protocol added by the Amsterdam Treaty to the EC Treaty.[41] Like the Edinburgh guidelines on which it was based, the Amsterdam Protocol does not focus on the narrow legal definition of subsidiarity, but offers guidelines as to what kind of action should be taken. Further, although the principles of subsidiarity and proportionality are conceptually distinct, the Edinburgh and Amsterdam Protocol guidelines blur this distinction in a useful way:

> 6. The form of [EU] action shall be as simple as possible, consistent with satisfactory achievement of the objective of the measure and the need for effective enforcement. The [EU] shall legislate only to the extent necessary. Other things being equal, directives should be preferred to regulations and framework directives to detailed measures. Directives as provided for in Article [*288 TFEU*], while binding upon each Member State to which they are addressed as to the result to be achieved, shall leave to the national authorities the choice of form and methods.
>
> 7. Regarding the nature and the extent of [EU] action, [EU] measures should leave as much scope for national decision as possible, consistent with securing the aim of the measure and observing the requirements of the Treaty. While respecting [EU] law, care should be taken to respect well established national arrangements and the organisation and working of Member States' legal systems. Where appropriate and subject to the need for proper enforcement, [EU] measures should provide Member States with alternative ways to achieve the objectives of the measures.
>
> . . .
>
> 9. Without prejudice to its right of initiative, the [EU] should:
>
> — except in cases of particular urgency or confidentiality, consult widely before proposing legislation and, wherever appropriate, publish consultation documents;
>
> — justify the relevance of its proposals with regard to the principle of subsidiarity; whenever necessary, the explanatory memorandum accompanying a proposal will give details in this respect. The financing of [EU] action in whole or in part from the [EU] budget shall require an explanation;

Although the Amsterdam Treaty Protocol has now been replaced by a shorter Lisbon Treaty Protocol on subsidiarity and proportionality,[42] which devotes more space to the new political control mechanism and omits the guidelines quoted above,[43] the Commission declared in its most recent annual subsidiarity report that it will continue to use these guidelines and recommends to the other actors to do so.[44]

[43] Ch 3, Section 11(b)(iii).

[44] COM(2010)547.

Several features of the guidelines are noteworthy for present purposes. First, the general tenor of all of the provisions suggests a move away from hierarchical governance, as we have defined it earlier in the chapter. The very essence of the subsidiarity and proportionality principles is that of restraint as regards the need for regulation and restraint in both the form and the content of regulation. Paragraphs 6–9 above in particular introduce a range of guidelines as to the form and nature of action. The form of action should be as 'simple' as possible; where legislation is chosen directives are to be preferred to regulations, and framework directives are to be preferred to detailed measures. In other words, the degree of prescriptiveness of legislation should be reduced. While directives are binding as to their aim, they leave greater room for discretion in their implementation than other measures such as regulations. This point is emphasized further in the recommendation that directives should ideally be 'framework' in nature rather than being detailed measures. There is also an emphasis on leaving room for 'lower' levels of governing to have as much scope for action as possible, and in the more recent Lisbon Treaty protocol the regions are for the first time mentioned.[45]

These features are broadly consistent with a shift away from hierarchical governance, and away from the dominance of centralized, top-down EU action. Further, the provision for extensive Commission consultation before proposing legislation demonstrates a concern for the involvement of other actors in lawmaking, even if the formal initiative still rests with the Commission. Finally, even though the two measures listed, directives and regulations, are legally binding, these are suggested as options only where the EU has decided to 'legislate', and paragraph 7 appears to envisage other possibilities, by referring in general terms to EU 'measures' which leave as much scope for national decision as possible. Further, while the Lisbon Treaty Protocol contemplates judicial enforcement at the initiative of states, parliaments, and to some extent regions, arguably the most important enforcement mechanisms it introduces are political and administrative rather than judicial.[46]

Thus the guidelines and the successive Protocols on subsidiarity and proportionality based on these guidelines reflect the promotion of a move away from hierarchical governance. There is an emphasis away from centrally-dominated, detailed prescriptive legislation, and reference is made instead to the need for broad consultation, to the desirability of leaving greater space for national action, and to the desirability of facilitating alternative ways of achieving broadly agreed aims.

As with the other initiatives discussed above, it is difficult to appraise the relative success or failure of the efforts to promote a culture of subsidiarity within EU policy-making.[47] The requirement to justify the relevance of proposals with regard to the principle of subsidiarity has led to the insertion of a formalistic 'subsidiarity recital' in most legislation, and more generally there has been much scepticism about the operation of subsidiarity as a principle.[48] Yet it is undoubtedly true that an increasing number of framework directives, as well as many other less prescriptive forms of EU action, have been adopted in recent years in important policy fields, such as water quality, air quality, waste management, eco-design requirements, discrimination in employment, health and safety of workers, and electronic communications. It may be that the choice of instrument is increasingly being made in consciousness of, even if not always in deference to, the kind of guidance given in the Edinburgh Guidelines and Amsterdam Protocol.

[45] See Arts 2 and 5 of the Lisbon Treaty Protocol on the application of the principles of subsidiarity and proportionality.

[46] Ch 3, Section 11(b).

[47] For the most recent three annual Commission reports on subsidiarity and proportionality adopted as part of the better lawmaking initiative see COM(2010)547, COM(2009)504, and COM(2008)586.

[48] G Davies, 'Subsidiarity: The Wrong Idea, in the Wrong Place, at the Wrong Time' (2006) 43 CMLRev 63, argues that subsidiarity serves primarily as a masking principle, presenting a centralizing polity in a decentralizing light; A Estella, *The Principle of Subsidiarity and its Critique* (Oxford University Press, 2004). See also the discussion in Ch 3, Section 11.

(B) BETTER REGULATION AND THE COMMISSION'S WHITE PAPER ON GOVERNANCE

The EU's 'better regulation' initiative has its origins in the same guidelines on subsidiarity and proportionality adopted at Edinburgh in 1992, but this initiative addresses other and more specific issues such as overall simplification of the legislative environment,[49] conducting regulatory impact assessments in particular on business,[50] and the use of alternatives to regulation. This last aspect is of particular interest in the context of assessing the move to new forms of governance.[51]

According to the Commission, the better regulation initiative is based on three key lines: (i) promoting the design and application of better regulation tools at the EU level, (ii) working more closely with Member States to ensure better regulation principles are consistently applied throughout the EU, and (iii) reinforcing constructive dialogue between stakeholders and all regulators at EU and national levels.

In 2003, the European Parliament, Council, and Commission published an Inter-institutional Agreement on better lawmaking, in which they focused on a number of different issues. Amongst them was the need for greater transparency of the formal lawmaking process, as well as the need for respect for the subsidiarity and proportionality principles and for democracy. One section of the Agreement focuses specifically on 'alternative methods of regulation', and in particular the practices of 'co-regulation' and 'self-regulation':

European Parliament, Council and Commission Interinstitutional Agreement on Better Law-making (2003)[52]

Use of alternative methods of regulation

16. The three Institutions recall the Community's obligation to legislate only where it is necessary, in accordance with the Protocol on the application of the principles of subsidiarity and proportionality. They recognise the need to use, in suitable cases or where the Treaty does not specifically require the use of a legal instrument, alternative regulation mechanisms.

17. The Commission will ensure that any use of co-regulation or self-regulation is always consistent with Community law and that it meets the criteria of transparency (in particular the publicising of agreements) and representativeness of the parties involved. It must also represent added value for the general interest. . . . .

— CO-REGULATION

18. Co-regulation means the mechanism whereby a Community legislative act entrusts the attainment of the objectives defined by the legislative authority to parties which are recognised in the field (such as economic operators, the social partners, non-governmental organisations, or associations). This mechanism may be used on the basis of criteria defined in the legislative act so as to enable the

[52] [2003] OJ C321/01.

legislation to be adapted to the problems and sectors concerned, to reduce the legislative burden by concentrating on essential aspects and to draw on the experience of the parties concerned.

...

20. In the context defined by the basic legislative act, the parties affected by that act may conclude voluntary agreements for the purpose of determining practical arrangements. The draft agreements will be forwarded by the Commission to the legislative authority. In accordance with its responsibilities, the Commission will verify whether or not those draft agreements comply with Community law (and, in particular, with the basic legislative act).

At the request of *inter alia* the European Parliament or of the Council, on a case-by-case basis and depending on the subject, the basic legislative act may include a provision for a two-month period of grace following notification of a draft agreement to the European Parliament and the Council. During that period, each Institution may either suggest amendments, if it is considered that the draft agreement does not meet the objectives laid down by the legislative authority, or object to the entry into force of that agreement and, possibly, ask the Commission to submit a proposal for a legislative act.

21. A legislative act which serves as the basis for a co-regulation mechanism will indicate the possible extent of co-regulation in the area concerned. The competent legislative authority will define in the act the relevant measures to be taken in order to follow up its application, in the event of non-compliance by one or more parties or if the agreement fails. These measures may provide, for example, for the regular supply of information by the Commission to the legislative authority on follow-up to application or for a revision clause under which the Commission will report at the end of a specific period and, where necessary, propose an amendment to the legislative act or any other appropriate legislative measure.

— SELF-REGULATION

22. Self-regulation is defined as the possibility for economic operators, the social partners, non-governmental organisations or associations to adopt amongst themselves and for themselves common guidelines at European level (particularly codes of practice or sectoral agreements). As a general rule, this type of voluntary initiative does not imply that the Institutions have adopted any particular stance, in particular where such initiatives are undertaken in areas which are not covered by the Treaties or in which the Union has not hitherto legislated. As one of its responsibilities, the Commission will scrutinise self-regulation practices in order to verify that they comply with the provisions of the EC Treaty.

23. The Commission will notify the European Parliament and the Council of the self-regulation practices which it regards, on the one hand, as contributing to the attainment of the EC Treaty objectives and as being compatible with its provisions and, on the other, as being satisfactory in terms of the representativeness of the parties concerned, sectoral and geographical cover and the added value of the commitments given. It will, nonetheless, consider the possibility of putting forward a proposal for a legislative act, in particular at the request of the competent legislative authority or in the event of a failure to observe the above practices.

A number of key features are noteworthy for the purposes of this chapter in this description of co-regulation and self-regulation.[53] As far as co-regulation is concerned, while a legislative framework is initially adopted by the EU, the 'attainment of the objectives' is entrusted to the relevant stakeholders in the field.[54] Those actors then draw up voluntary agreements which are notified to the Commission. Here we see a departure from the three elements of hierarchical governance

[53] The Commission maintains a database of EU self-regulation and co-regulation initiatives: see www.eesc.europa.eu/?i=portal.en.self-and-co-regulation. For an analysis of EU self-regulation and co-regulation see www.eu-newgov.org/database/DELIV/D04D69_Limits_of_self-regulation.pdf.

[54] For criticism of the EU's conception of co-regulation as being excessively narrow and 'top-down' see P Verbruggen, 'Does Co-Regulation Strengthen EU Legitimacy?' (2009) 15 ELJ 425.

identified earlier: lawmaking is not to be a top-down process involving only the central government actors; details are not prescribed in the framework legislative act but are left to the stakeholders to flesh out; and the agreement adopted by the stakeholders is voluntary. As far as enforcement is concerned, it seems that the framework legislation will make provision for 'follow-up' in the event of non-compliance or failure of the agreement, and that such follow-up can ultimately involve a formal enforcement option if the Commission reports to this effect and proposes an amendment to the legislative act or another legislative measure. Further, the formal legislative process remains a default policy-making option, where this is provided for in the framework legislation and where the voluntary agreement fails to meet its objectives.

Thus co-regulation is here envisaged as a kind of alternative regulation in the shadow of traditional lawmaking. One current example of a kind of co-regulation can be seen in the context of the implementation of the Services Directive 2006/123.[55] Article 37(1) provides for 'the drawing up at Community level, particularly by professional bodies, organisations and associations, of codes of conduct aimed at facilitating the provision of services or the establishment of a provider in another Member State'.[56]

Self-regulation, a more radically decentralized option, is defined as the adoption by the relevant economic or other actors of common guidelines at European level.[57] It clearly involves a move away from centralized top-down regulation and from the adoption of prescriptive, binding norms. It may be asked whether it involves any form of EU governance at all, 'new' or otherwise. The answer to this would seem to be that in areas in which the EU has competence to act but chooses to promote or permit self-regulation instead, the Commission retains a role in scrutinizing self-regulatory practices to check whether they are compatible with EU law requirements and will report to the other EU lawmaking institutions on the representativeness of the parties involved and the 'value' and coverage of the commitments made. Further, as in the case of co-regulation, formal legislation remains a default option in the event of failure to follow the practices agreed.

While extensive use has not been made of co-regulation or self-regulation, the Commission has proposed or facilitated these in a number of areas,[58] such as in the field of internet safety[59] and mobile phone safety[60] in relation to children, and in other audio-visual sectors. A self-regulation agreement was also adopted by the European Advertising Standards Alliance, and approved by the Commission.[61] The main critique in relation to this particular form of EU governance concerns its effectiveness, but there is on the other hand no evidence that more hierarchical forms of regulation are effective or feasible for the kinds of areas in which co-regulation or self-regulation is being proposed.

The better regulation initiative formed a part of the Commission's broader governance reform agenda in the late 1990s. In 2001, following several years of consultation and discussion on the need for reform of EU governance,[62] the Commission adopted its White Paper on European Governance, which drew on a large array of working papers and background documents.[63] According to the

Commission, the Paper was intended to make a set of recommendations on how to enhance democracy in Europe and increase the legitimacy of the institutions. Although it is a rather broad-ranging and in some respects unfocused document, many of the issues with which it deals are related to the kind of governance reforms being discussed in this chapter.[64]

European Governance: A White Paper[65]

...

There needs to be a stronger interaction with regional and local governments and civil society. Member States bear the principal responsibility for achieving this. But the Commission for its part will:

Establish a more systematic dialogue with representatives of regional and local governments through national and European associations at an early stage in shaping policy.

Bring greater flexibility into how Community legislation can be implemented in a way which takes account of regional and local conditions.

...

The Commission will:

Promote greater use of different policy tools (regulations, 'framework directives', co-regulatory mechanisms).

Simplify further existing EU law and encourage Member States to simplify the national rules which give effect to EU provisions.

...

A complementary response at EU level is needed in three areas to build a better partnership across the various levels:

Involvement in policy shaping. At EU level, the Commission should ensure that regional and local knowledge and conditions are taken into account when developing policy proposals. For this purpose, it should organise a systematic dialogue with European and national associations of regional and local government, while respecting national constitutional and administrative arrangements...

...

Greater flexibility. Local conditions can make it difficult to establish one set of rules that covers the whole of the Union, without tying up the legislation in excessive complexity. There should be more flexibility in the means provided for implementing legislation and programmes with a strong territorial impact, provided the level playing field at the heart of the internal market can be maintained.

The Commission is also in favour of testing whether, while respecting the existing Treaty provisions, the implementation of certain EU policies could be better achieved by target-based, tripartite contracts. Such contracts should be between Member States, regions and localities designated by them for that purpose, and the Commission.... The area of environmental policy might be a candidate for this pilot approach. Furthermore, the Commission has already committed itself to a more decentralised approach in future regional policy.[66]

...

Better policies, regulation and delivery

The European Union's policies and legislation are getting increasingly complex. The reluctance of Council and European Parliament to leave more room for policy execution to the Commission means that legislation often includes an unnecessary level of detail...

[64] For a more recent White Paper on Multilevel Governance adopted by the Committee of the Regions see [2009] OJ C211/01.

[65] COM(2001)428.

[66] Second Cohesion Report, COM(2001)21.

> The level of detail in EU legislation also means that adapting the rules to technical or market changes can be complex and time-consuming. Overall the result is a lack of flexibility, damaging effectiveness . . .
>
> . . .
>
> Achieving improvements depends on seven factors.
>
> First, proposals must be prepared on the basis of an effective analysis of whether it is appropriate to intervene at EU level and whether regulatory intervention is needed . . . .
>
> Second, legislation is often only part of a broader solution combining formal rules with other non-binding tools such as recommendations, guidelines, or even self-regulation within a commonly agreed framework. This highlights the need for close coherence between the use of different policy instruments and for more thought to be given to their selection.
>
> Third, the right type of instrument must be used whenever legislation is needed to achieve the Union's objectives:
>
> The use of regulations should be considered in cases with a need for uniform application and legal certainty across the Union. This can be particularly important for the completion of the internal market and has the advantage of avoiding the delays associated with transposition of directives into national legislation.
>
> So-called 'framework directives' should be used more often. Such texts are less heavy-handed, offer greater flexibility as to their implementation, and tend to be agreed more quickly by Council and the European Parliament.Whichever form of legislative instrument is chosen, more use should be made of 'primary' legislation limited to essential elements (basic rights and obligations, conditions to implement them), leaving the executive to fill in the technical detail via implementing 'secondary' rules.
>
> Fourth, under certain conditions, implementing measures may be prepared within the framework of co-regulation. Co-regulation combines binding legislative and regulatory action with actions taken by the actors most concerned, drawing on their practical expertise. The result is wider ownership of the policies in question by involving those most affected by implementing rules in their preparation and enforcement. This often achieves better compliance, even where the detailed rules are non-binding.

Many of the Commission's concerns and suggestions here reflect or propose a move away from hierarchical governance. There is an emphasis on the need to involve actors other than the main EU legislative organs, and on reducing the degree of detail and prescriptiveness of legislation. There is mention of the need for a mixture of policy instruments, including a range of non-traditional instruments such as tripartite contracts,[67] and including some of the alternative regulatory methods discussed above, such as co-regulation, the OMC, recommendations, and guidelines.

The White Paper initiative and in particular the document itself have been criticized on numerous grounds, on the basis that few concrete proposals for change emerged, and the Commission appeared to be primarily concerned with defending its own role. Nevertheless, as can be seen from the extracts above, the White Paper embodies and advances several of the themes and proposals which originated in the subsidiarity and proportionality guidelines, and subsequently in the better regulation initiative, and clearly manifested the thinking of the Commission on the issue of governance reform.[68]

More recently in the context of the better regulation initiative the Commission has introduced the idea of 'smart regulation', which emphasizes the flexible nature of legislation, and the fact that the

[67] A framework for target-based tripartite contracts and agreements between the Community, the states and regional and local authorities, COM(2002)709. The environmental field has been identified as one of the primary areas for the development of tripartite contracts or agreements. In 2003, three pilot project initiatives for tripartite agreements in Birmingham (UK), Lille (France), and Pescara (Italy) on urban mobility, air quality, and management of green spaces, respectively, were granted support from the Commission.

[68] For recent developments in the better regulation initiative see the Commission's Progress reports on the strategy for simplifying the regulatory environment, COM(2009)17 and COM(2008)33, and its second and third strategic reviews of Better Regulation in the European Union, COM(2009)15 and COM(2008)32.

way it is interpreted and amended in the light of experience is crucial.[69] This idea of flexibility and reflexivity, the capacity to be interpreted and adapted in the light of experience, is emphasized in the scholarly literature on new governance, especially in the literature on experimentalist and reflexive governance.[70]

6 APPRAISING THE MOVE TOWARDS NEW FORMS OF GOVERNANCE

Below, two issues will briefly be addressed. First, various possible reasons for the rise of new governance methods in the EU will be considered. Secondly, some of the main appraisals and critiques of new governance will be discussed.

J Scott and D Trubek, Mind the Gap: Law and New Governance in the EU[71]

Why do we see increasing use of New Governance in the EU?

'[N]ew governance' covers a number of very disparate mechanisms each of which has its own particular history. Most, if not all, have emerged as pragmatic forms of accommodation between emerging needs of the Union and available mechanisms for policy making. While detailed histories of all these mechanisms are not available, six factors seem to explain the new governance trend.

a. Increasing complexity and uncertainty of the issues on the agenda

New governance can be seen as a way of coping with complex problems under conditions of uncertainty and thus the trend to new governance may well reflect the increasing salience of such complex problems on the Union's agenda. We can see this within the Union's traditional areas of competence as well as in some of the newer areas it is engaging with. Thus, for example, the unexpected complexities involved in 're-regulation' under the Single Market led to the emergence of the comitology system, and as the Union moves into new areas such as employment and social exclusion it starts to tackle problems that have stymied many Member States for years and for which no easy or uniform solution exists.

b. Irreducible diversity

Not only are many of the problems the Union is now dealing with highly complex; they also may simply not allow for uniform solutions. This is certainly true of many of the issues confronted by the European Employment Strategy (EES) OMC. The underlying systems of industrial relations and social protection of the fifteen Member States vary tremendously, and there is rarely one solution that will work effectively in all these diverse settings . . .

c. New approaches to public administration and law

The trend to new governance has undoubtedly been influenced by developments in the fields of public administration and law. One can see elements of some of the practices we are calling new governance in domestic administrative law and public administrative practice in Europe and the United States. In these fields, there has been a growing recognition of the limits of traditional top-down regulatory approaches, and repeated calls for things like power sharing, participation, management by objectives, and experimentation.

[69] Smart Regulation in the EU, COM(2010)543.

[70] See, eg, C Sabel and J Zeitlin (eds), *Experimentalist Governance in the European Union—Towards a New Architecture* (Oxford University Press, 2010); O De Schutter and J Lenoble (eds), *Reflexive Governance—Redefining the Public Interest in a Pluralistic World* (Hart, 2010).

[71] (N 7).

d. Competence 'creep'

Some of the new approaches may have been adopted to deal with areas where legal authority for EU level action is limited or non-existent. This may well be true of some of the areas to be covered by future OMCs. While the EES has a treaty base, there is no explicit treaty base for such areas as social exclusion and pensions. In such cases, new governance may or may not be the best available approach to policy making, but it may be the only way the Union can play a role in a particular domain.

e. Legitimacy

New Governance often reflects an effort to secure legitimacy for EU policy making. The social dialogue seems to solve some of the democratic deficit problems in the area it covers by essentially delegating law making authority to representatives of the parties to be affected by these laws. . . .

f. Subsidiarity

. . . While the pressure [suggested above] may well have impelled the Union towards new approaches had there been no independent subsidiarity doctrine, the strength of this doctrine and the political forces behind it certainly added impetus to the trend.

A slightly different, although broadly complementary, account of the reasons for the rise (or, to use their terms, the 'explosion') of new governance forms in the EU is given by Sabel and Zeitlin below. They provide an account of new governance in the EU as a form of experimentalism, and explain it in terms of an architecture with four key features: first, the setting of framework goals by the EU institutions and the states; secondly, freedom on the part of lower-level authorities or units to pursue those goals as they see fit; thirdly, a requirement that these lower-level authorities report regularly on their performance and participate in some form of mutually comparative peer-review; and fourthly, periodic review of the framework goals and of the processes by those who established them. They summarize the range of fields in which this new governance architecture is to be found, and suggest some of the main reasons for the rapid expansion:

C Sabel and J Zeitlin, Learning from Difference: The New Architecture of Experimentalist Governance in the EU[72]

Given the growing recognition of the need to learn from diversity in order to harmonize, coordinate, and revise regulatory rules without imposing an unworkable uniformity, the new architecture took shape roughly between the mid-1980s and 2000, i.e. between the Single European Act and the Lisbon Summit. For purposes of exposition, and with no pretension to taxonomic comprehensiveness or precision, we can say that the architecture was elaborated more or less independently in three domains: re-regulation of privatized network infrastructure, public health and safety, and social solidarity [*The authors also refer to Justice and Home Affairs as a fourth domain*]. . . .

From roughly the turn of the millennium onwards, as we will see, the new architecture became available not only as a response to catastrophic breakdowns in regulatory capacity (food safety, maritime safety/pollution) or the threat of these (financial market supervision), but also as a means for unblocking rule making in domains that had become stalemated by struggles between proponents of (traditional) centralization and (traditional) decentralization (competition policy, state aid). In this most recent period, innovations associated with one of the three originating domains of the new architecture are more and more often proposed for others (such as OMCs in occupational health and safety and fundamental rights or councils of national regulators attached to agencies in drug authorization and maritime safety—to mention only examples that we discuss below). This suggests that the actors perceive commonalities to the problems arising in the three domains, and for that reason are confident that variants of the problem-solving architecture that address these commonalities in one setting can be adapted to address them in others.

[72] (2008) 14 ELJ 271.

> Notice that the possibility or scope conditions for experimentalist governance are distinct and much broader than the historical contexts from which the new architecture emerged in particular policy sectors and in the EU more generally. The possibility conditions for experimentalist governance are arguably quite minimal: strategic uncertainty, meaning that policy makers recognize that they cannot rely on their strategic dispositions (e.g. more market vs. more plan) to guide action in a particular domain (or equivalently that they do not know *how* to achieve their declared goals); and a multi-polar or polyarchic distribution of power, in which no single actor has the capacity to impose her own preferred solution without taking into account the views of the others. . . . Together these conditions open up the possibility for transforming distributive bargaining into deliberative problem-solving through the institutional mechanisms of experimentalist governance.

Thus while Scott and Trubek emphasize the complexity of problems, the need to accommodate diversity, the lack of legal powers, the search for new ways of making policy-making more legitimate, and the political influence of the subsidiarity concept as reasons which explain the increasing adoption of new governance mechanism, Sabel and Zeitlin focus additionally on actual or potential crisis, the breakdown of regulatory authority, as well as the existence of uncertainty as to how to address problems in a situation of mutual interdependence. It is certainly evident from sources such the Lisbon conclusions that there was a great deal of uncertainty as to how to tackle a variety of the EU's social and economic problems, while documents such as the White Paper on Governance clearly reveal the anxiety of the Commission and other EU institutional actors in relation to the EU's perceived legitimacy and in relation to the effectiveness of its regulatory capacity and performance.

The verdict as to whether new governance methods have been successful in addressing complex EU social and economic problems where other methods of regulation have proven inadequate has been mixed. Many critics have focused on the question of effectiveness, since it is difficult to point to or to prove particular concrete results for some of the softer policy instruments, including the OMC. Evaluations of the impact, influence, and effectiveness of such instruments differ significantly.[73] Further, others have taken the view that, given the admitted inadequacies of command-and-control-type regulation in so many relevant fields, criticisms of new governance for not demonstrating adequate results are misdirected and premature. A separate argument is that some of the virtues of new governance methods are in the novel processes, and not just in their policy outcomes: the virtues of greater participation, for example, or the virtues of knowledge-creation and experimentation as goods in themselves; or the virtues of reflexivity and revisability in the face of changing circumstances.

Another set of critiques has focused less on the ineffectiveness of new governance mechanisms, and more on the assumption that they have an adverse impact on a range of constitutional values: on the institutional balance in the EU, on the rule of law, on fundamental rights, and on democracy itself.[74] Other analyses have focused on specific aspects of the legitimacy critique,[75] such as the problem of accountability,[76] and the problem of democratic or other forms of participation.[77] One robust

[73] See, eg, Citi and Rhodes (n 34); Moravcsik (n 34). (2007) 13 ELJ 505; C Harlow and R Rawlings, 'Promoting Accountability in Multilevel Governance: A Network Approach' (2007) 13 ELJ 542; Dawson (n 37).

[77] 'Efficient and Democratic Governance in a Multi-level Europe', Final report of Connex, available at www.connex-network.org/. See also the literature cited at (n 35).

response to these critiques is the suggestion that new governance modes may well necessitate some productive re-conceptualization of settled understandings of 'the institutional balance', legal values, and even of democracy, in particular in the non-state context of the EU.[78]

7 CONCLUSIONS

i. The topic of new governance modes in the EU is a lively and contested one. The rise of new regulatory methods is viewed by some with scepticism and distrust.
ii. There has been a concerted emphasis in the EU over the past two decades in particular on the need to reform governance in ways which depart from traditional, hierarchical forms of law-making and policy-making. Specific regulatory initiatives such as the New Approach and the OMC, as well as broader governance-reform initiatives such as the better regulation strategy and the operationalization of the principles of subsidiarity and proportionality, attest to this.
iii. The verdict thus far on the significance, impact, and legitimacy of new governance modes is mixed. Nevertheless, the rise of 'new', 'reflexive', or 'experimentalist' governance methods has given rise to a whole range of interesting and complex new research questions, as well as a set of challenges to traditional conceptions of law and legal regulation. Empirically based appraisals of the operation of new governance modes in various fields are beginning to appear, but as yet there is no firm consensus on the question of their influence and effectiveness.

8 FURTHER READING

The literature on new governance is vast, and for that reason the list of further reading includes only a selective range of electronic resources, books, and journal issues, in particular those with some legal focus, and does not list any individual papers or articles.

THE NATURE AND EFFECT OF EU LAW: DIRECT EFFECT AND BEYOND

1 CENTRAL ISSUES

i. The doctrine of 'direct effect' applies in principle to all binding EU law including the Treaties, secondary legislation, and international agreements. The most problematic issues concern directives and international agreements.[1]

ii. The meaning of direct effect remains contested. In a broad sense it means that provisions of binding EU law which are sufficiently clear, precise, and unconditional to be considered justiciable can be invoked and relied on by individuals before national courts. There is also a 'narrower' or classical concept of direct effect, which is defined in terms of the capacity of a provision of Union law to confer rights on individuals.

iii. While directives can be enforced directly by individuals against the state after the time limit for their implementation has expired (vertical direct effect), resulting where necessary in the disapplication of conflicting domestic law, the ECJ has ruled that they cannot of themselves impose obligations on individuals (no horizontal direct effect). The rationale for this limitation on direct effect of directives is however contestable.

iv. This is more especially so given that other legal mechanisms have been developed by the Court to give effect to directives which have not properly been implemented or are not being properly applied. First, there is a broad obligation on national courts to interpret domestic law, as far as possible, in conformity with directives (indirect effect) after the time limit for their implementation has expired. Secondly, during the period after adoption of a directive but before the time limit for implementation has expired, all organs of the state, including courts, must refrain from adopting any measure or interpretation liable seriously to compromise the result prescribed by the directive. Thirdly, a directive can in certain cases be legally invoked in proceedings between private parties (incidental effect) so long as the directive does not in itself impose a legal obligation on one of the parties. Fourthly, a general principle of EU law that covers the same ground as a directive can bind private parties. Finally, where a regulation refers to a directive and makes compliance with the directive conditional on receipt of benefits under the regulation this can bind private parties.

v. The number of qualifications to the rule that directives do not have horizontal direct effect, and the difficulties of each exception, has made this area of law increasingly complex and difficult to understand, even for experts, let alone ordinary private parties.

[1] The legal effect of international agreements is considered in Ch 10.

2 DIRECT EFFECT: A GUIDE

The topic dealt with in this chapter is central to EU law. It has been developed by the ECJ and its jurisprudence has become more complex over the years. The discussion in this section is therefore designed to help the reader navigate through the difficult waters that lie ahead. Or, if you prefer a different metaphor, regard this section as programme notes to render the scenes of a complex play more readily understandable. This is all the more so since, as will be apparent, the story is still unfolding.

(1) The starting point is the distinction between *public and private enforcement*. Law can be enforced either through a public arm of government, which is accorded power to bring infringers to court, or through actions brought by private individuals, or an admixture of the two. The Treaty has an express mechanism for public enforcement in Article 258 TFEU, allowing the Commission to sue Member States before the ECJ for breach of EU law. This compulsory jurisdiction was unusual, since most international treaties contained no such mechanism. There are however limits to this mode of enforcement: the Commission did not have the capacity to prosecute more than a tiny fraction of possible infringements; the remedy under Article 169 EEC, the original version of public enforcement, was weak; and the Article could not be used against private individuals.[2]

(2) The ECJ therefore took the bold step of legitimating *private enforcement*. It held that Treaty Articles could on certain conditions have direct effect, such that individuals could rely on them before their national courts and challenge national action for violation of Community law. This thereby brought individuals into the Community legal order. The domestic effect of an international treaty was traditionally determined by the constitutional law of each state party to that treaty. In countries which adopt a dualist approach to international law, international agreements do not of themselves give rise to rights that citizens can invoke before national courts. Such treaties bind only the states at an intergovernmental level and, in the absence of implementation, cannot be directly domestically enforced by citizens.[3] The original Member States probably felt that the EEC Treaty would be treated in the same way. The ECJ nonetheless held that the EEC Treaty was different from other treaties and that individuals could derive rights from its provisions, which could be enforced at national level.

(3) There was, however, from the outset *uncertainty about the exact meaning of the term direct effect*.[4] It is possible on the basis of the ECJ's case law to adopt either a broad or a narrow definition of direct effect.[5] The broader definition, which can arguably be derived from *Van Gend en Loos*, can be expressed as *the capacity of a provision of EU law to be invoked before a national court*.[6] This is sometimes referred to as 'objective' direct effect.[7] The normal consequence of

Back to Basics' (2000) 25 ELRev 509; C Hilson and T Downes, 'Making Sense of Rights: Community Rights in EC Law' (1999) 24 ELRev 121.

[6] In Case 26/62 *Van Gend en Loos* [1963] ECR 13 the ECJ ruled that Art 12 should be interpreted 'as producing direct effects and creating individual rights', thus implying that the latter followed from, but was not necessarily a condition for, the former.

[7] W van Gerven, 'Of Rights, Remedies and Procedures' (2000) 37 CMLRev 501; D Edward, 'Direct Effect, the Separation of Powers and the Judicial Enforcement of Obligations' in *Scritti in Onore di Giuseppe Federico Mancini, II, Diritto dell' Unione Europea* (Guiffrè, 1998) 423.

a legal provision being invoked, as in *Van Gend en Loos*, is that it confers a legal right on the individual who invokes it, but this is not, on the broader definition, an essential component of direct effect. The narrower 'classical' definition of direct effect is usually expressed in terms of the *capacity of a provision of EU law to confer rights on individuals which they may enforce before national courts*. This is sometimes referred to as 'subjective' direct effect. The degree of difference between these formulations depends however on the definition of 'right' being used. If what is meant is simply the *right to invoke* EU law in a national court,[8] then there is little difference between the narrow and the broad notions of direct effect.[9] In many other cases, however, the ECJ has gone beyond the simple reference to a right to invoke, and has indicated that an individual litigant can rely before a national court on the substantive right, such as the right to be free from discrimination based on nationality.[10] Moreover if the 'conferral of rights on individuals' involves the entitlement to a particular remedy[11] or the imposition of a corresponding duty or liability on another party,[12] then there may well be a relevant difference between the broad and the narrow definitions. In reality, the ECJ seems to use the language of 'conferral of rights' in the context of direct effect in several different senses. Thus even the narrow definition of direct effect in subjective terms as 'the conferral of individual rights' is not particularly precise, given the ambiguity in the notion of 'rights'. The ambiguity in the meaning of direct effect is not however of purely academic interest. It has, as will be seen below, important practical implications.[13]

(4) The next stage of the story was predictable: *the expansion of direct effect*. The ECJ, having established that Treaty Articles could have direct effect, expanded the concept in two ways: the conditions for direct effect were subtly loosened, and direct effect thus modified was applied to regulations and decisions as well as Treaty Articles.

(5) The *judicial focus then shifted to directives*. Many commentators and national courts doubted whether directives could have direct effect, since they did not meet the original conditions laid down in *Van Gend*. The ECJ nonetheless held that directives were capable in principle of direct effect. It however also held that directives were only capable of *vertical direct effect*, meaning that they could only be raised against the state or a state entity. They were not capable of having *horizontal direct effect*, in the sense that they could not impose obligations on a private party. The reasons for this ruling are controversial.

(6) *The vertical/horizontal distinction applied to directives has generated a complex jurisprudence.* This is so for two reasons. First, the vertical/horizontal distinction required the ECJ and national courts to differentiate between state entities and non-state entities. Secondly, the ECJ has fashioned numerous ways in which, even though directives do not have horizontal direct effect, they can impact on national law. Thus the ECJ created the doctrine of 'indirect effect', which means that even if directives do not have horizontal direct effect, national courts have an

[8] Case C–63/99 *Gloszczuk* [2001] ECR I–6369; Case C–257/99 *Barkoci and Malik* [2001] ECR I–6557; Case C–235/99 *Kondova* [2001] ECR I–6427; Case C–268/99 *Jany* [2001] ECR I–8615; Case C–327/02 *Panayotova* [2004] ECR I–11055, [18].

[9] A related question, if the narrower 'subjective' definition is adopted, concerns *who* can invoke the rights conferred by a directly effective provision of law: see Cases C–87–89/90 *Verholen* [1991] ECR I–3757; Case C–72/95 *Kraaijeveld* [1996] ECR I–5403, [57]–[60]; Cases C–240–244/98 *Océano Grupo Editorial v Rocio Murciano Quintero* [2000] ECR I–4491; Case C–230/97 *Awoyemi* [1998] ECR I–6781.

[10] Case 57/65 *Lütticke v Hauptzollamt Sarrelouis* [1966] ECR (Sp Ed) 205.

[12] Hilson and Downes (n 5).

[13] Thus, eg, the ECJ has held that even though directives do not give rise to rights between private parties they can nonetheless be invoked in certain ways before national courts: 200–215.

obligation to interpret national law to be in conformity with directives. It also fashioned what has been termed the concept of 'incidental horizontal effects', whereby a directive can preclude reliance on a provision of national law that is inconsistent with the provisions of the directive even in an action between private parties. This is premised on the primacy of EU law and entails a distinction between a directive having an 'exclusionary' impact, which in effect connotes the idea that the directive 'knocks out' or 'excludes' inconsistent national law; and a directive having a 'substitution' effect, which connotes the idea that the directive will in itself mandate certain novel EU legal consequences within the national legal order.[14] The tenability of this distinction is questionable, as will be seen below. The ECJ has more recently held that general principles of law can bind private parties and that the content of the general principle can be drawn from a directive. It has also decided that directives can be enforced horizontally when they are referred to in regulations. The net result of all this has been an increasingly complex case law that is difficult for litigants and national courts.

(7) The story recounted in outline here is still ongoing. The end point remains to be seen. What is apparent is that direct effect in the classic 'subjective' sense of the capacity of a provision of EU law to confer rights on individuals that they may enforce before national courts, is increasingly seen as but one way for Union law to impact on national law. On this view classic direct effect, indirect effect, and incidental horizontal effect provide different ways in which EU law can impact on national legal systems.[15] The impact of these developments will be considered in due course. For the present we turn to the foundations of direct effect laid down in the seminal decision in *Van Gend en Loos*.

3 DIRECT EFFECT: TREATY PROVISIONS

(A) FOUNDATIONS: *VAN GEND EN LOOS*

The ECJ first articulated its doctrine of direct effect in 1963 in what remains the most famous of all of its rulings.

Case 26/62 **NV Algemene Transporten Expeditie Onderneming van Gend en Loos v Nederlandse Administratie der Belastingen**
[1963] ECR 1

[Note Lisbon Treaty renumbering: Art 12 is now Art 30 TFEU, Art 169 is now Art 258 TFEU, Art 170 is now Art 259 TFEU, and Art 177 is now Art 267 TFEU]

Van Gend en Loos imported a quantity of a chemicals from Germany into the Netherlands. It was charged with an import duty which had allegedly been increased (by changing the tariff classification from a lower to a higher tariff-heading) since the coming into force of the EEC Treaty, contrary to Article 12. On appeal against payment before the Dutch Tariefcommissie, Article 12 was raised in argument and two questions were referred to the ECJ under Article 177 EC. The first was 'whether Article 12 of the EEC Treaty has direct application within the territory of a Member State; in other words, whether nationals of such a State can, on the basis of the Article in question, lay claim to

[14] Case C–244/98 *Océano Grupo* (n 9) [26]–[39], AG Saggio; Case C–287/98 *Luxemburg v Linster* [2000] ECR I–6917, [57]–[90], AG Leger.

[15] K Lenaerts and T Corthaut, 'Of Birds and Hedges: The Role of Primacy in Invoking Norms of EU Law' (2006) 31 ELRev 287.

individual rights which the courts must protect'. Observations were submitted to the ECJ by the Belgian, German, and Netherlands governments. Belgium argued that the question was whether a national law ratifying an international Treaty would prevail over another law, and that this was a question of national constitutional law which lay within the exclusive jurisdiction of the Netherlands court. The Netherlands government argued that the EEC Treaty was no different from a standard international Treaty, and that the concept of direct effect would contradict the intentions of those who had created the Treaty.

THE ECJ

To ascertain whether the provisions of an international treaty extend so far in their effects it is necessary to consider the spirit, the general scheme and the wording of those provisions.

The objective of the EEC Treaty, which is to establish a Common Market, the functioning of which is of direct concern to interested parties in the Community, implies that this Treaty is more than an agreement which merely creates mutual obligations between the contracting states. This view is confirmed by the preamble to the Treaty which refers not only to governments but to peoples. It is also confirmed more specifically by the establishment of institutions endowed with sovereign rights, the exercise of which affects Member States and also their citizens. Furthermore, it must be noted that the nationals of the states brought together in the Community are called upon to cooperate in the functioning of this Community through the intermediary of the European Parliament and the Economic and Social Committee.

In addition the task assigned to the Court of Justice under Article 177, the object of which is to secure uniform interpretation of the Treaty by national courts and tribunals, confirms that the states have acknowledged that community law has an authority which can be invoked by their nationals before those courts and tribunals. The conclusion to be drawn from this is that the Community constitutes a new legal order of international law for the benefit of which the states have limited their sovereign rights, albeit within limited fields, and the subjects of which comprise not only Member States but also their nationals. Independently of the legislation of Member States, Community law therefore not only imposes obligations on individuals but is also intended to confer upon them rights which become part of their legal heritage. These rights arise not only where they are expressly granted by the Treaty, but also by reason of obligations which the Treaty imposes in a clearly defined way upon individuals as well as upon the Member States and upon the institutions of the Community. . . .

The wording of Article 12 contains a clear and unconditional prohibition which is not a positive but a negative obligation. This obligation, moreover, is not qualified by any reservation on the part of states which would make its implementation conditional upon a positive legislative measure enacted under national law. The very nature of this prohibition makes it ideally adapted to produce direct effects in the legal relationship between Member States and their subjects.

The implementation of Article 12 does not require any legislative intervention on the part of the states. The fact that under this Article it is the Member States who are made the subject of the negative obligation does not imply that their nationals cannot benefit from this obligation. . . .

It follows from the foregoing considerations that, according to the spirit, the general scheme and the wording of the Treaty, Article 12 must be interpreted as producing direct effects and creating individual rights which national courts must protect.

In addition the argument based on Articles 169 and 170 of the Treaty put forward by the three governments which have submitted observations to the court in their statements of case is misconceived. The fact that these Articles of the Treaty enable the Commission and the Member States to bring before the court a state which has not fulfilled its obligations does not mean that individuals cannot plead these obligations, should the occasion arise, before a national court. . . .

> A restriction of the guarantees against an infringement of Article 12 by Member States to the procedures under Article 169 and 170 would remove all direct legal protection of the individual rights of their nationals . There is the risk that recourse to the procedure under these articles would be ineffective if it were to occur after the implementation of a national decision taken contrary to the provisions of the Treaty .
>
> The vigilance of individuals concerned to protect their rights amounts to an effective supervision in addition to the supervision entrusted by Articles 169 and 170 to the diligence of the Commission and of the Member States.

Van Gend en Loos was a ground-breaking judgment. The strong interventions made on behalf of three governments, half of the existing Member States, indicated that the concept of direct effect, understood as the *immediate enforceability by individual applicants of those provisions in national courts*, probably did not accord with the understanding of those states of the obligations they assumed when they created the EEC. They argued that international treaties were really just a compact between states and did not give rise to rights that individuals could enforce in national courts. They also contended that the sole method of enforcing Community law was through an action under what is now Article 258 TFEU, brought by the Commission. The ECJ nonetheless held that Treaty Articles could in principle have direct effect.

It *reasoned partly from the text of the Treaty*. It pointed to the Preamble which makes reference to citizens as well as to states, and argued that the preliminary-ruling procedure established in what is now Article 267 TFEU envisaged that parties before national courts could plead and rely on points of Community law. The ECJ pointed also to the fact that citizens were envisaged as having a role to play under the Treaties through the European Parliament. This textual 'evidence' for direct effect is not particularly strong. The ECJ's argument based on Article 267 TFEU is nonetheless interesting and subtle. We do not have the *travaux préparatoires* and hence we do not know what the Treaty framers intended with this provision. If however individuals could not invoke EC law in national courts through Article 267 then it could only ever be used if the parties to the case were both public bodies, and there is nothing in the wording of Article 267 to indicate any such limitation. The very existence of Article 267 therefore lent force to the argument that individuals could at the very least invoke Community law at national level and challenge inconsistent national action. It was therefore unsurprising that the ECJ should replay this same argument when it justified the direct effect of directives.[16]

The ECJ's *reasoning was also characterized by a vision of the kind of legal community that the Treaties seemed designed to create*. The case provides an early example of the ECJ's teleological methodology, which involves the Court reading the text, and the gaps therein, in such a way as to further what it determines to be the underlying and evolving aims of the Community enterprise as a whole. The ECJ's vision for the EEC was very different from that advanced by the Member States.

It held that the Community was not to be regarded as simply a compact between states, but was also concerned with the peoples of those states. The famous language of a 'new legal order of international law' was designed to legitimate the conclusion that the EEC Treaty was different from other international treaties, in that individuals could derive rights from the EEC Treaty, even if that was not normally the case. There was clearly an element of circularity in this argument. The very decision whether direct effect did or did not exist was of crucial importance in deciding whether the EEC Treaty really could be regarded as distinct from other international treaties. Major constitutional developments are however not infrequently characterized by such reasoning.

The ECJ also rejected the other argument of the Member States. It held that public enforcement of EEC law through the Commission via what is now Article 258 TFEU did not preclude private

[16] See below, 192–193.

enforcement via direct effect. Thus the Court developed the concept of direct effect principally in view of the kind of legal system it considered necessary to carry through the ambitious economic and political programme outlined in the Treaties. The ECJ considered that strong enforcement was needed to ensure that Member States complied with the provisions to which they had agreed. Automatic internalization of Treaty rules within national legal systems would clearly strengthen the effectiveness of Community norms as well as aiding the Commission in its Article 258 enforcement function by involving individuals and all levels of the national court system directly in their implementation. Consider in this respect the view of Pierre Pescatore, a former judge of the Court.

P Pescatore, The Doctrine of 'Direct Effect': An Infant Disease of Community Law[17]

It appears from these considerations that in the opinion of the Court, the Treaty has created a Community not only of States but also of peoples and persons and that therefore not only Member States but also individuals must be visualised as being subjects of Community law. This is the consequence of a democratic ideal, meaning that in the Community, as well as in a modern constitutional State, Governments may not say any more what they are used to doing in international law: *L'Etat, c'est moi*. Far from it; the Community calls for participation of everybody, with the result that private individuals are not only liable to burdens and obligations, but that they have also prerogatives and rights which must be legally protected. It was thus a highly political idea, drawn from a perception of the constitutional system of the Community, which is at the basis of *Van Gend en Loos* and which continues to inspire the whole doctrine flowing from it.

(B) THE CONDITIONS FOR DIRECT EFFECT: BROADENING THE CONDITIONS

The ECJ in *Van Gend en Loos* established the initial conditions for a Treaty Article to have direct effect. It established the requirement, familiar from international law, that a provision be essentially 'self-executing'. Thus the criteria which were met by Article 12 EEC and which enabled it to have direct effect were that it was: *clear, negative, unconditional, containing no reservation on the part of the Member State, and not dependent on any national implementing measure*. The subsequent development of direct effect saw the broadening and loosening of these initial conditions.

The condition that the Treaty Article should be *clear and unconditional, containing no reservation on the part of the Member States,* was qualified within a few years of the *Van Gend* ruling. The ECJ held that the existence of Member State discretion to, for example, prevent the free movement of goods on the grounds in what is now Article 36 TFEU did not preclude the direct effect of Article 34 TFEU, since the cases coming within Article 36 were exceptional and did not undermine the clear obligation in Article 34.[18] Similarly in *Van Duyn*[19] the ECJ rejected the argument that what is now Article 45(3) TFEU, which allows limitations on the free movement of workers on grounds of public policy, public security, or public health, prevented Article 45 from having direct effect, because 'the applications of these limitations is subject to judicial control'.[20] The idea that direct effect could apply even where the Member States possessed discretion, because the exercise thereof could be judicially controlled, represented a significant juridical shift in thinking about direct effect.

[17] (1983) 8 ELRev 155, 158.

[18] Case 13/68 *SpA Salgoil v Italian Ministry of Foreign Trade* [1968] ECR 453.

[19] Case 41/74 *Van Duyn v Home Office* [1974] ECR 1337.

[20] Ibid [7]; Case C–156/91 *Hansa Fleisch Ernst Mundt GmbH & Co KG v Landrat des Kreises Schleswig-Flensburg* [1992] ECR I–5567, [15].

The *idea that direct effect was precluded where further measures were required at national level* was also modified. The ECJ's strategy was to fasten on the *basic principle* that governed the relevant area, and, provided that this was sufficiently certain, it would accord it direct effect, notwithstanding the absence of implementing measures at Community and national level.[21] Thus Article 49 TFEU, for example, provided that restrictions on freedom of establishment of Community nationals in states other than that of their nationality were to be abolished 'within the framework of the provisions set out below'. This framework was to have included a general programme and a set of directives to liberalize the activities of employed and self-employed persons, but few of these had been adopted by the time the *Reyners* case arose in 1973.

Case 2/74 **Reyners v Belgium**
[1974] ECR 631

[Note Lisbon Treaty renumbering: Arts 52, 54, and 57 are now Arts 49, 50, and 53 TFEU]

Reyners was a Dutch national who obtained his legal education in Belgium, but was refused admission to the Belgian Bar (as *avocat*) because he lacked Belgian nationality. He challenged the Belgian legislation before the Conseil d'Etat, which referred several questions to the ECJ, including whether Article 52 was directly effective in the absence of implementing directives under Articles 54 and 57. The Belgian government argued that Article 52 merely laid down a principle that was to be complemented by secondary legislation, and that it was not for the Court to exercise a discretionary power reserved to the legislative institutions of the Community and the Member States.

THE ECJ

24. The rule on equal treatment with nationals is one of the fundamental legal provisions of the Community.

25. As a reference to a set of legislative provisions effectively applied by the country of establishment to its own nationals, this rule is, by its essence, capable of being directly invoked by nationals of all the other Member States.

26. In laying down that freedom of establishment shall be attained at the end of the transitional period, Article 52 thus imposes an obligation to attain a precise result, the fulfilment of which had to be made easier by, but not made dependent on, the implementation of a programme of progressive measures.

27. The fact that this progression has not been adhered to leaves the obligation itself intact beyond the end of the period provided for its fulfilment. . . .

. . .

29. It is not possible to invoke against such an effect the fact that the Council has failed to issue the directive provided for by Articles 54 and 57 or the fact that certain of the directives actually issued have not fully attained the objective of non-discrimination required by Article 52.

30 After the expiry of the transitional period the directives provided for by the Chapter on the right of establishment have become superfluous with regard to implementing the rule on nationality, since this is henceforth sanctioned by the Treaty itself with direct effect.

Thus the ECJ determined that, despite the slow pace of harmonization of national laws, the Treaty could be directly invoked by individuals to challenge obvious instances of nationality discrimination. The basic principle of non-discrimination was deemed to be directly effective, even though the

[21] Case C–268/06 *Impact v Minister for Agriculture and Food* [2008] ECR I–2483, [66]–[67].

conditions for genuine freedom of establishment were far from being achieved. Whereas many cases on direct effect concern the enforcement of obligations against a Member State which has failed properly to implement Community requirements, the *Reyners* case shows the Court employing direct effect to compensate for insufficient action on the part of the Community legislative institutions.

A similar use of direct effect to 'trigger' proper implementation of a Treaty provision can be seen in the second *Defrenne* judgment,[22] which relaxed further the original *Van Gend en Loos* criteria for direct effect. While in *Reyners*, the terms of Article 49 seemed to envisage further implementing measures, Article 141 EC[23] in *Defrenne* appeared to lack sufficient precision to be directly enforced by a national court. Article 141 at that time required states to ensure 'the application of the principle that men and women should receive equal pay for equal work'. Unlike the Treaty provisions in *Van Gend* and *Costa*, Article 141 did not impose a very precise negative obligation on the Member States. The term 'principle', for example, is not very specific, nor were the terms 'pay' and 'equal work' defined. Neither the Commission, nor the states, considered the provision to be directly effective or legally complete.[24] The Court, however, identified and isolated the *principle* of Article 141 at the time, that of equal pay for equal work, rather than focus on the fact that there might be cases, unlike the one at hand, involving complex factual questions regarding 'work of equal value' concerning jobs which were different in nature.

The Court's concern in such cases seems to have been to ensure that the Community's aims were not ignored either by reluctant Member States or by sluggish Community institutions, during the years of so-called legislative sclerosis which followed the Luxembourg Accords.[25] This story has been told most fully in the important work of Weiler.[26] He explains how impediments to attainment of Community objectives through the political process, decisional supranationalism, led to the growing importance of normative supranationalism. The doctrines of direct effect and the supremacy of Community law were central in this respect, enabling the ECJ to develop EC law, notwithstanding the difficulties in securing enactment through the legislative process. If a national court was unsure of the exact meaning of the relevant provision, the ECJ was more than willing to clarify its scope in a preliminary ruling under Article 234.

The original conditions for direct effect have therefore been loosened in the years since *Van Gend en Loos*, although there are still cases where the ECJ finds that a Treaty Article does not have direct effect.[27] The current position can be summarized as follows: *a Treaty Article will be accorded direct effect provided that it is intended to confer rights*[28] *on individuals and that it is sufficiently clear, precise and unconditional*.[29] This criterion clearly leaves the Union Courts with considerable room for manoeuvre. A provision of EU law is unconditional where it sets out an obligation that is not qualified by any condition, or subject in its implementation or effects to the taking of any measure either by the EU institutions or by the Member States. It is sufficiently precise to be relied on by an individual and applied by a court where it sets out an obligation in unequivocal terms.[30]

(c) TREATY ARTICLES: VERTICAL AND HORIZONTAL DIRECT EFFECT

In most instances the claimant will seek to use direct effect vertically, against the state or an emanation of the state. It is however clear that Treaty Articles can have horizontal direct effect, such as to impose an obligation on a private party.

Case C–438/05 **International Transport Workers' Federation and Finnish Seamen's Union v Viking Line ABP and OÜ Viking Line Eesti**
[2007] ECR I–10779

The dispute arose between trade unions and Viking Line, a shipping company, concerning rates of pay. The unions sought to prevent Viking from shifting its legal base to Estonia, because this would result in lower rates of pay for seamen as compared with what they earned when Viking was legally based in Finland. Viking argued, *inter alia*, that the unions' labour action violated the Treaty provisions on freedom of establishment. The ECJ therefore considered whether these provisions had horizontal direct effect.

THE ECJ

56. By that question, the referring court is asking in essence whether Article 43 EC is such as to confer rights on a private undertaking which may be relied on against a trade union or an association of trade unions.

57. In order to answer that question, the Court would point out that it is clear from its case-law that the abolition, as between Member States, of obstacles to freedom of movement for persons and freedom to provide services would be compromised if the abolition of State barriers could be neutralised by obstacles resulting from the exercise, by associations or organisations not governed by public law, of their legal autonomy (Walrave and Koch, paragraph 18; Bosman, paragraph 83; Deliège, paragraph 47; Angonese, paragraph 32; and Wouters and Others, paragraph 120).

58. Moreover, the Court has ruled, first, that the fact that certain provisions of the Treaty are formally addressed to the Member States does not prevent rights from being conferred at the same time on any individual who has an interest in compliance with the obligations thus laid down, and, second, that the prohibition on prejudicing a fundamental freedom laid down in a provision of the Treaty that is mandatory in nature, applies in particular to all agreements intended to regulate paid labour collectively (see, to that effect, Case 43/75 Defrenne [1976] ECR 455, paragraphs 31 and 39).

59. Such considerations must also apply to Article 43 EC which lays down a fundamental freedom.

...

62. This interpretation is also supported by the case-law on the Treaty provisions on the free movement of goods, from which it is apparent that restrictions may be the result of actions by individuals or groups of such individuals rather than caused by the State (see Case C–265/95 Commission v France [1997] ECR I–6959, paragraph 30, and Schmidberger, paragraphs 57 and 62).

...

66. In the light of those considerations, the answer to the second question must be that Article 43 EC is capable of conferring rights on a private undertaking which may be relied on against a trade union or an association of trade unions.

4 DIRECT EFFECT: REGULATIONS AND DECISIONS

The principal types of EU legal act are set out in Article 288 TFEU, and were analysed in an earlier chapter.[31] All binding forms of EU law are capable of direct effect, and while other types of non-binding law are not said to have direct effect, they are influential in other ways and may have what has become known as indirect effect.[32]

(A) REGULATIONS

We saw in *Van Gend* that the textual basis for the conclusion that Treaty provisions could have direct effect was not compelling. However, Article 288 TFEU provides that a regulation 'shall be binding in its entirety and directly applicable in all Member States'. Policy considerations aside, this language seems to envisage that regulations will immediately become part of the domestic law of Member States, without needing transposition. If they are immediately part of the domestic law of Member States there is no reason why, so long as their provisions are sufficiently clear, precise, and relevant to the situation of an individual litigant,[33] they should not be capable of being relied upon and enforced by individuals before their national courts.[34] The key issue will be whether the particular article of the regulation on which the individual relies is sufficiently clear, precise, and certain for direct effect.

The direct effect of regulations was affirmed in the *Slaughtered Cow* case, where the ECJ chastized the Italian government for choosing a method of implementing a regulation which cast doubt on the legal nature and direct applicability of that measure. It held that all methods of implementation were contrary to the Treaty 'which would have the result of creating an obstacle to the direct effect of Community Regulations and of jeopardizing their simultaneous and uniform application in the whole of the Community'.[35] In *Muñoz*[36] the ECJ stated that 'owing to their very nature and their place in the system of sources of Community law, regulations operate to confer rights on individuals which the national courts have a duty to protect'.

A national measure enacted to give effect to a regulation will not however necessarily be invalid. In *Amsterdam Bulb*, the ECJ ruled that it is only if a national measure alters, obstructs, or obscures the direct effect or nature of the regulation that it will constitute a breach of EU law.[37] The concern seems to be that if a Member State's implementation of a regulation conceals the fact that it is a Union regulation, it could have adverse consequences for the EU, since the particular qualities of EU law (that it takes priority over conflicting national law, that there must be adequate remedies for breach, that it may be subject to different methods of interpretation) may be ignored. Further, the ECJ was clearly concerned that Member States might adversely affect the content of the regulation through their implementing measures. Nonetheless, in *Amsterdam Bulb* the ECJ accepted that states could provide in national legislation for appropriate sanctions that were not provided for in the regulation, and could continue to regulate various related issues that were not covered in the regulation. Indeed, in some cases a regulation may positively *require* national implementing measures.[38]

[31] Ch 4.

[38] Case C–403/98 *Azienda Agricola Monte Arcosu* (n 33) [26].

(B) DECISIONS

The Treaty wording in relation to decisions has been altered. Article 249 EC stated that 'a decision shall be binding in its entirety on those to whom it is addressed'. Article 288 TFEU now states that:

> A decision shall be binding in its entirety. A decision which specifies those to whom it is addressed shall be binding only on them.

The relevance of this change and the different forms of decision were considered in an earlier chapter.[39] The ECJ in *Grad* had little hesitation in holding that decisions could be directly effective, despite the fact that Article 249 EC made no reference to their 'direct applicability'.[40] In an often-repeated phrase, the Court ruled that it did not follow from this 'that other categories of legal measures mentioned in that Article can never produce similar effects', and it relied on the principle of effectiveness to conclude that decisions could in suitable cases be invoked by individuals before national courts.[41]

Returning to our earlier discussion of the narrower and the broader conceptions of direct effect, the ECJ in this judgment discussed direct effect in terms of the right of an individual to 'invoke the obligation' created by a decision before a national court, the broad notion of invocability, but also spelt out in some detail the substance of that obligation, the more precise notion of conferral of rights. It will however, as in the context of regulations, be necessary to show that the particular provision of the decision is sufficiently certain, precise, and unconditional for direct effect.[42]

The paradigm case will involve an individual who invokes a decision against a Member State: vertical direct effect. The ECJ is reluctant to conclude that a decision addressed to a Member State can produce obligations enforceable against private parties: horizontal direct effect. Thus in *Carp*[43] the ECJ held that a decision addressed to Member States specifying the conformity procedures applicable to certain building materials did not impose obligations on private parties. This conclusion is reinforced by the wording of Article 288 TFEU, which now states that a decision which specifies those to whom it is addressed is binding only on them. A decision can however be addressed to a private party, in which case it will bind the addressee, and this is reinforced by the wording of Article 288. In such cases the decision may create horizontal direct effect between private parties, provided that the obligation specified is sufficiently precise, certain, and unconditional.[44]

5 DIRECTIVES: DIRECT EFFECT

(A) DIRECT EFFECT OF DIRECTIVES

(i) *Foundations:* Van Duyn *and* Ratti

The key reason given by the Court for the direct effect of Treaty provisions was that the fundamental aims of the Treaty would be seriously hampered if its provisions could not be domestically enforced by those affected. The explanation for the direct effect of regulations was more straightforwardly textual: Article 288 TFEU specifically provided for their direct applicability, from which the Court

[44] Ibid [58], AG Trstenjak.

deduced that they had the capacity to be invoked by individuals before national courts and to confer rights on them. In the case of decisions, the ECJ took the view that, since they were intended to be binding upon addressees, there was no reason why they should not be directly enforced before a national court where their provisions were sufficiently clear.

The position of directives under the Treaty is different. Under Article 288, a directive 'shall be binding as to the result to be achieved, upon each Member State to which it is addressed, but shall leave to the national authorities the choice of form and methods'. National implementation of directives is specifically envisaged by the Treaty for the following reason. The directive is one of the main EU harmonization instruments used to coordinate Member States' laws. The directive may be a compromise between Member States on a complex matter, and may leave discretionary options to states. Eventual implementation need not be uniform in every Member State, although the actual aim of the directive must be properly secured in each.

It follows that some of the criteria for direct effect laid down in the early case law are missing. A directive may well leave some discretion to the Member States; it will always require further implementing measures; and if it sets out its aim only in general terms, it may not be sufficiently precise to allow for proper national judicial enforcement. It was therefore difficult to reconcile the original criteria for direct effect— precision, unconditionality, the absence of discretion, and the absence of a need for implementing measures—with the nature of directives.

However, it is nonetheless the case that the aims of legal integration and effectiveness which underpinned the ECJ's original articulation of direct effect of Treaty provisions may be equally applicable to directives. Many important areas of EU policy rely on the proper implementation of EU directives. If states fail to implement, or do not apply, such measures properly, those Union policies will suffer. The ECJ therefore sought to promote the legal effectiveness of directives even in the absence of their implementation. It held that directives could in principle have direct effect. It gave three reasons for this, two in *Van Duyn*, and the third in *Ratti*.

Case 41/74 **Van Duyn v Home Office**
[1974] ECR 1337

[Note Lisbon Treaty renumbering: Arts 48, 177, and 189 are now Arts 45, 267, and 288 TFEU]

THE ECJ

12. [I]t would be incompatible with the binding effect attributed to a directive by Article 189 to exclude, in principle, the possibility that the obligation which it imposes may be invoked by those concerned. In particular, where the Community authorities have, by directive, imposed on Member States the obligation to pursue a particular course of conduct, the useful effect of such an act would be weakened if individuals were prevented from relying on it before their national courts and if the latter were prevented from taking it into consideration as an element of Community law. Article 177, which empowers national courts to refer to the Court questions concerning the validity and interpretation of all acts of the Community institutions, without distinction, implies furthermore that these acts may be invoked by individuals in the national courts. It is necessary to examine, in every case, whether the nature, general scheme and wording of the provision in question are capable of having direct effects on the relations between Member States and individuals.

The first reason given by the ECJ is functional: directives are binding and will be more effectively enforced if individuals can rely on them. This exemplifies the theme set out above: private enforcement via direct effect complements public enforcement under Article 258, thereby strengthening the overall effectivness of EU law.

The second reason is textual: Article 177, now Article 267 TFEU, allows national courts to refer questions concerning any EU measure to the ECJ, including directives, and this implies that such acts can be invoked by individuals before national courts. The ECJ had, as we have seen, used this reasoning in *Van Gend* and had recourse to it once again to bolster the argument for direct effect of directives.

The third rationale, articulated in the *Ratti* case,[45] is the estoppel argument: Member States were precluded by their failure to implement a directive properly from refusing to recognize its binding effect in cases where it was pleaded against them. Thus, the argument is as follows. The Member State should have implemented the directive. If it had done so the individual would have been able to rely on the national implementing law. The Member State had committed a wrong by failing to implement the directive, and could not rely on that wrongdoing so as to deny the binding effect of the directive itself after the date for implementation. Where necessary, a conflicting national law should be disapplied.[46]

(ii) *Subsequent Application: Sufficiently Clear and Precise Provisions of a Directive*

The net effect of these rulings was that directives were capable in principle of having direct effect. The key issue was whether the particular provision of the directive was sufficiently clear, precise, and unconditional to be capable of being applied directly by a national court.[47] The fact that Member States can choose the means of achieving the result required by a directive does not preclude direct effect where the content of the individual's right can be determined with sufficient precision from the directive.[48]

In *Van Duyn*, Directive 64/221 allowed Member States to take measures restricting the movement of non-nationals on grounds such as public policy, without defining the permissible range of public-policy concerns. The ECJ ruled that by providing that measures taken on public-policy grounds had to be based on the personal conduct of the individual, the directive had limited the discretionary power conferred on states. The obligation imposed was clear, precise, and legally complete.

In most,[49] though not all,[50] later cases the ECJ ruled that the existence of discretion would not prevent a directive from being directly relied upon by an individual. Thus the individual can rely on the directive where a Member State has fully exercised its discretion on implementation;[51] where the state has chosen not to exercise a particular discretionary option;[52] where a clear and precise obligation can be separated out from other parts of a directive;[53] and where a clear obligation of result can be identified.[54]

[54] Case C–476/01 *Criminal proceedings against Felix Kapper* [2004] ECR I–5205.

More controversially, in *Kortas*, the ECJ ruled that the possibility for a Member State to derogate from a harmonizing directive under Article 95(4) EC did not prevent the directive from having direct effect, nor preclude an individual from relying directly on its provisions, even where a Member State had sought permission for such a derogation and the Commission had unreasonably failed to respond to its request.[55]

(iii) *Direct Effect: Time Limits for Implementation*

The general principle is that the direct effect of a directive operates from the deadline specified for implementation of the directive.[56] The result of *Van Duyn, Ratti,* and subsequent case law is that although Article 288 does not declare directives to be directly applicable, so that they do not automatically become part of national law upon adoption, they may produce 'similar effects' to regulations after the time limit for their implementation has expired and the state has not properly implemented them.

The ECJ has moreover made it clear that directives may have an impact even before the implementation period has passed. Thus in *Inter-Environnement Wallonie* it held that although states are not obliged to implement a directive before the period for its transposition has expired, they must, during that period, *refrain* from adopting any measures liable to compromise seriously the result prescribed by the directive.[57] This obligation applies to all state entities, including national courts, which must refrain before the implementation period has passed from interpreting national law so as to prejudice the attainment of the objectives of the directive.[58] Moreover in *Mangold*,[59] discussed below, the ECJ told the national court that it must '*set aside* any provision of national law which may conflict with Community law, even where the period prescribed for transposition of that directive has not yet expired'.[60]

The direct effect of directives was also bolstered by *Marks & Spencer*, in which the ECJ declared that even after a Member State implemented a directive correctly into national law, an individual could continue to rely directly on the provisions of the directive against the state so long as it was not being properly *applied* in practice.[61]

(B) THE VERTICAL/HORIZONTAL DISTINCTION

The ECJ had thus far expanded direct effect. In *Marshall* it however held that the direct effect of a directive could be pleaded against the state, but not against an individual.[62]

[55] Case C–319/97 *Kortas* [1999] ECR I–3143. The ECJ held that an action against the Commission for breach of its obligations under Art 265 TFEU was the appropriate remedy.

[56] Case 8/81 *Becker v Finanzamt Münster-Innenstadt* [1982] ECR 53; Case C–316/93 *Vaneetveld v Le Foyer SA* [1994] ECR I–763, [18]–[19]; Case C–156/91 *Hansa Fleisch* (n 20) [20]; Case C–141/00 *Ambulanter Pflegedienst Kügler GmbH v Finanzamt für Körperschaften I in Berlin* [2002] ECR I–6833, [52]–[60]; Case C–246/06 *Navarro v Fondo de Garantía Salarial (Fogasa)* [2008] ECR I–105, [25]–[30]; Case C–138/08 *Hochtief AG v Közbeszerzések Tanácsa Közbeszerzési Döntőbizottság* [2009] ECR I–9889, [24]–[30].

[57] Case C–129/96 *Inter-Environnement Wallonie ASBL v Région Wallone* [1997] ECR I–7411; Cases C–378–380/07 *Kiriaki Angelidaki and Others v Organismos Nomarchiakis Autodioikisis Rethymnis* [2009] ECR I–3071, [206].

[58] Cases C–261 and 299/07 *VTB-VAB NV v Total Belgium NV* [2009] ECR I–2949, [38]–[39].

[59] Case C–144/04 *Mangold v Helm* [2005] ECR I–9981, [76]–[78].

[60] Ibid [78].

[61] Case C–62/00 *Marks & Spencer plc v Commissioners of Customs & Excise* [2002] ECR I–6325, [22]–[28]; noted by M Ruffert, (2003) 40 CMLRev 729; S Drake, (2003) 28 ELRev 418.

[62] Moreover, a dir, even if pleaded by an individual only against the state, cannot of itself result in the imposition of a civil obligation on another individual: Case C–201/02 *Wells v Secretary of State for Transport, Local Government and the Regions* [2004] ECR I–723, [57]–[58].

Case 152/84 **Marshall v Southampton and South-West Hampshire Area Health Authority (Teaching)**
[1986] ECR 723

[Note Lisbon Treaty renumbering: Arts 189 and 191 are now Arts 288 and 297 TFEU]

Helen Marshall was dismissed after 14 years' employment by the respondent health authority on the ground that she had passed 60, and the Authority's policy required female employees to retire at 60 and male employees at 65. National legislation imposed no obligation on women to retire at 60, but neither did it prohibit employers from discriminating on grounds of sex in retirement matters. Marshall argued however that her dismissal violated the 1976 Equal Treatment Directive, and the national court asked whether she could rely on the Directive against the Health Authority. Advocate General Slynn suggested that to give 'horizontal effect' to directives by allowing them to impose obligations directly on an individual would 'totally blur the distinction between directives and regulations' established by the Treaty.[63]

THE ECJ

48. With regard to the argument that a directive may not be relied upon against an individual, it must be emphasized that according to Article 189 of the EEC Treaty, the binding nature of a directive, which constitutes the basis for the possibility of relying on the directive before a national court, exists only in relation to 'each Member State to which it is addressed'. It follows that a directive may not of itself impose obligations on an individual and that a provision of a directive may not be relied upon as such against such a person.

A number of rationales have been suggested as to why directives should only have vertical and not horizontal direct effect.

The reason given by the ECJ in *Marshall* was *textual*, based on the wording of Article 288. There are however two difficulties with this argument.

On the one hand, the ECJ's reasoning is debatable in textual terms. The wording of Article 288 merely signifies that a Member State is bound by a directive only if mentioned therein as being bound, by way of contrast to regulations that bind all Member States. It says nothing one way or the other as to whether, if a particular Member State is bound by a directive, the directive might also impose an obligation on a private individual.

On the other hand, the Court's textual fidelity in this context contrasts with its approach to the direct effectiveness of certain Treaty Articles which, like directives, are also explicitly addressed only to the Member State. Article 157 TFEU, for example, is addressed only to the Member States, providing that states are to ensure the application of the principle of equal pay for male and female workers. In the first *Defrenne* case, however, the ECJ dismissed the argument that what is now Article 157 could be relied upon only as against the state. It held that since 'Article 119 is mandatory in nature, the prohibition on discrimination between men and women applies not only to the action of public authorities, but also extends to all agreements which are intended to regulate paid labour collectively, as well as to contracts between individuals'.[64] The same reasoning has been applied to other Treaty Articles.[65]

A *rule of law* argument has also been used against the horizontal direct effect of directives. Thus Advocate General Slynn in *Marshall* was concerned about the fact that directives were not required,

[63] [1986] ECR 723, 734.
[64] Case 43/75 *Defrenne* (n 22).
[65] See, eg, Case C–281/93 *Angonese v Cassa di Risparmio di Bologna* [2000] ECR I–4134, [32]–[36]; Case C–438/05 *Viking Line*, Section 3(c) above.

until after the Maastricht Treaty, to be notified or published in the Official Journal.[66] The great majority of directives were however published and the requirement of publication is now contained in Article 297 TFEU. Moreover, all directives contain a time limit for their implementation, thus reducing the rule-of-law concern.

A third argument is that *horizontal direct of directives would erode the distinction between regulations and directives*. This is said to be because directives would thereby have legal impact even though they had not been implemented in the Member States, thereby eroding the distinction between regulations, which are directly applicable, and directives, which are not. The argument is however problematic. Insofar as it has force it is equally true of vertical direct effect of directives. To accord direct effect to directives does not however in reality erode the distinction between regulations and directives. The key distinction between the two instruments is that Member States are intended to have choice as to form and methods of implementation for directives. Giving direct effect to directives, whether vertical or horizontal, is not intended to undermine this. It is not intended to take away this choice. It is merely expressive of the fundamental proposition that if such implementing measures have not been enacted within the required time then the binding ends stipulated in the directive can still be enforced, provided that they are sufficiently certain, precise, etc.

The final argument adduced against horizontal direct effect is *legal certainty*. This was the rationale given in *Wells*,[67] the relevant paragraph of which has been cited in subsequent cases, albeit without specifically mentioning legal certainty.[68] It is however unclear whether legal certainty is the policy rationale for the textual limit considered above, or whether it is an independent normative reason for denying horizontal direct effect. Suffice it to say the following concerning this argument. First, if directives were to be capable of horizontal direct effect this would only apply if the relevant provisions really were sufficiently clear, precise, and unconditional. Secondly, the meaning of legal certainty in this context is unclear, since the ECJ has provided no elaboration. There is however no plausible meaning of that term which explains the rejection of horizontal direct effect of directives.[69] Thirdly, there are by way of contrast very real problems of legal certainty with the doctrine of indirect effect and incidental effect, which are the major qualifications to the absence of horizontal direct effect of directives.[70]

(c) EXPANDING VERTICAL DIRECT EFFECT: A BROAD CONCEPT OF THE STATE

The 'doctrinal rule' that directives cannot have horizontal direct effect leads to discrimination between the private and public sectors.[71] In *Marshall* the Court concluded that the complainant could nevertheless rely on the provisions of this directive as against the Health Authority, since it could be regarded as an organ of the state.[72]

> 49. In that respect it must be pointed out that where a person involved in legal proceedings is able to rely on a directive as against the State he may do so regardless of the capacity in which the latter is acting, whether employer or public authority. In either case it is necessary to prevent the State from taking advantage of its own failure to comply with Community law. . . .

51. The argument submitted by the United Kingdom that the possibility of relying on provisions of the directive against the respondent *qua* organ of the State would give rise to an arbitrary and unfair distinction between the rights of State employees and those of private employees does not justify any other conclusion. Such a distinction may easily be avoided if the Member State concerned has correctly implemented the directive into national law.[73]

The ECJ has nonetheless continued to insist that directives should only have vertical direct effect, despite widespread academic criticism and numerous opinions given by Advocates General in favour of horizontal direct effect. The ruling in *Marshall* was confirmed ten years later in the *Dori* case.[74]

The vertical/horizontal distinction requires the ECJ to delineate what is to be regarded as the 'state' for these purposes.[75] The ECJ has taken a broad view of the 'state' against which directives could be enforced. The *Foster* case remains the primary ruling.

Case C–188/89 **Foster and Others v British Gas plc** [1990] ECR I–3313

The plaintiffs were employed by British Gas, whose policy it was to require women to retire at 60 and men at 65. British Gas was at the time a nationalized industry with responsibility for and a monopoly of the gas-supply system in Great Britain. The plaintiffs sought to rely on the provisions of the 1976 Equal Treatment Directive and the House of Lords asked the ECJ whether British Gas was a body of the kind against which the provisions of the Directive could be invoked.

THE ECJ

18. On the basis of those considerations, the Court has held in a series of cases that unconditional and sufficiently precise provisions of a directive could be relied on against organizations or bodies which were subject to the authority or control of the State or had special powers beyond those which result from the normal rules applicable between individuals.

19. The Court has accordingly held that provisions of a directive could be relied on against tax authorities (the judgments in Case 8/81 *Becker* [1982] ECR 53, Case 221/88 *ECSC* v. *Busseni* [1990] ECR I–495), local or regional authorities (judgment in Case 103/88 *Costanzo* [1989] ECR 1839), constitutionally independent authorities responsible for the maintenance of public order and safety (judgment in Case 222/84 *Johnston* v. *Chief Constable of the RUC* [1986] ECR 1651), and public authorities providing public health services (judgment in Case 152/84 *Marshall* [1986] ECR 723).

20. It follows from the foregoing that a body, whatever its legal form, which has been made responsible, pursuant to a measure adopted by the State, for providing a public service under the control of the State and has for that purpose special powers beyond those which result from the normal rules applicable in relations between individuals, is included in any event among the bodies against which the provisions of a directive capable of having direct effect may be relied upon.

It is evident from paragraph 20 that the Court considered a company in the position of British Gas to be an organ of the state. However, it is not entirely clear what kind of control the state must have over a body for it to be part of the state. *Foster* provides no authoritative definition, but merely indicates

[73] Case 152/84 *Marshall* (n 66) .

[75] D Curtin, 'The Province of Government: Delimiting the Direct Effect of Directives in the Common Law Context' (1990) 15 ELRev 195; E Szyszczak, 'Foster v British Gas' (1990) 27 CMLRev 859.

that a body which has been made responsible for providing a public service under the control of the state is *included* within the EU definition of a public body. Subsequent case law initially left it in the hands of national courts to apply the loose criteria articulated in *Foster*,[76] but the ECJ in other cases ruled that a particular body clearly satisfied those criteria for the purposes of invoking a directive against it.[77]

A broad range of bodies has been included in the state for these purposes, including local authorities, regions, nationalized industries, privatized undertakings, and universities. It is moreover clear that all such authorities have an obligation within the limits of their power to apply the provisions of the directive, and refrain from applying provisions of national law which conflict with them,[78] something which has been referred to as 'administrative direct effect'.[79]

The broad interpretation of what constitutes an organ of the state seems at odds with the refusal to extend their direct enforceability to relations between non-state entities and individuals, more especially because state organs and domestic administrations that play no part in the formal implementation of EU legislation are bound to apply the provisions of directives in practice.

The reality is that the *Foster* test embodies an unusual inverse principle of state or vicarious responsibility, whereby a body that might be regarded in some way as connected with the state is held responsible for a failing of the state itself, even though it had no control over the relevant event. The fact that the principal, the state *stricto sensu*, has accorded, for example, a health authority certain special powers and exercises some control over the latter is held to warrant the application of the directive against the latter as an independent legal entity. This is problematic because: the degree of special power/state control may vary considerably; the 'agent' for these purposes often has no power over implementation of the directive; and the connection between the existence of the special power/state control and the institution's responsibility under the directive is far from self-evident.

Advocate General Jacobs captured this difficulty, noting that the very broad interpretation of the state meant that directives could be enforced even against commercial enterprises where there was some element of state participation or control, 'notwithstanding that those enterprises have no responsibility for the default of the Member States, and notwithstanding that they might be in direct competition with private sector undertakings against which the same directives are not enforceable'.[80] The ECJ's thesis is in effect that the 'price' to be paid by, for example, the nationalized industry for whatever powers it has been given by the Member State is that the relevant industry should be subject to whatever duties flow from a directive, even though there is no necessary connection between those powers and anything to do with EU law, and even though the relevant undertaking has no more control or power over the implementation of the directive than any private individual.

(D) VERTICAL DIRECT EFFECT: TRIANGULAR SITUATIONS

The ECJ has thus given an expansive interpretation to the concept of the state for the purposes of vertical direct effect. It has also made it clear that vertical direct effect is not precluded even if the application of the directive against the Member State will be certain to lead to adverse consequences for the individual. This is known as the triangular situation.[81]

Case C–201/02 **The Queen, on the application of Delena Wells v Secretary of State for Transport, Local Government and the Regions** [2004] ECR I–723

The case concerned Directive 85/337. It required assessment of the effects of public and private projects on the environment before planning consent was given. Planning permision was given for mining operations without such an assessment. Wells sought the revocation of the planning consent on the ground that the directive had not been complied with.

THE ECJ

55. According to the United Kingdom Government, acceptance that an individual is entitled to invoke Article 2(1) of Directive 85/337, read in conjunction with Articles 1(2) and 4(2) thereof, would amount to 'inverse direct effect' directly obliging the Member State concerned, at the request of an individual, such as Mrs Wells, to deprive another individual or individuals, such as the owners of Conygar Quarry, of their rights.

56. As to that submission, the principle of legal certainty prevents directives from creating obligations for individuals. For them, the provisions of a directive can only create rights (see Case 152/84 Marshall [1986] ECR 723, paragraph 48). Consequently, an individual may not rely on a directive against a Member State where it is a matter of a State obligation directly linked to the performance of another obligation falling, pursuant to that directive, on a third party (see, to this effect, Case C–221/88 Busseni [1990] ECR I–495, paragraphs 23 to 26, and Case C–97/96 Daihatsu Deutschland [1997] ECR I–6843, paragraphs 24 and 26).

57. On the other hand, mere adverse repercussions on the rights of third parties, even if the repercussions are certain, do not justify preventing an individual from invoking the provisions of a directive against the Member State concerned (see to this effect, in particular, Case 103/88 Fratelli Costanzo [1989] ECR 1839, paragraphs 28 to 33, WWF and Others, cited above, paragraphs 69 and 71, Case C–194/94 CIA Security International [1996] ECR I–2201, paragraphs 40 to 55, Case C–201/94 Smith & Nephew and Primecrown [1996] ECR I–5819, paragraphs 33 to 39, and Case C–443/98 Unilever [2000] ECR I–7535, paragraphs 45 to 52).

58. In the main proceedings, the obligation on the Member State concerned to ensure that the competent authorities carry out an assessment of the environmental effects of the working of the quarry is not directly linked to the performance of any obligation which would fall, pursuant to Directive 85/337, on the quarry owners. The fact that mining operations must be halted to await the results of the assessment is admittedly the consequence of the belated performance of that State's obligations. Such a consequence cannot, however, as the United Kingdom claims, be described as 'inverse direct effect' of the provisions of that directive in relation to the quarry owners.

[81] See also Cases C–152–154/07 *Arcor* (n 47).

6 DIRECTIVES: LEGAL EFFECTS

The ECJ has developed a number of doctrinal devices that have reduced the impact of there not being horizontal direct effect of directives and rendered this area of the law increasingly complex. It has done so by recognizing legal effects of directives even though they do not have horizontal direct effect. It is to these strategies that we now turn.

(A) 'INDIRECT EFFECT': PRINCIPLE OF HARMONIOUS INTERPRETATION

(i) *Obligation to Interpret National Law in Conformity with Directives*

The most important way in which the ECJ encouraged the effectiveness of directives, despite denying the possibility of direct horizontal enforcement, was by developing a principle of harmonious interpretation which requires national law to be interpreted 'in the light of' directives. *Von Colson* is a leading authority.

Case 14/83 **Von Colson and Kamann v Land Nordrhein-Westfalen**
[1984] ECR 1891

[Note Lisbon Treaty renumbering: Art 189 is now Art 288 TFEU]

The ECJ ruled that the Equal Treatment Directive on which the plaintiffs relied in their claim of unlawful sex discrimination was not sufficiently precise to guarantee them a specific remedy of appointment to a post, but it went on to rule on what effect the directive's aims might nonetheless have on the interpretation of national law.

THE ECJ

26. However, the Member States' obligation arising from a directive to achieve the result envisaged by the directive and their duty under Article 5 of the Treaty to take all appropriate measures, whether general or particular, to ensure the fulfillment of that obligation, is binding on all the authorities of Member States including, for matters within their jurisdiction, the courts. It follows that, in applying the national law and in particular the provisions of a national law specifically introduced in order to implement Directive No 76/207, national courts are required to interpret their national law in the light of the wording and the purpose of the Directive in order to achieve the result referred to in the third paragraph of Article 189.

...

28. ...It is for the national court to interpret and apply the legislation adopted for the implementation of the directive in conformity with the requirements of Community law, in so far as it is given discretion to do so under national law.

The Court in *Von Colson* expressly identified the national courts as organs of the state responsible for fulfillment of Community obligations, and encouraged the German court to supplement the domestic legislation, which did not on its face seem to provide an adequate remedy, by reading it in conformity with the Directive's requirement to provide a real and effective remedy. The case also makes clear that the doctrine of harmonious interpretation, or 'indirect effect', does not

require the provisions of a directive to satisfy the specific justiciability criteria (clarity, precision, unconditionality) for direct effect.[82]

The principle has been strengthened over time, with the Court declaring it to be 'inherent in the system of the Treaty', derived from the obligation in Article 4(3) TFEU, and an aspect of the requirement of full effectiveness of EC law,[83] which applies not only to national courts, but to all competent authorities called upon to interpret national law.[84]

The date at which the interpretive obligation arose was unclear until relatively recently.[85] The general principle is, as seen above, that vertical direct effect of a directive becomes operative when the time limit for implementation has expired,[86] subject to the duty to refrain in the period prior to expiration of the time limit from taking measures liable seriously to compromise the result prescribed by the directive.[87] A number of Advocates General had argued that the obligation of harmonious interpretation should apply before the expiry of the time limit for implementation.[88] However, in *Adeneler*, the ECJ finally addressed the point directly and ruled that, where a directive 'is transposed belatedly, the general obligation owed by national courts to interpret domestic law in conformity with the directive exists only once the period for its transposition has expired'.[89] However, the Court also held that the obligation on the state to refrain, even before expiry of the time limit, from measures liable to compromise the result sought by the directive meant that from the date when the directive entered into force, national courts must refrain as far as possible from interpreting domestic law in a manner which might seriously compromise, after the period for transposition had expired, attainment of the objective pursued by that directive.[90]

(ii) *Vertical and Horizontal Application of the Obligation*

Von Colson concerned a directive which had been inadequately implemented,[91] and the case was brought against a state employer. Later cases however established that the obligation requires a national court to interpret national law in the light of an inadequately implemented or a non-implemented directive even in a case against an individual, thus side-stepping in a certain way the prohibition on horizontal direct effect.

The *Marleasing* case concerned a 'horizontal' situation involving two private parties before a domestic court, where the interpretation of national law in the light of an unimplemented directive would not impose penal liability, but was likely to affect its legal position in a disadvantageous way.[92] This judgment confirmed that an unimplemented directive could be relied on to influence the interpretation of national law in a case between individuals.

Case C–106/89 **Marleasing SA v La Comercial Internacionale de Alimentacion SA** [1990] ECR I–4135

[Note Lisbon Treaty renumbering: Arts 5 and 189 EC are now Arts 4(3) TEU and 288 TFEU]

The plaintiff company brought proceedings against La Comercial to have the defendant company's articles of association declared void as the company was created for the sole purpose of defrauding creditors. The provisions of the relevant Council Directive did not include this 'lack of cause' as a ground for the nullity of a company, whereas the Spanish Civil Code provided for the ineffectiveness of contracts for lack of cause. The Spanish court referred the case to the ECJ, asking whether the Council Directive could have direct effect between individuals so as to preclude the declaration of nullity of a company on grounds other than those set out in the Directive. Advocate General Van Gerven argued that the obligation to interpret a provision of national law in conformity with a directive applied whenever the provision in question was to any extent open to interpretation in accordance with methods recognized by national law.

THE ECJ

7. However, it is apparent from the documents before the Court that the national court seeks in substance to ascertain whether a national court hearing a case which falls within the scope of Directive 68/151 is required to interpret its national law in the light of the wording and the purpose of that directive in order to preclude a declaration of nullity of a public limited company on a ground other than those listed in Article 11 of the directive.

8. In order to reply to that question, it should be observed that, as the Court pointed out in its judgment in Case 14/83 *Von Colson and Kamann* v. *Land Nordrhein-Westfalen* [1984] ECR 1891, paragraph 26, the Member States' obligation arising from a directive to achieve the result envisaged by the directive and their duty under Article 5 of the Treaty to take all appropriate measures, whether general or particular, to ensure the fulfilment of that obligation, is binding on all the authorities of Member States including, for matters within their jurisdiction, the courts. It follows that, in applying national law, whether the provisions in question were adopted before or after the directive, the national court called upon to interpret it is required to do so, as far as possible, in the light of the wording and the purpose of the directive in order to achieve the result pursued by the latter and thereby comply with the third paragraph of Article 189 of the Treaty.

(iii) *The Scope of the Interpretive Obligation*

There are three points to note about the scope of the interpretive obligation. They are related but distinct.

First, it is clear from *Marleasing* that the obligation of harmonious interpretation applies even where the national law *predates* the directive and has no specific connection with it. In *Marleasing* there was no domestic implementing legislation which could be interpreted in the light of the Directive, but only domestic law which pre-dated the Directive and was not intended to implement it.

Secondly, it is clear from cases such as *Pfeiffer* that the interpretive obligation applies not only to national law that implements the directive, but to the national legal system as a whole.[93]

[93] See also Case C–12/08 *Mono Car Styling SA, in liquidation v Dervis Odemis* [2009] ECR I–6653, [64]; Case C–98/09 *Sorge* (n 82) [51]; Case C–239/09 *Seydaland Vereinigte Agrarbetriebe GmbH & Co KG v BVVG Bodenverwertungs- und -verwaltungs GmbH*, 16 Dec 2010, [50].

Cases C–397–403/01 **Pfeiffer and others v Deutsches Rotes Kreuz, Kreisverband Waldshut eV** [2004] ECR I-8835

The case concerned the interpretation of directives on health and safety at work and working time. The claimants were workers employed by the defendant, the German Red Cross. They argued that they had been required to work in excess of 48 hours per week, in violation of the Directive. The ECJ reiterated that directives cannot have horizontal direct effect, but held that the interpretive obligation from *Von Colson* was applicable.

THE ECJ

115. Although the principle that national law must be interpreted in conformity with Community law concerns chiefly domestic provisions enacted in order to implement the directive in question, it does not entail an interpretation merely of those provisions but requires the national court to consider national law as a whole in order to assess to what extent it may be applied so as not to produce a result contrary to that sought by the directive (see, to that effect, Carbonari, paragraphs 49 and 50).

116. In that context, if the application of interpretative methods recognised by national law enables, in certain circumstances, a provision of domestic law to be construed in such a way as to avoid conflict with another rule of domestic law or the scope of that provision to be restricted to that end by applying it only in so far as it is compatible with the rule concerned, the national court is bound to use those methods in order to achieve the result sought by the directive.

. . .

118. In this instance, the principle of interpretation in conformity with Community law thus requires the referring court to do whatever lies within its jurisdiction, having regard to the whole body of rules of national law, to ensure that Directive 93/104 is fully effective, in order to prevent the maximum weekly working time laid down in Article 6(2) of the directive from being exceeded (see, to that effect, Marleasing , paragraphs 7 and 13).

Thirdly, the interpretive obligation is 'strong', but does not require an interpretation of national law that it cannot bear. There is continuing debate as to how strongly national courts are encouraged to interpret otherwise clear provisions of national law so as to comply with the directive.[94] The Treaty obligation on national courts to take all measures possible to comply with EU law clearly constrains the interpretive discretion national courts would otherwise have under national law. The ECJ has moreover regularly emphasized the strength of the interpretive obligation. Thus in *Pfeiffer* the ECJ ruled that 'the principle of interpretation in conformity with Community law thus requires the referring court to do whatever lies within its jurisdiction, having regard to the whole body of rules of national law' to ensure that a directive is effective.[95]

The ECJ has not retreated from its strong encouragement to interpret domestic law in conformity with directives, but has generally left it to national courts to decide whether an interpretation in conformity with a directive was possible, or whether it would result in a *contra legem* reading. In *Wagner-Miret*, the Court accepted that the Spanish legislation in question could not be interpreted

[94] Cases 262/88 *Barber v Guardian Royal Exchange* [1990] ECR 1889, 1937, Van Gerven AG; Cases C–63–64/91 *Jackson v Chief Adjudication Officer* [1992] ECR I–4737, [29], Van Gerven AG; Case C–271/91 *Marshall (No 2)* [1993] ECR I–4367, [10], Van Gerven AG.

[95] Cases C–397–403/01 *Pfeiffer* (n 68) [118]; Case C–268/06 *Impact* (n 21) [100]–[101]; Case C–406/08 *Uniplex (UK) Ltd v NHS Business Services Authority*, 28 Jan 2010, [45]–[48]; in *Marleasing*, despite declaring that national courts must read national law in conformity with a relevant dir only 'in so far as possible', the ECJ held that the Spanish court was *precluded* from interpreting national law in a way which did not comply with the provisions of the Dir.

in such a way as to give effect to the result sought by the applicants,[96] and the ECJ has accepted in other cases the limits of interpretation articulated by the national court or apparent in the terms of the legislation.[97] However, by way of contrast, on occasion, as in *Pupino*, even though the ECJ deferred to the ultimate assessment of the national court, the judgment expressly suggested that an interpretation in conformity with the directive or framework decision seemed possible.[98]

(iv) *The Results of the Interpretive Obligation: Criminal Liability*

The obligation of harmonious interpretation cannot result in the imposition or aggravation of criminal liability on an individual, but it may result in other adverse repercussions for the individual. This flows from the principle of non-retroactivity of penal liability articulated by the ECJ in *Kolpinghuis Nijmegen*.[99] In this case, the Dutch prosecution authorities sought to use the provisions of an unimplemented directive against the defendant. The ECJ, after reiterating the principle of interpretation in paragraph 26 of *Von Colson*, declared that:

> [T]he obligation on the national court to refer to the content of the directive when interpreting the relevant rules of its national law is limited by the general principles of law which form part of Community law and in particular the principles of legal certainty and non-retroactivity . . . a directive cannot, of itself and independently of a law adopted for its implementation, have the effect of determining or aggravating the liability in criminal law of persons who act in contravention of the provisions of that directive.[100]

(v) *The Results of the Interpretive Obligation: Non-Criminal Liability*

There has been more debate as to the relationship between the duty of harmonious interpretation and non-criminal liability, in particular the implications for individuals. Consider the ruling in the *Arcaro* case.[101] The ECJ, having reiterated the obligation of harmonious interpretation, ruled:

> However, that obligation of the national court to refer to the content of the directive when interpreting the relevant rules of its own national law reaches a limit where such an interpretation leads to the imposition on an individual of an obligation laid down by a directive which has not been transposed, or, more especially, where it has the effect of determining or aggravating, on the basis of the Directive and in the absence of a law enacted for its implementation, the liability in criminal law of persons who act in contravention of that directive's provisions (see *Kolpinghuis Nijmegen*, cited above).[102]

[102] Ibid [42]. See also Case C–105/03 *Pupino* (n 98) [45]–[47].

The case was concerned with criminal liability. The Court seemed however to suggest a narrowing of the principle of interpretation by reference to its impact on an individual, even if that impact did not amount to criminal liability. The *Arcaro* ruling suggested that where an interpretation of national law in the light of a directive amounted to 'the imposition on an individual of an obligation laid down in the directive',[103] it went too far and was neither permitted nor required by EU law. This was reiterated more recently in *Kofoed*,[104] a case concerned with tax, not criminal law. This implies that a distinction has to be made between the 'imposition of an obligation' on an individual, which is not permitted, and the creation of other kinds of legal disadvantage or detriment for that party falling short of a legal obligation, which is permitted.

However in the *Centrosteel* case, Advocate General Jacobs suggested that the ruling in *Arcaro* should be read in the context of the criminal proceedings in which the case had arisen.[105]

> In summary, I am of the opinion that the Court's case law establishes two rules: (1) a directive cannot *of itself* impose obligations on individuals in the absence of proper implementation in national law; (2) the national courts must nevertheless interpret national law, as far as possible, in the light of the wording and purpose of relevant directives. While that process of interpretation cannot, of itself and independently of a national law implementing the directive, have the effect of determining or aggravating criminal liability, it may well lead to the imposition upon an individual of civil liability or a civil obligation which would not otherwise have existed.

Advocate General Jacobs in *Centrosteel* is surely right in saying that the interpretive obligation may lead to the imposition on an individual of civil liability or a civil obligation which would not otherwise have existed, and this was also the view of Advocate General Kokott.[106] This will indeed be the normal outcome of the interpretive obligation. The nature of the civil liability or civil obligation will depend upon the case. This should not however blind us to the essential truth of Advocate General Jacobs' observation. If the pre-existing national law is interpreted differently because of the interpretive obligation, then the corollary is that the obligations on the private party will alter, and this may well lead to civil liabilities or obligations that would not have existed hitherto.

We should moreover be wary of becoming 'too academic' in our characterization of these changes, since this will lead to yet further complexity in an area of the law that is already difficult to comprehend for the expert, let alone the private firm. Such wariness is also warranted because it matters little from the perspective of the individual affected by the legal change whether it is characterized as, for example, removing a disability, limiting immunity, or imposing a duty; nor does it matter whether the obligation results directly from the directive, or from a change in national law as interpreted in light of the directive. We should not assume that there are normative differences that justify differential treatment of these situations. The 'correct characterization' will depend on the change to pre-existing national law from reading it with the directive.[107] The essential point from the perspective of the private defendant is that the interpretive obligation will change the outcome of the case, and in that sense lead to the imposition of an obligation that would not otherwise have existed.

[104] Case C–321/05 *Kofoed v Skatteministeriet* [2007] ECR I–5795, [45].

[105] Case C–456/98 *Centrosteel v Adipol* [2000] ECR I–6007, [31]–[35], AG Jacobs.

[106] Case C–321/05 *Kofoed* (n 104) fn 45, AG Kokott. See, however the more cautious Opinion of Colomer AG in Cases C–392 and 422/04 *i-21 Germany GmbH and ISIS Multimedia Net GmbH & Co KG v Bundesrepublik Deutschland* [2006] ECR I–8559, [87]–[91].

[107] Craig (n 69) 362–364.

This can be exemplified by the ECJ's ruling in *Centrosteel*,[108] even though it did not refer to *Arcaro* or to the debate about the limits of the interpretive obligation. Centrosteel, an Italian company, claimed for payment under a commercial agency contract with the defendant Adipol, an Austrian company. The latter argued that the contract was void because of Centrosteel's failure to comply with the Italian legal requirement of compulsory registration of commercial agents. Centrosteel counter-argued that Directive 86/653 as interpreted by the ECJ[109] only required an agency contract to be written, and precluded a law such as the Italian registration requirement.

The ECJ held that the national court must interpret national law in the light of the Directive,[110] with the result that Adipol would be under a legal obligation to pay the amount due under the contract with Centrosteel. If Italian law were not read in the light of the Directive, however, and if the agency contract were rendered void for violation of Italian registration law, Adipol would not be under this obligation. This kind of effect has been referred to as the 'exclusionary effect' of a directive: it prevents conflicting national law from being enforced, but it does not amount to a 'substitution effect' since it is the commercial contract and not the Directive itself which imposes obligations on the parties. We shall return to the soundness of this distinction later. Suffice it to say for the present that the result of the interpretive obligation was to change the result in the case and to alter the legal obligations of the respective parties to the contract.

(vi) *Summary*

i. The doctrine of indirect effect is in practical terms the most important qualification to the principle that directives do not have horizontal direct effect. It is however problematic for the private defendant in terms of legal certainty, which is paradoxical given that concerns about legal certainty are said to underpin the rule that directives should not have horizontal direct effect. The reality is nonetheless that indirect effect is more problematic in this regard.

ii. This can be seen by reflecting on the following simple paradigm. The Chief Executive Officer, CEO, of a company consults the in-house legal counsel as to what the company should do in the following circumstances. There is an EU directive on equality, which either has not been implemented by the relevant state, or there are doubts whether the implementation is in accordance with the directive. The CEO wishes to know whether the company should follow the relevant national law or the directive. She wishes to do what is legally correct and to avoid litigation with employees.

iii. If directives had horizontal direct effect the task of the in-house legal counsel would be as follows. The lawyer would compare the relevant national law and the directive. Insofar as there were any inconsistencies, he would decide whether the provisions of the directive were sufficiently precise, clear, and unconditional to give rise to direct effect. Assuming that they were, he would then advise the CEO to follow the directive, because the supremacy of EU law meant that inconsistent national law would be trumped by the directive.

iv. The task facing the private defendant under the present law is considerably more difficult for the following reasons. First, he must still identify any possible inconsistencies between national law and the directive. Secondly, this analysis must include all provisions of the directive, even those which are not sufficiently precise, certain, etc, for direct effect. Thirdly, he must then estimate whether a national court would feel able to read national law to be in conformity with the directive. It is unlikely that he could give more than a rough guess in this respect, depending on the nature of

[108] Case C–456/98 *Centrosteel* (n 105).

[109] Case C–215/97 *Bellone v Yokohama* [1998] ECR I–2191.

[110] Case C–456/98 *Centrosteel* (n 105) [19]; see also Cases C–240–244/98 *Océano Grupo* (n 9); J Stuyck, Note (2001) 38 CMLRev 719.

the inconsistencies that exist. The national court has to tread the ever-difficult line of deciding how far it can 'interpret' national law to be in conformity with the directive, without thereby crossing the line between interpretation and judicial re-writing of legislation. The private party will often simply not know the answer to this without resort to litigation. Fourthly, the difficulty of predicting the outcome of such litigation is exacerbated by the fact that the duty of harmonious interpretation demands that national courts consider all national law in deciding whether compatibility with the provisions of the directive can be attained. The potential private defendant will therefore have to try to guess what sources of national law the national court may advert to if and when the case is litigated. Fifthly, there was until recently very real uncertainty as to the date when the duty of harmonious interpretation 'locked on'. Finally, there are still uncertainties as to the extent to which it can lead to the imposition of legal obligations on the private defendant.

(B) INCIDENTAL HORIZONTAL EFFECTS

(i) *The Doctrine*

The second and closely related development which has lessened the impact of the *Marshall/Dori* no-horizontal-direct-effect-of-directives rule is case law which permits the use of unimplemented directives in certain cases between private parties. This development, which is most evident in *CIA Security*[111] and *Unilever Italia*,[112] is complex and confusing. Like the cases concerning indirect effect, it is often difficult to distinguish these cases in convincing conceptual terms from direct horizontal effect.

The following cases suggest that directives can have a limited form of horizontal effect when they do not directly impose legal obligations on individuals. The essence of these cases is that an individual can plead a directive in an action against another individual, and it can affect the outcome of the case even if it does not directly impose obligations on the private defendant. This is the kind of 'exclusionary' effect referred to by Saggio AG in the *Océano* case:[113] the directive is invoked in a case between individuals to preclude the application of a conflicting provision of national law, and the result is that one of the parties to the case is subject to a legal liability or disadvantage to which it would not have been subject had the offending national law been applied.

Case C–194/94 **CIA Security International SA v Signalson SA and Securitel SPRL**
[1996] ECR I–2201

CIA Security brought proceedings against the defendants before the Belgian commercial courts asking for orders requiring them to cease unfair trading practices. CIA argued that the two companies had libelled it by claiming that the alarm system which it marketed had not been approved as required under Belgian legislation. CIA agreed that it had not sought approval but argued that the Belgian legislation was in breach of Article 28 EC and had not been notified to the Commission as required by Directive 83/189 on technical standards and regulations. The national court asked the ECJ whether the Directive was sufficiently clear and precise to be directly effective before the national court, and whether a national court should refuse to apply a national measure which had not been communicated as required by the Directive. The ECJ began by ruling that the national regulation should indeed have been notified under the Directive.

[111] Case C–194/94 *CIA Security International SA v Signalson SA and Securitel SPRL* [1996] ECR I–2201.
[112] Case C–443/98 *Unilever Italia SpA v Central Food SpA* [2000] ECR I–7535.
[113] Case C–244/98 (n 14).

THE ECJ

44. [A]rticles 8 and 9 of Directive 83/189 lay down a precise obligation on Member States to notify draft technical regulations to the Commission before they are adopted. Being, accordingly, unconditional and sufficiently precise in their content, those articles may be relied on by individuals before national courts.

45. It remains to examine the legal consequences to be drawn from a breach by Member States of their obligation to notify and, more precisely, whether Directive 83/189 is to be interpreted as meaning that a breach of the obligation to notify, constituting a procedural defect in the adoption of the technical regulations concerned, renders such technical regulations inapplicable so that they may not be enforced against individuals.

The Court ruled that part of the aim of the Directive was to protect the free movement of goods by preventive control,[114] and that it would enhance the effectiveness of that control to provide that a breach of the obligation to notify would render the un-notified domestic rule inapplicable to individuals.[115] The ECJ did not mention *Dori* or *Marshall* and did not advert to the fact that this was a case between private parties. However, although CIA relied on the Directive primarily against application of the state's technical regulation concerning approval of alarm systems, this changed the legal outcome before the national court: the defendant could now be liable for unfair trading, because its argument that CIA had marketed its alarm system in breach of Belgian law fell away, since the Belgian law was contrary to the Directive. Thus, although the Directive did not itself impose a legal obligation on the defendants, it removed the protection of the national technical regulation and exposed them to potential liability under other provisions of national law.

The issue of indirect horizontal reliance on directives in disputes involving private parties is also apparent in other cases.[116] The crucial factor is that one party suffers a legal detriment and the other party gains a legal advantage from the terms of an unimplemented directive.[117] The common factor, shared also by the *Océano*, *Centrosteel,* and *Pfeiffer* cases on indirect effect discussed above, seems to be that the Directive does not *of itself* impose an obligation on another individual, and that the obligation is imposed by some other provision of national or private law. This incidental effect of directives is apparent in *Unilever.*[118]

[114] This factor was used to limit the application of the *CIA Security* ruling in the later case of Case C–226/97 *Lemmens* [2000] ECR I–3711.

[115] Attempts to invoke Dir 83/189 [1983] OJ L109/8 were not however successful in Cases C–425–427/97 *Albers* [1999] ECR I–2947; Case C–37/99 *Donkersteeg* [2000] ECR I–10223; Case C–314/98 *Sneller's Autos v Algemeen Directeur van de Dienst Wegverkeer* [2000] ECR I–8633; Case C–278/99 *Van der Burg* [2001] ECR I–2015. Moreover the obligation imposed on Member States by various dirs to notify the Commission of national rules could not be invoked by individuals to challenge national legislation in Case C–235/95 *AGS Assedic Pas-de-Calais v François Dumon* [1998] ECR I–4531, [32]–[33]; Case 280/87 *Enichem Base v Comune di Cinisello Balsamo* [1989] ECR 2491, [22]–[24].

[116] Case C–441/93 *Panagis Pafitis v Trapeza Kentrikis Ellados AE* [1996] ECR I–1347; Case C–129/94 *Criminal Proceedings Against Rafael Ruiz Bernáldez* [1996] ECR I–1829; Case C–77/97 *Österreichische Unilever GmbH v Smithkline Beecham* [1999] ECR I–431.

[117] For a different view, which sees the cases as being about 'disguised vertical direct effect' in which a private party is precluded from benefiting from the state's substantive breach of an EC dir, see M Dougan, 'The "Disguised" Vertical Direct Effect of Directives' (2000) 59 CLJ 586.

[118] S Weatherill, 'Compulsory Notification of Draft Technical Regulations: the Contribution of Directive 83/189 to the Management of the Internal Market' (1996) 16 YBEL 129; S Weatherill, 'A Case Study in Judicial Activism in the 1990s: the Status before National Courts of Measures Wrongfully Un-notified to the Commission' in D O'Keeffe and A Bavasso (eds), *Judicial Review in EU Law* (Kluwer, 2000) 481.

Case C–443/98 **Unilever Italia SpA v Central Food SpA**
[2000] ECR I–7535

The Directive was invoked to prevent the enforcement of a national regulation which, although properly notified, had been adopted in breach of a standstill clause under Directive 83/189. The contract was for delivery of a quantity of olive oil, and the olive oil delivered by the plaintiff was labelled in a way which complied with EC law, but not with the contested Italian labelling legislation. Thus it was a case where reliance by one party on the terms of the Directive in order to have national law disapplied would result in the imposition of contractual obligations on the defendant, which would not have been imposed had the national law been applied. Jacobs AG, having discussed the *CIA Security* ruling, argued that the offending national legislation should not be rendered unenforceable in private contractual proceedings of this kind. He contended that such unenforceability would give rise to considerable legal uncertainty, and that it would be unjust since it would penalize individuals for the State's failure. He argued further that breach of the Directive's standstill clause was different from a breach of the notification requirement and should not lead to the unenforceability of national regulations. It seems that the AG had doubts about the *CIA Security* ruling itself, and was seeking to narrow the relevance and applicability of the ruling.[119] The ECJ however disagreed and did not address the AG's arguments.[120] Having recalled in paragraphs 40–43 its reasoning in *CIA Security* about the aim of Directive 83/189 and why it should render unenforceable any national regulations adopted in breach thereof, the Court continued:

THE ECJ

45. It is therefore necessary to consider, secondly, whether the inapplicability of technical regulations adopted in breach of Article 9 of Directive 83/189 can be invoked in civil proceedings between private individuals concerning contractual rights and obligations.

46. First, in civil proceedings of that nature, application of technical regulations adopted in breach of Article 9 of Directive 83/189 may have the effect of hindering the use or marketing of a product which does not conform to those regulations.

47. That is the case in the main proceedings, since application of the Italian rules is liable to hinder Unilever in marketing the extra virgin olive oil which it offers for sale.

48. Next, it must be borne in mind that, in *CIA Security,* the finding of inapplicability as a legal consequence of breach of the obligation of notification was made in response to a request for a preliminary ruling arising from proceedings between competing undertakings based on national provisions prohibiting unfair trading.

49. Thus, it follows from the case-law of the Court that the inapplicability of a technical regulation which has not been notified in accordance with Article 8 of Directive 83/189 can be invoked in proceedings between individuals for the reasons set out in paragraphs 40 to 43 of this judgment. The same applies to non-compliance with the obligations laid down by Article 9 of the same directive, and there is no reason, in that connection, to treat disputes between individuals relating to unfair competition, as in the *CIA Security* case, differently from disputes between individuals concerning contractual rights and obligations, as in the main proceedings.

50. Whilst it is true, as observed by the Italian and Danish Governments, that a directive cannot of itself impose obligations on an individual and cannot therefore be relied on as such against an individual (see Case C–91/92 *Faccini Dori* [1994] ECR I–3325, paragraph 20), that case-law does not apply where non-compliance with Article 8 or Article 9 of Directive 83/189, which constitutes a substantial procedural defect, renders a technical regulation adopted in breach of either of those articles inapplicable.

[119] See his subsequent Opinion in Case C–159/00 *Sapod Audic v Eco Emballages SA* [2002] ECR I–5031, [62].
[120] S Weatherill, 'Breach of Directives and Breach of Contract' (2001) 26 ELRev 177.

> 51. In such circumstances, and unlike the case of non-transposition of directives with which the case-law cited by those two Governments is concerned, Directive 83/189 does not in any way define the substantive scope of the legal rule on the basis of which the national court must decide the case before it. It creates neither rights nor obligations for individuals.
>
> 52. In view of all the foregoing considerations, the answer to the question submitted must be that a national court is required, in civil proceedings between individuals concerning contractual rights and obligations, to refuse to apply a national technical regulation which was adopted during a period of postponement of adoption prescribed in Article 9 of Directive 83/189.

The ECJ attempted in two ways to distinguish this case from the prohibited 'horizontal direct effect' cases such as *Dori* and *Marshall*. The first was by emphasizing the particular aim of Directive 83/189 and the rationale outlined in *CIA Security* for declaring national rules which breach this Directive to be unenforceable. Its second and more important argument, for general purposes, was that the Directive itself created no individual rights and imposed no obligations on individuals.

This is the now familiar 'exclusionary effect' argument: that the Directive can be invoked in cases between individuals in order to have national law disapplied, so long as the Directive does not create new law, new rights, or new obligations to be applied. Rather it leaves a 'void' which is filled by other provisions of national law, in this case, of national contract law.

(ii) *Summary*

i. The ECJ has consistently refused to depart from the clear *Marshall/Dori* rulings that a directive cannot be invoked by an individual so as to impose a direct obligation on another individual. Yet cases such as *CIA Security* and *Unilever Italia* demonstrate that directives can be enforced horizontally between the parties, provided that this can be rationalized in terms of an exclusionary, rather than substitutionary effect. This argument must be carefully evaluated. The distinction has been articulated principally in the Opinions of Advocates General and in the academic literature, but it seems to underlie the ECJ's jurisprudence on incidental horizontal effect.

ii. The central idea is that directives can, even in actions between private parties, have an 'exclusionary' impact, excluding inconsistent national law. This is said to flow from the primacy of EU law. The result is then said to be justified on the basis of the national law that subsists in the absence of that part of national law that has been excluded by the directive. This is distinguished from a 'substitution' effect, which connotes the idea that the directive will in itself mandate certain novel legal consequences within the national legal order, where it contains no such provisions. This can, so the argument goes, only occur in actions against the state where the conditions for direct effect have been met. This distinction is however problematic for five reasons.

iii. First, the very determination of whether a case is to be regarded as one of 'exclusion' or 'substitution' can be contestable. The characterization of a case as being one of 'exclusion' and not 'substitution' is dependent on the identification of some 'default rule' of the national legal system that will govern the matter, once the provision that is inconsistent with the directive is excluded. Whether such a default rule exists and its content may be contentious, depending upon the level of abstraction at which the issue is framed.[121] The more broadly the issue is framed the more likely you are to find some national default rule, but the more difficult it becomes to mask the reality that a new rule is being substituted within the national legal system.

[121] See, eg, Cases C–240–244/98 *Océano Grupo* (n 9) [39], AG Saggio who talks of the exclusion of the incompatible rule being filled by application by 'analogy or recourse to general principles of national law if those national provisions comply with the principles on which the directive is based'.

iv. Secondly, the distinction between 'exclusion', combined with the residual application of national law, and 'substitution', entailing the application of 'new' rules derived from the directive, cannot mask the reality that in both instances it is the directive that mandates the outcome and this constitutes a new legal status quo within the national legal system. From the perspective of the private party it matters not whether this is conceptualized in terms of 'modification' of national rules or imposition of 'new' EU rules.

v. Thirdly, the very fact that the directive does not impose obligations directly on the individual, but nonetheless has the legal effects on private law relations exemplified by *Unilever*, is more burdensome for the private firm because it has no control over its own legal destiny, more especially because it may have no knowledge of the breach of the obligation by the state. This was recognized by Advocate General Jacobs, who noted the consequential injustice: failure to notify a technical regulation led to its being unenforceable in private proceedings, and hence an individual lost a case in which the directive was in issue, 'not because of his own failure to comply with an obligation deriving from Community law, but because of a Member State's behaviour'.[122]

vi. Fourthly, the argument is premised on the unspoken assumption that to 'exclude' national law that is inconsistent with a directive is somehow less intrusive than 'substitution' of something new within the national legal order. There is no reason why this has to be so. Legal rules normally contain a core provision that is qualified by other provisions. Contract rules may, for example, be premised on a core idea of freedom to contract, which is then qualified by more specific rules concerning unfair consumer terms, illegality, misrepresentation, and the like. It cannot be assumed that the impact of exclusion of one such rule for inconsistency with a directive, coupled with the application of the remainder of national contract law, will be any less far-reaching for that legal system than the substitution/introduction of a legal concept which that system did not hitherto possess. It may be, but it equally well may not, depending on the nature and importance of the rules respectively excluded or substituted.

vii. Finally, the exclusionary effect of a directive is said to be based on the primacy of EU law. It is however unclear why, if this is the foundational premise, it should not also demand the substitution/introduction of rules from the directive, even where no relevant provisions currently exist within the national legal order. This is precisely what direct effect, including vertical direct effect, of directives coupled with primacy does demand. If primacy really is the driving imperative then it is unclear why it should not also demand substitution even in horizontal cases. The primacy argument is conceptualized in terms of hierarchy: the superiority of EU law is said to demand exclusion. Yet if it is normative hierarchy that drives the argument, it is unclear why it should not also demand substitution, where this is required to effectuate the directive in the national legal order. This is more especially so because it may be fortuitous, depending on the structure of rules within a legal system, whether the case should be characterized as one of exclusion or substitution.

(c) GENERAL PRINCIPLES OF LAW

(i) *Doctrine*

A third qualification to the principle that directives do not have horizontal direct effect is to be found in case law concerned with general principles of law.

[122] Case C–443/98 *Unilever* (n 112) [101], AG Jacobs.

Case C–144/04 **Mangold v Rüdiger Helm**
[2005] ECR I–9981

The case concerned an action between two private parties concerning a fixed term contract under which Mangold was employed by Helm. Directive 2000/78 was concerned with discrimination in relation to employment, on grounds relating, *inter alia*, to age. The Directive was to be implemented by 2003, but Article 18(2) allowed states a further three years in which to do so as far as age and disability were concerned. Germany used this option, which meant that the Directive did not in these respects enter into force until 2006. Mangold argued that a fixed term in his employment contract with Helm was in breach of Directive 2000/78 and that the relevant German law was not consistent with the Directive.

THE ECJ

74. [D]irective 2000/78 does not itself lay down the principle of equal treatment in the field of employment and occupation. Indeed, in accordance with Article 1 thereof, the sole purpose of the directive is 'to lay down a general framework for combating discrimination on the grounds of religion or belief, disability, age or sexual orientation', the source of the actual principle underlying the prohibition of those forms of discrimination being found, as is clear from the third and fourth recitals in the preamble to the directive, in various international instruments and in the constitutional traditions common to the Member States.

75. The principle of non-discrimination on grounds of age must thus be regarded as a general principle of Community law. Where national rules fall within the scope of Community law, which is the case with Paragraph 14(3) of the TzBfG, as amended by the Law of 2002, as being a measure implementing Directive 1999/70 . . . and reference is made to the Court for a preliminary ruling, the Court must provide all the criteria of interpretation needed by the national court to determine whether those rules are compatible with such a principle (Case C–442/00 Rodríguez Caballero [2002] ECR I–11915, paragraphs 30 to 32).

76. Consequently, observance of the general principle of equal treatment, in particular in respect of age, cannot as such be conditional upon the expiry of the period allowed [to] the Member States for the transposition of a directive intended to lay down a general framework for combating discrimination on the grounds of age, in particular so far as the organisation of appropriate legal remedies, the burden of proof, protection against victimisation, social dialogue, affirmative action and other specific measures to implement such a directive are concerned.

77. In those circumstances it is the responsibility of the national court, hearing a dispute involving the principle of non-discrimination in respect of age, to provide, in a case within its jurisdiction, the legal protection which individuals derive from the rules of Community law and to ensure that those rules are fully effective, setting aside any provision of national law which may conflict with that law (see, to that effect, Case 106/77 Simmenthal [1978] ECR 629, paragraph 21, and Case C–347/96 Solred [1998] ECR I–937, paragraph 30).

The case received much critical comment, but the ECJ reaffirmed the ruling in subsequent cases.[123] The ruling was nonetheless questioned by Advocates General, who contended that the ECJ's reasoning was used to circumvent the absence of horizontal direct effect of directives, and that it created problems of legal certainty, more especially because the time limit for the implementation of the directive had not expired.[124]

[123] Case C–555/07 *Seda Kücükdeveci v Swedex GmbH & Co KG*, 19 Jan 2010; Cases C–250 and 268/09 *Georgiev* (n 77).

[124] Case C–321/05 (n 104) [67], AG Kokott; Cases C–55–56/07 *Othmar Michaeler and others v Amt für sozialen Arbeitsschutz and Autonome Provinz Bozen* [2008] ECR I–3135, [14]–[29], AG Ruiz-Jarabo Colomer; Cases C–411/05 *Félix Palacios de la Villa v Cortefiel Servicios SA* [2007] ECR I–8531, [79]–[100], AG Mazák.

The rationale for controversy concerning the Court's ruling is not hard to discern. The action was between private parties and the time limit for implementation of the Directive had not yet expired. The effect of the ruling was to render some of the obligations from the Directive immediately applicable in an action between private parties through the general principle of non-discrimination on grounds of age, the corollary being that the national court should set aside any provision of national law which conflicted with this general principle of EU law.

(ii) *Summary*

i. There are two critiques of this case law that should be distinguished. First, the ECJ repeated the phrase that a directive cannot itself impose obligations on an individual, but that this could be achieved via a general principle of law. If however the Treaty framers truly believed that precise and unconditional obligations from a directive should not be imposed on an individual, it is difficult to explain why they would think it acceptable for an individual to be bound by obligations from a general principle of law, where: the existence of the general principle might be uncertain; where the time limit for implementation of the directive had not expired; where the substance of the obligation was found in the directive; where it was questionable whether the provisions of the directive met the conditions for direct effect; where some other provisions from the directive were read into, or applied though, the general principle; and where it was unclear in advance which provisions of the directive would be read into the general principle. Thus, given the assumption that the Treaty framers did not think that directives should bind private parties, it would have to be shown why they would have been content for this to happen via a general principle of law. No such explanation has been forthcoming from the Union Courts.

ii. Secondly, there are problems of legal certainty. This critique is not premised on the assumption that general principles should never be applicable as between individuals. The extent to which this should be possible has been debated in the literature.[125] The critique is premised on the need for coherence in Treaty interpretation: if the ECJ interprets the Treaty as placing limits on the applicability of legal doctrine, it must then ensure that exceptions to those limits are coherent with the reasons that informed the initial limitations. The principal arguments denying horizontal direct effect to directives are the wording of the Treaty and legal certainty. There are considerable difficulties with both arguments, but they continue to inform the ECJ's case law. *Mangold* creates a further qualification to this denial of horizontal direct effect of directives. It is then incumbent on the ECJ to explain why this coheres with the two rationales posited for the absence of horizontal direct effect of directives. It is, with respect, not sufficient to intone the magic pronoun that a directive does not in *itself* impose obligations on private parties, as if that sufficed to justify such obligations derived from other sources, such as general principles. A coherent explanation would demand the following. Insofar as the denial of horizontal direct effect of directives is premised on problems of legal certainty, there would have to be argument as to why these problems were less apparent when the obligation on the private party was formally derived from a general principle of law. There are formidable obstacles with such a rationalization, since horizontal effect introduced via general principles will often be more problematic in terms of legal certainty. This is because *Mangold* countenanced horizontal application of the general principle before the date for implementation of the directive had passed; the detailed content of the general principle was largely derived from the directive; it was not clear *ex ante* which provisions of the directive would inform the general principle; and there was little, if any, analysis of whether the resulting obligations were sufficiently precise to meet the conditions for direct effect.

[125] See, eg, Editorial, 'The Scope of Application of General Principles of Union Law: An Ever Expanding Union?' (2010) 47 CMLRev 1589; K Lenaerts and J Gutierrez-Fons, 'The Constitutional Allocation of Powers and General Principles of EU Law' (2010) 47 CMLRev 1629.

(D) REGULATIONS CONDITIONAL ON COMPLIANCE WITH DIRECTIVES

(i) *Doctrine*

The inter-relationship of general principles and directives has generated considerable discussion. This is less so for the qualification to *Marshall* considered here, even though it may be of significant practical importance for private defendants. The basic precept is that while directives cannot have horizontal direct effect, they may do so when benefits under a regulation are made conditional on compliance with a directive.

Cases C–37 and 58/06 **Viamex Agrar Handels GmbH and Zuchtvieh-Kontor GmbH (ZVK) v Hauptzollamt Hamburg-Jonas**
[2008] ECR I–69

Payment of export refunds for live animals was dealt with through Regulation 615/98, which however conditioned payment on compliance with Directive 91/628. The Directive laid down rules to protect the welfare of live animals during transit. The German authorities refused to pay the refunds because of non-compliance by the exporter with the 24 hour rest period for animals prescribed by the Directive.

THE ECJ

25. [T]he Finanzgericht Hamburg observes, in essence, that Regulation No 615/98 and Directive 91/628 pursue different objectives and that a regulation cannot thus refer in global terms to a directive which is, moreover, 'regrettably vague'.

26. It must be emphasised in this regard that the simple fact that payment of export refunds for live bovine animals is subject under Regulation No 615/98 to compliance with a number of conditions laid down in legislation pursuing objectives which are specific to that legislation cannot of itself be regarded as a ground of invalidity in relation to that regulation since, as was stated at paragraphs 22 to 24 above, objectives thus pursued are not only perfectly legitimate but also constitute obligations to which, under Community law, all the Member States and institutions are continuously and permanently subject in the formulation and implementation of the common agricultural policy.

27. It is true that, according to settled case-law, a directive cannot of itself impose obligations on an individual (see, inter alia, Case 152/84 Marshall [1986] ECR 723, paragraph 48; Joined Cases C–397/01 to C–403/01 Pfeiffer . . . paragraph 108; Joined Cases C–387/02, C–391/02 and C–403/02 Berlucsoni . . . paragraph 73; and Case C–80/06 Carp . . . paragraph 20).

28. However, it cannot be precluded, in principle, that the provisions of a directive may be applicable by means of an express reference in a regulation to its provisions, provided that general principles of law and, in particular, the principle of legal certainty, are observed.

29. Moreover, the purpose of the general reference made by Regulation No 615/98 to Directive 91/628 is to ensure, for the purposes of the implementation of Article 13(9) of Regulation No 805/68, compliance with the relevant provisions of that directive on the welfare of live animals and, in particular, the protection of animals during transport. That reference, which lays down the conditions for the grant of refunds, cannot therefore be interpreted as covering all the provisions in Directive 91/628 and, in particular, those provisions which have no connection with the principle objective pursued by that directive.

(ii) *Summary*

i. There is much to be said for this substantive decision, since few would argue that exporters should not comply with rules on animal welfare. There are nonetheless two difficulties with the reasoning.

ii. First, the textual reconciliation with *Marshall* is not undertaken by the ECJ. It would presumably be that while a directive cannot 'itself' impose obligations on private parties, it can do so when it is referred to in a regulation, since the latter can have horizontal as well as vertical direct effect, and that the Treaty framers would be content with this. This argument is by no means self-evidently true, more especially when combined with the second difficulty.

iii. Secondly, the decision in *Viamex* is questionable in terms of legal certainty. The ECJ used that concept when considering which provisions of the Directive were made applicable through the Regulation, since, as the referring court noted, the Regulation appeared to make payment of the refunds conditional on compliance with the entirety of the Directive. The ECJ's response in para 29 was that notwithstanding the general reference to the Directive, the only provisions made binding were those relating to the purpose of the Regulation, viz, those provisions of the Directive concerning welfare of live animals in transit. This makes sense in substantive terms. It nonetheless generates considerable legal uncertainty for the private party, who, faced by such a regulation making general reference to a directive, would have to divine which provisions of the directive were 'truly' intended to impose obligations on it.[126] There can moreover be considerable difficulties concerning the 'fit' between the Regulation and the Directive, thereby increasing legal uncertainty for private parties.[127]

(E) STATE LIABILITY IN DAMAGES

An important way for an individual to enforce a directive despite the prohibition on horizontal direct effect is to sue the Member State in damages, pursuant to the *Francovich* ruling, for loss caused by the state's failure to implement a directive.[128] Rather than attempting to enforce the directive against the private party on whom the obligation would be imposed if the directive were properly implemented, the individual can instead bring proceedings for damages against the state. The significance of *Francovich* will be discussed in the next chapter. Suffice it to say that it has provided further incentive for Member States to implement directives properly and on time.

It should however be noted that the private claimant may well have to pursue two legal actions, one against the private party and the other against the Member State. This is because the action against the Member State is premised on the claimant having suffered loss, and the claimant may not be able to prove this unless she has failed to have the obligations from the directive imposed on the private defendant through indirect effect or one of the other mechanisms described above. It follows that the private defendant may still have to go through the calculations discussed above even if the national court decides that it is unable to interpret national law to be in conformity with the directive, and therefore that the only recourse for the claimant is an action against the Member State in damages.

[126] The rule binding the defendant in *Viamex* was contained in point 48(5) of Chap VII of the Annex to Dir 91/628.

[127] Case C–207/06 *Schwaninger Martin Viehhandel—Viehexport v Zollamt Salzburg, Erstattungen* [2008] ECR I–5561.

[128] Cases C–6 and 9/90 *Francovich and Bonifaci v Italy* [1991] ECR I–5357.

7 CONCLUSIONS

i. Provisions of EU law can be invoked by individuals before national courts provided that they are sufficiently clear, precise, and unconditional. This is known as 'direct effect'. Normally, though not always, this means that they are capable of conferring rights on individuals.

ii. The legal effect of directives is complex. They have vertical but not horizontal direct effect. The ECJ has however crafted a growing number of qualifications to the proposition that directives do not have horizontal direct effect. The result is that directives can still have 'legal effect' on private parties in a variety of ways through: the principle of indirect effect/harmonious interpretation; incidental effect; general principles of law; and where a regulation makes reference to a directive.

iii. The resultant body of law is complex and difficult to understand even for the expert, let alone the ordinary private defendant. Law is particular within the social sciences. It is created in an immediate way by legislatures and courts. This comes with responsibilities. Complexity in law is sometimes inevitable, given the nature of the subject matter. Such complexity must however always be justified, and the greater the complexity the better must be the explanation. The complexity is not warranted in this area of the law, nor has it been justified. The law is moreover premised on highly refined and questionable distinctions.

iv. The complex case law is the result of two conflicting impulses. The ECJ is, on the one hand, locked into the proposition that directives cannot have horizontal direct effect, even though the legal rationale for this position is highly contestable. The ECJ is determined, on the other hand, to promote the effectiveness of directives in a variety of complex legal ways regardless of their proper domestic implementation, even though this makes the prohibition on horizontal direct effect look hollow.

v. The consequence is considerable legal uncertainty for private defendants. This is paradoxical given that one of the reasons advanced for not having horizontal direct effect is that it would be problematic in terms of legal certainty. The reality is that when judged in such terms the private defendant fares worse under the present law than if horizontal direct effect existed. Doctrines such as indirect effect and incidental effect lead to greater uncertainty for the private defendant than would be the case if there were horizontal direct effect, added to which there is the uncertainty attendant on having to navigate through a whole range of doctrinal qualifications to *Marshall*.

vi. The only real winners in all this are the lawyers, in the sense that it is virtually impossible for the private defendant to navigate this terrain without legal advice, but what may be good for lawyers does not translate into overall social good.

THE APPLICATION OF EU LAW: REMEDIES IN NATIONAL COURTS

1 CENTRAL ISSUES

i. The ECJ has developed the requirement of effectiveness of EU law as a general legal principle, which includes an obligation on national courts to ensure they give adequate effect to EU law in cases arising before them. The Court increasingly cites the ECHR and the Charter of Fundamental Rights to underscore the principle of effective judicial protection as a fundamental right.

ii. Article 19 TEU (ex Article 220 EC) outlines the role of the ECJ, and contains a new clause added by the Lisbon Treaty which specifies that 'Member States shall provide remedies sufficient to ensure effective legal protection in the fields covered by Union law'. Article 47 of the Charter of Fundamental Rights, which enjoys the same legal status as the EU Treaties, provides that '[e]veryone whose rights and freedoms guaranteed by the law of the Union are violated has the right to an effective remedy before a tribunal in compliance with the conditions laid down in this Article'.

iii. Beyond these broad new provisions, however, EU law does not lay down any general scheme of substantive or procedural law governing remedies for its enforcement. Sectoral legislation addressing remedial issues in various issue areas of EU law exists,[1] and there have been moves towards more ambitious harmonization and coordination projects in civil, commercial, and criminal law.[2]

iv. Early ECJ case law emphasized a principle of national procedural autonomy, whereby EU law would be enforced according to the procedures and rules established by national law, and there was no requirement to create new remedies. This was subject to two further conditions: (i) rights

[1] Three representative examples are in the fields of public procurement, environmental law, and intellectual property. For developments in these fields see Dir 2007/66/EC, [2007] OJ L335/31 revising earlier procurement remedies dirs including Dir 89/665; Dir 2004/95, [2004] OJ L301/42 on environmental liability, together with Dir 2006/21/EC, [2006] OJ L102/15 and Dir 2009/31/EC, [2009] OJ L140/114; Dir 2004/48 on enforcement of intellectual property rights [2004] OJ L195/16.

[2] Art 81 TFEU governs the adoption of measures concerning judicial cooperation in civil matters with a view to eliminating obstacles to the cross-border functioning of civil proceedings. For developments see E Storskrubb, *Civil Procedure and EU Law* (Oxford University Press, 2008). Arts 82–86 TFEU govern the harmonization of criminal law measures: for recent developments see the Stockholm Programme adopted by the European Council, [2010] OJ C115/1. For an overview of discussions to harmonize in the field of contract law see http://ec.europa.eu/internal_market/contractlaw/links_en.htm, and note the Commission's Dec establishing an expert group on a 'Common Frame of Reference' in EU contract law, [2010] OJ L105/109.

deriving from EU law must be subject to the same procedures as rights deriving from national law (equivalence) and (ii) national rules and procedures should not render the exercise of EU rights impossible in practice (practical possibility).

v. The Court later developed a stronger requirement of adequacy and effectiveness, going beyond practical possibility, in the domestic enforcement of EU law, and based this on the principle of sincere cooperation in Article 4(3) TEU (ex Article 10 EC). In some cases the ECJ required national courts to make available a particular type of remedy (eg restitution or interim relief), regardless of whether this would be available under national law.

vi. The most famous judgment in which the ECJ ruled that EU law requires national courts to provide a *specific* form of remedy is *Francovich*, in which the principle of state liability to provide compensation for breaches of EU law was introduced. The scope of this EU 'right to reparation' from the state was subsequently expanded and clarified, and a parallel principle of individual liability for breaches of EU law, at least in the field of competition law, was introduced.

vii. While the idea of national procedural autonomy remains important, the qualifications of equivalence and effectiveness are powerful doctrinal tools directing national courts to undertake a case-by-case appraisal of national rules. National courts are expected to engage in a context-specific proportionality analysis of any restrictive provisions of national law and to dis-apply these whenever necessary to give effect to EU law.

2 THE PRINCIPLES OF NATIONAL PROCEDURAL AUTONOMY, EQUIVALENCE, AND PRACTICAL POSSIBILITY

(A) WHERE NO RELEVANT EU RULES EXIST: NATIONAL LAW DETERMINES THE CONDITIONS FOR ENFORCEMENT OF EU RIGHTS

Early in its case law the ECJ ruled that it was for the national legal system to determine how the interests of a person adversely affected by an infringement of EU law were to be protected.[3]

Case 33/76 **Rewe-Zentralfinanz eG and Rewe-Zentral AG v Landwirtschaftskammer für das Saarland**
[1976] ECR 1989

[Note Lisbon Treaty renumbering: Art 5 EEC is now Art 4(3) TFEU]

The applicant companies applied for a refund, including interest, of charges they had paid in Germany for import inspection costs, which had been imposed in violation of the Treaty. The national time limit for contesting the validity of national administrative measures had passed, and the case was referred to the ECJ to see whether Community law required that they be granted the remedy sought.

[3] Case 6/60 *Humblot v Belgium* [1960] ECR 559; Case 13/68 *Salgoil v Italian Ministry for Foreign Trade* [1973] ECR 453.

THE ECJ[4]

Applying the principle of cooperation laid down in Article 5 of the Treaty, it is the national courts which are entrusted with ensuring the legal protection which citizens derive from the direct effect of the provisions of Community law.

Accordingly, in the absence of Community rules on this subject, it is for the domestic legal system of each Member State to designate the courts having jurisdiction and to determine the procedural conditions governing actions at law intended to ensure the protection of the rights which citizens have from the direct effect of Community law, it being understood that such conditions cannot be less favourable than those relating to similar actions of a domestic nature . . .

. . . In the absence of such measures of harmonisation the right conferred by Community law must be exercised before the national courts in accordance with the conditions laid down by national rules.

The position would be different only if the conditions and time-limits made it impossible in practice to exercise the rights which the national courts are obliged to protect.

This is not the case where reasonable periods of limitation of actions are fixed.

It has been suggested that 'procedural competence'[5] or 'national procedural responsibility' are better terms than 'procedural autonomy' since the cases (and now Article 19(1) TEU) clearly emphasize the responsibility of Member States, where there are no relevant EU rules, for determining the procedural conditions under which EU rights are to be protected.[6]

(B) THE PRINCIPLES OF EQUIVALENCE AND PRACTICAL POSSIBILITY

Two EU requirements were then imposed by the ECJ: first, the principle of *equivalence* or non-discrimination, meaning that the remedies and forms of action available to ensure the observance of national law must be made available in the same way to ensure the observance of EU law;[7] and secondly, the principle of *practical possibility*, meaning that national rules and procedures should not make the exercise of an EU law right impossible in practice.[8]

(C) NO OBLIGATION TO CREATE NEW REMEDIES (UNLESS . . .)

Subject to these two requirements, the early case law provided that procedures and remedies for breach of EU law were primarily a matter for the Member States. In the absence of EU rules to that effect, the states were not required to provide remedies which would not be available under national law. In *Rewe-Handelsgesellschaft Nord v Hauptzollamt Kiel* (the 'butter-buying cruises' case), the ECJ

[4] [1976] ECR 1989, 1997.

[5] This has been suggested by numerous authors including W van Gerven, M Dougan, and C Kakouris. See also J Delicostopoulos, 'Towards European Procedural Primacy in National Legal Systems' (2003) 9 ELJ 599.

[6] Case 45/76 *Comet BV v Produktschap voor Siergewassen* [1976] ECR 2043; Case 179/84 *Bozetti v Invernizzi* [1985] ECR 2301.

[7] For criticism of the conflation of 'procedures' and 'remedies' and the suggestion that the appropriate term should be national *remedial* rather than *procedural* autonomy see C Kilpatrick, 'The Future of Remedies in Europe' in C Kilpatrick, T Novitz, and P Skidmore (eds), *The Future of Remedies in Europe* (Hart, 2000) 1, 4.

[8] In Case 309/85 *Barra v Belgium* [1988] ECR 355 the Court considered that national legislation restricting repayment of a fee which had been charged in breach of EU law would render the exercise of EU rights impossible in practice; see also Case C–62/00 *Marks & Spencer v Commissioners of Customs and Excise* [2002] ECR I–6325.

was asked whether a trader had a right under EU law to require a national court to compel his third party competitor to comply with EU obligations.[9] The Court ruled:

> [I]t must be remarked first of all that, although the Treaty has made it possible in a number of instances for private persons to bring a direct action, where appropriate, before the Court of Justice, it was not intended to create new remedies in the national courts to ensure the observance of Community law other than those already laid down by national law.[10]

We shall see below however that the 'no new remedies' rule has been qualified in various ways. Even in some of its early rulings in one particular branch of case law concerning the repayment of charges levied in breach of EU law, the ECJ effectively insisted that a right to repayment must in principle be available under national law, on the basis that this flowed directly from the substantive provisions of EU law in question.[11] In *San Giorgio* the Court ruled:

> 12. In that connection it must be pointed out in the first place that entitlement to the repayment of charges levied by a member state contrary to the rules of Community law is a consequence of, and an adjunct to, the rights conferred on individuals by the Community provisions prohibiting charges having an effect equivalent to customs duties or, as the case may be, the discriminatory application of internal taxes.[12]

This line of case law concerning unlawfully levied charges can be read as imposing a particular remedy,[13] or perhaps insisting, as a matter of EU law, on the availability of a specific remedy within national legal systems.[14] Nonetheless, even in these repayment cases the Court continued to emphasize the primary role of the national legal system in laying down the conditions governing the grant of such a remedy, so long as they satisfied the 'twin principles' of equivalence and practical possibility. As Advocate General Warner said in *Ferwerda*:[15]

> To that one might object that, if so, there will be a lack of uniformity in the consequences of the application of Community law in the different Member States. The answer to that objection is . . . that this Court cannot create Community law where none exists: that must be left to the Community's legislative organs.

[9] Case 158/80 *Rewe-Handelsgesellschaft Nord mbH v Hauptzollamt Kiel* [1981] ECR 1805.

[10] Ibid [44].

[11] See, eg, Case 199/82 *Amministrazione delle Finanze dello Stato v San Giorgio* [1983] ECR 3595; Cases C–192–218/95 *Comateb v Directeur Général des Douanes et Droits Indirects* [1997] ECR I–165. There is an extensive case law on the recovery of unlawfully levied charges, and in particular on the compatibility with EU law of different versions of the defence of 'passing on': see (n 213), and also Case C–309/06 *Marks & Spencer plc v Commissioners of Customs & Excise* [2008] ECR I–2283; Case C–524/04 *Test Claimants in the Thin Cap Group Litigation* [2007] ECR I–2107; Case C–446/04 *Test Claimants in the FII Group Litigation* [2006] ECR I–11753; Case C–201/05 *Test Claimants in the CFC and Dividend Group Litigation* [2008] ECR I–02875.

[12] Case 199/82 *San Giorgio* (n 11).

[13] M Dougan, 'Cutting your Losses in the Enforcement Deficit: A Community Right to the Recovery of Unlawfully Levied Charges?' (1998) 1 CYELS 233.

[14] The national legal system nonetheless still retains some discretion in deciding on the exact system for repayment of charges: Cases C–10–22/97 *Ministero delle Finanze v IN.CO.GE. '90 Srl* [1998] ECR I–6307, [28], where the ECJ rejected the Commission's argument about the appropriate national remedy.

[15] Case 265/78 *Ferwerda v Produktschap voor Vee en Vlees* [1980] ECR 617, 640. Here the Court accepted that the systematic application of the principle of legal certainty could make it practically impossible for the authorities to recover money granted in breach of an EC reg.

Further, despite some of the more striking later cases which will be discussed below, the ECJ has continued to insist, notably in the important *Unibet* ruling in 2007, that EU law does not, in principle, require the creation of new national remedies.

> 40. Although the EC Treaty has made it possible in a number of instances for private persons to bring a direct action, where appropriate, before the Community Court, it was not intended to create new remedies in the national courts to ensure the observance of Community law other than those already laid down by national law . . .
>
> 41. It would be otherwise only if it were apparent from the overall scheme of the national legal system in question that no legal remedy existed which made it possible to ensure, even indirectly, respect for an individual's rights under Community law.[16]

The ECJ ruled in *Unibet* that there was no need for Swedish law to provide a self-standing action to challenge the compatibility of a national provision with EU law, since there were other domestic legal remedies available which enabled the compatibility question to be raised indirectly and which complied with the twin principles.

3 EMERGENCE OF REQUIREMENTS OF PROPORTIONALITY, ADEQUACY, AND EFFECTIVE JUDICIAL PROTECTION

In addition to cases concerning remedies for a state's violation of EU law (enforcement of EU law by individuals against the state), cases have arisen concerning state responses to the breach of EU law by individuals (enforcement of EU law by the state against individuals or enforcement of EU law by individuals against individuals).

In *Sagulo*, the ECJ ruled that while states were entitled to impose reasonable penalties for infringements of administrative requirements governing EU residence permits by migrant workers, the penalties must not be *disproportionate* to the offence in question and must not constitute an obstacle to the exercise of fundamental EU rights such as freedom of movement.[17] On the other hand, Member States are *required* by EU law—more specifically by Article 4(3) TEU—to take 'all effective measures to sanction conduct which affects the financial interests' of the EU.[18] Moreover the states may impose criminal penalties even where EU legislation provides only for civil sanctions, so long as any penalties imposed satisfy the principle of equivalence and are 'effective, proportionate and dissuasive'.[19]

Other cases concern the adequacy and deterrent effect of national penalties for breaches by private parties of fundamental EU rules.[20] In *Von Colson*, the Court was asked to rule on the compatibility with EU law of national sanctions designed to remedy breaches of rights enjoyed by individuals under the Equal Treatment Directive (at the time Directive 75/207).[21] The plaintiffs had been discriminated

[16] Case C–432/05 *Unibet Ltd v Justitiekanslern* [2007] ECR I–2271. The qualification to the 'no-new-remedies' principle in [41] is clearly significant, and the ECJ in *Unibet* indicated that if an individual were forced to be subject to administrative or criminal proceedings with possible penalties as the sole form of legal remedy for challengng the compatibility of national law with EU law, this would not constitute effective judicial protection.

[17] Case 8/77 *Sagulo, Brenca, and Bakhouche* [1977] ECR 1495, [12]–[13]; Case 77/81 *Zuckerfabrik Franken* [1982] ECR 681.

[18] Case C–186/98 *Nunes and de Matos* [1999] ECR I–4883.

[19] Ibid. Where the penalty is imposed by the state under legislation which of itself is in breach of EU law, the penalty is automatically also invalid, and no question of its proportionality arises: Case C–13/01 *Safalero Srl v Prefetto di Genova* [2003] ECR I–8679.

[20] See also Case 68/88 *Commission v Greece* [1989] ECR 2965; Cases C–378–380/07 *Kiriaki Angelidaki and Others* [2009] ECR I–03071, [159]–[176].

[21] Case 14/83 *Von Colson and Kamann v Land Nordrhein-Westfalen* [1984] ECR 1891.

against on grounds of sex in applying for posts as prison workers, but they were told that they were entitled, by way of remedy, only to 'reliance loss', such as the costs of travel to the interview, and not compensation or appointment to the post. The ECJ ruled:

> 23. Although . . . full implementation of the directive does not require any specific form of sanction for unlawful discrimination, it does entail that that sanction be such as to guarantee real and effective judicial protection.
>
> . . .
>
> 28. It should, however, be pointed out to the national court that although Directive No 76/207/EEC, for the purpose of imposing a sanction for the breach of the prohibition of discrimination, leaves the Member States free to choose between the different solutions suitable for achieving its objective, it nevertheless requires that if a Member State chooses to penalize breaches of that prohibition by the award of compensation, then in order to ensure that it is effective and that it has a deterrent effect, that compensation must in any event be adequate in relation to the damage sustained and must therefore amount to more than purely nominal compensation such as, for example, the reimbursement only of the expenses incurred in connection with the application.

The Court in *Von Colson* derived from the Equal Treatment Directive the more robust requirement of *adequacy and effectiveness* of national remedies, and added these to the established principles of practical possibility, equivalence and non-discrimination,[22] and proportionality of penalties. Later rulings such as *Johnston*,[23] *Heylens*,[24] and *Panayotova*[25] confirmed that this stronger requirement to provide adequate and effective remedies was a general one, extending beyond sex discrimination law. In *Heylens*, a Belgian football trainer's diploma was refused recognition by the French authorities where he worked, and the ECJ, drawing on the right to an effective judicial remedy in Articles 6 and 13 ECHR, ruled:

> [S]ince free access to employment is a fundamental right which the Treaty confers individually on each worker in the Community, the existence of a remedy of a judicial nature against any decision of a national authority refusing the benefit of that right is essential in order to secure for the individual effective protection for his right.[26]

According to the Court, this right to effective judicial review generally requires the giving of reasons for the curtailment of an EU right and the opportunity to defend that right under the best possible conditions.

4 DEVELOPMENT OF THE 'EFFECTIVENESS' REQUIREMENT

(A) A STRONG INITIAL REQUIREMENT

A robust line of cases in the early 1990s highlighted the tension between the emphasis on national procedural autonomy and the requirement that national remedies must secure the effectiveness of EU rights.

[22] For cases in which national procedural rules on security for costs were found to be indirectly discriminatory, not as compared with equivalent EU law claims, but in relation to traders from other Member States, see Case C–43/95 *Data Delecta* [1996] ECR I–4661, [12]; Case C–323/95 *Hayes v Kronenberger* [1996] ECR I–1711, [13].

[23] Case 222/84 *Johnston v Chief Constable of the RUC* [1986] ECR 1651.

[24] Case 222/86 *UNECTEF v Heylens* [1987] ECR 4097.

[25] Case C–327/02 *Panayotova v Minister voor Vreemdelingenzaken en Integratie* [2004] ECR I–11055.

[26] Case 222/86 *Heylens* (n 24) [14].

In *Dekker*, the applicant sought damages before the Dutch courts against an employer who, in breach of the EU Equal Treatment Directive, refused to employ her on grounds of her pregnancy. Citing *Von Colson* on the Directive's requirement of effective judicial protection, the ECJ ruled that to subject a claim for redress to a requirement of 'fault' on the part of the employer, or to a defence of justification or another ground of exemption, would undermine the Directive.[27] The fact that the Directive itself required access to a judicial remedy may account in part for the strength of the ruling, but the judgment marked a further dilution of the principle of national procedural autonomy, especially since the national rule did not discriminate between situations involving EU law and those involving domestic law, and the requirement of fault might not render the exercise of the EU right 'impossible' in practice.

In *Cotter and McDermott* the ECJ ruled that to permit reliance by the national authorities on a domestic law principle against unjust enrichment to deny married women payment of social welfare benefits for dependants which had previously been paid to married men but denied to married women in breach of EU sex discrimination law would allow the authorities to use their own unlawful conduct to undermine the Directive.[28] The desire to prevent the state profiting from its own wrong seems to have played as much a part in the Court's reasoning as the desire not to weaken the effectiveness of the Directive.[29]

In *Emmott*, the applicant sought retrospective payment of a disability benefit for the period in which EU Directive 79/7 on sex discrimination in social security had remained unimplemented in Ireland.[30] She had been told by the government department that no decision could be made in her case pending the ECJ's ruling in *Cotter and McDermott*, but when she finally applied for judicial review of the decisions relating to her benefits the department pleaded that her delay in initiating proceedings constituted a bar to the action. Having set out the principle of national procedural autonomy and the conditions of equivalence and practical possibility, the ECJ ruled that given the 'particular nature of directives', a Member State could not, where an individual sought to rely on the provisions of a directive, invoke against that individual a national time limit for bringing proceedings until the directive was properly implemented.[31]

On the issue of suspension of national time limits pending the proper implementation of a directive, the *Emmott* ruling was subsequently confined largely to the facts of the case, turning on the misleading conduct of the national authorities.[32] However, the ECJ gave robust remedial rulings in a number of other discrimination cases.[33] More generally it seemed after *Factortame I*, *Cotter*, and *Emmott*, that the requirement that remedies for breach of EU law should be effective had become stronger and had modified considerably the basic notion of national procedural autonomy. The deference implicit in earlier rulings was replaced by an expectation that national courts would be creative in deciding which national rules should be disapplied in order to enforce EU law more effectively.

A consequence of this creativity was a greater degree of uncertainty for both national courts and litigants. In *Marshall II*, the complainant was faced with a domestic statutory ceiling on awards of

[27] Case C–177/88 *Dekker v Stichting voor Jong Volwassenen (VJV) Plus* [1990] I–ECR 3941, [26].

[28] Case C–377/89 *Cotter and McDermott v Minister for Social Welfare* [1991] ECR I–1155, [21].

[29] Contrast Case 68/79 *Hans Just I/S v Danish Ministry for Fiscal Affairs* [1980] ECR 501, in which the state was not obliged to repay taxes it had imposed in breach of Community law, if that would unjustly enrich a trader who had passed on the cost of the tax to third parties. See also Cases C–192–218/95 *Comateb* (n 11); Case C–453/99 *Courage Ltd v Crehan* [2001] ECR I–6297, [30]; Cases C–295–298/04 *Manfredi v Lloyd Adriatico Assicurazion SpA et al* [2006] ECR I–6619. The difference in the way the unjust enrichment argument was treated in these cases on the one hand and in *Cotter* on the other is not always easy to understand. For further cases on this subject see (n 213).

[30] Case C–208/90 *Emmott v Minister for Social Welfare* [1991] ECR I–4269.

[31] Ibid [21], [23].

[32] Notably, the Commission tried to revive *Emmott* and give it a broader reading in a 2003 Communication: COM(2002)725 on Better Monitoring of the Application of Community Law, fn 36.

[33] The ECJ ruled that following the disapplication of an offending national law and pending the adoption of non-discriminatory rules, the appropriate interim remedy would be to level upwards to the existing EU rule: Case 286/85 *McDermott and Cotter* [1987] ECR 1453; Case C–33/89 *Kowalska* [1990] ECR I–2591, [20]; Case C–18/95 *Terhoeve* [1999] ECR I–345, [57].

compensation for discrimination in breach of EU law. The question was whether the national court should ignore or override the statutory limit even though it did not render the exercise of her right 'practically impossible'.

Case C–271/91 **Marshall v Southampton and South-West Hampshire Area Health Authority** (II)
[1993] ECR I–4367

Following the ECJ's ruling in Case 152/84 *Marshall (No. 1)*,[34] the case was remitted to the Industrial Tribunal, which assessed compensation at £18,405 including a sum of £7,710 by way of interest. Under UK legislation, however, the maximum amount of compensation which could be awarded was £6,250, and it was unclear whether the Industrial Tribunal had power to award interest. The House of Lords asked the ECJ whether such an applicant was entitled to full reparation for the loss sustained, and whether Article 6 of Directive 76/207 could be relied on to challenge national legislation limiting the amount of compensation to be awarded.

THE ECJ

23. As the Court held in Case 14/83, *Von Colson and Kamann* v. *Land Nordrhein-Westfalen* [1984] ECR 1891, paragraph 18, Article 6 does not prescribe a specific measure to be taken in the event of a breach of the prohibition of discrimination but leaves Member States free to choose between the different solutions suitable for achieving the objective of the Directive, depending on the different situations which may arise.

24. However, the objective is to arrive at real equality of opportunity and cannot therefore be attained in the absence of measures appropriate to restore such equality when it has not been observed. As the Court stated in paragraph 23 in *Von Colson*, cited above, those measures must be such as to guarantee real and effective judicial protection and have a real deterrent effect on the employer.

25. Such requirements necessarily entail that the particular circumstances of each breach of the principle of equal treatment should be taken into account. In the event of discriminatory dismissal contrary to Article 5(1) of the Directive, a situation of equality could not be restored without either reinstating the victim of discrimination or, in the alternative, granting financial compensation for the loss and damage sustained.

26. When financial compensation is the measure adopted in order to achieve the objective indicated above, it must be adequate, in that it must enable the loss and damage actually sustained as a result of the discriminatory dismissal to be made good in full in accordance with the applicable national rules.

. . .

30. It also follows from that interpretation that the fixing of an upper limit of the kind at issue in the main proceedings cannot, by definition, constitute proper implementation of Article 6 of the directive, since it limits the amount of compensation *a priori* to a level which is not necessarily consistent with the requirement of ensuring real equality of opportunity through adequate reparation for the loss and damage sustained as a result of discriminatory dismissal.

31. With regard to the second part of the second question relating to the award of interest, suffice it to say that full compensation for the loss and damage sustained as a result of discriminatory dismissal cannot leave out of account factors, such as the effluxion of time, which may in fact reduce its value. The award of interest, in accordance with the applicable national rules, must therefore be regarded as an essential component of compensation for the purposes of restoring real equality of treatment.

[34] See Ch 7.

Here, two national rules governing remedies—a substantive rule imposing a ceiling on damages and a jurisdictional rule concerning the power to award interest—had to be disapplied by the national court in order to provide an effective remedy for breach of EU law.

Marshall II contrasts with earlier case law of the Court, in particular the decisions in *Humblet*[35] and *Roquette*.[36] In those cases the ECJ had ruled that it was for the Member States to decide whether or not to award interest on the reimbursement of sums wrongly levied under Community law, whereas in *Marshall II* it was not open to the Member State to refuse to pay interest. While later cases like *Sutton* narrowed the scope of *Marshall II* in some respects, by treating compensation for dismissal as distinct from repayment of social security arrears,[37] other cases like *Evans* have affirmed and extended it by declaring that where compensation or restitution is required by a particular directive, national law must not exclude factors such as the effluxion of time which affect the value of the compensation or restitution.[38]

Another important case which starkly illustrated the tension between the 'no new remedies' rule and the emerging principle of effectiveness was *Factortame I*.[39] The ECJ, drawing on its earlier *Simmenthal* ruling,[40] insisted on the priority of the requirement of effectiveness over settled principles of UK law to rather dramatic effect, since the national rule in question was a basic principle ('no interim relief against the Crown') which, according to the House of Lords, prohibited absolutely the grant of the particular remedy.

Case C–213/89 **R v Secretary of State for Transport, ex parte Factortame Ltd and Others**
[1990] ECR I–2433

[Note Lisbon Treaty renumbering: Art 5 EEC is now Art 4(3) TEU]

Factortame and other companies, whose directors and shareholders consisted mainly of Spanish nationals, were incorporated under UK law and operated fishing vessels registered as British vessels under British law. The 1988 Merchant Shipping Act was introduced to require all fishing vessels to register anew, and the applicants did not satisfy the new registration conditions. They argued that these conditions, including a 75 per cent nationality requirement for directors and shareholders, breached EU law, and they sought interim relief pending final judgment. When the case reached the House of Lords it was held that interim relief was precluded both by the common law rule prohibiting the grant of an interim injunction against the Crown and by the presumption that an Act of Parliament is in conformity with EU law until a decision on its compatibility has been given. However, the House of Lords referred the case to the ECJ to see if interim relief was required as a matter of EU law.

THE ECJ

13. The House of Lords . . . found in the first place that the claims by the appellants in the main proceedings that they would suffer irreparable damage if the interim relief which they sought were not granted and they were successful in the main proceedings were well founded. However, it held that, under national law, the English courts had no power to grant interim relief in a case such as the one before it. . . .

[35] Case 6/60 (n 3).
[36] Case 26/74 *Société Roquette Frères v Commission* [1976] ECR 677.
[37] Case C–66/95 *R v Secretary of State for Social Security, ex p Eunice Sutton* [1997] ECR I–2163.
[38] Case C–63/01 *Evans* (n 106) [67]–[71]. On whether costs are recoverable see Case C–472/99 *Clean Car Autoservice GmbH v Stadt Wien* [2001] ECR I–9687, [27]–[31].
[39] Case C–213/89 *R v Secretary of State for Transport, ex p Factortame Ltd* [1990] ECR I–2433.
[40] Case 106/77 *Amministrazione delle Finanze dello Stato v Simmenthal SpA* [1978] ECR 629.

> . . .
> 17. [T]he preliminary question raised by the House of Lords seeks essentially to ascertain whether a national court which, in a case before it concerning Community law, considers that the sole obstacle which precludes it from granting interim relief is a rule of national law, must disapply that rule.
> . . .
> 19. In accordance with the case-law of the Court, it is for the national courts, in application of the principle of cooperation laid down in Article 5 of the EEC Treaty, to ensure the legal protection which persons derive from the direct effect of provisions of Community law. . . .
> 20. The Court has also held that any provision of a national legal system and any legislative, administrative or judicial practice which might impair the effectiveness of Community law by withholding from the national court having jurisdiction to apply such law the power to do everything necessary at the moment of its application to set aside national legislative provisions which might prevent, even temporarily, Community rules from having full force and effect are incompatible with those requirements, which are the very essence of Community law (judgment of 9 March 1978 in Case 106/77 *Simmenthal* [1978] ECR 629).
> 21. It must be added that the full effectiveness of Community law would be just as much impaired if a rule of national law could prevent a court seised of a dispute governed by Community law from granting interim relief in order to ensure the full effectiveness of the judgment to be given on the existence of the rights claimed under Community law. It follows that a court which in those circumstances would grant interim relief, if it were not for a rule of national law, is obliged to set aside that rule.

The emphasis in *Factortame* is firmly on the requirement of effectiveness of EU law, rather than on the primary role of national procedural law. The ECJ left it to the House of Lords to specify the conditions under which interim relief should be granted,[41] but made clear that a rule which prohibited absolutely the grant of interim relief would be unacceptable.[42]

(B) A MORE CAUTIOUS APPROACH

Immediately after *Marshall II* in 1993, however, the ECJ seemed to pull back from the boldness of its rulings in *Dekker*, *Factortame I*, *Emmott*, and *Marshall II*. The case of *Steenhorst-Neerings* concerned an action for retrospective payment of several years of disability benefit, covering the period when the Directive on sex discrimination in social security had not been properly implemented into Dutch law.[43] Dutch law provided that such benefits should not be payable retroactively for more than one year. The ECJ however distinguished the case from *Emmott*, despite the similarities between the two, ruling that the one-year period for retroactive payment was not a time limit for bringing proceedings, and did not operate (as in *Emmott*) as an absolute bar on bringing an action. Instead, it satisfied the twin conditions of equivalence and practical possibility, and more particularly it served a legitimate purpose including 'preserving financial balance . . . in a scheme in which claims submitted by insured persons in the course of a year must in principle be covered by the contributions collected during that same year'.[44]

[41] The precise conditions under which interim relief against a provision of national law which implemented Community law should be available were later specified by the ECJ in Cases C–143/88 and C–92/89 *Zuckerfabrik Süderdithmarschen* [1991] ECR I–415; Case C–334/95 *Kruger GmbH* [1997] ECR I–4517; Cases C–453/03, 11, 12 and 194/04 *ABNA* [2005] ECR I–10423.

[42] Similarly in *Unibet* (n 16), the ECJ ruled that while interim relef had to be available where the effectiveness of the main judgment on the existence of EU rights depended upon it, the conditions for the grant of interim relief were (at least where the compatibility of national law with EU law is being challenged) for national law to determine, subject to the requirements of equivalence and effectiveness.

[43] Case C–338/91 *Steenhorst-Neerings* [1993] ECR I–5475.

[44] Ibid [23].

Clearly the circumstances in *Steenhorst-Neerings* were similar to those in *Emmott*, where a plaintiff who had been prevented from claiming a right under EU law, in circumstances of sex discrimination, now confronted a restriction which substantially reduced the effectiveness of the available remedy. The broader principle articulated in *Emmott*, that a Member State cannot rely on domestic rules to limit an applicant's claim to rights under a directive until that directive has been properly implemented, was abandoned. Later case law, including *Texaco A/S*,[45] *Fantask A/S*,[46] *BP Supergas*,[47] and *Spac*,[48] suggests that the fact that the state itself was at fault in *Emmott* and had led the applicant to make the error in question was highly relevant to the ruling in the case.[49] The *Levez* case also supports this reading of *Emmott*, since the ECJ there acknowledged that an otherwise reasonable legislative limit on the retroactivity of a claim for damages could be rendered inapplicable by the improper conduct of the defendant employer.[50]

Confirming the trend of *Steenhorst-Neerings*, the ECJ in *Johnson II* ruled that 'the solution adopted in *Emmott* was justified by the particular circumstances of that case, in which a time-bar had the result of depriving the applicant of any opportunity whatever to rely on her right to equal treatment under the directive'.[51] *Steenhorst-Neerings* had represented a retreat not only from *Emmott*, but also from the principle of adequacy of compensation for sex discrimination established in *Marshall II*. This was reinforced in *Johnson II*, where the Court ruled that, even in the absence of state concerns to ensure administrative convenience and financial balance, a provision restricting to one year the retroactive effect of a claim for a non-contributory incapacity benefit was compatible with Community law.[52] In *Sutton* the ECJ had to deal directly with the scope of its ruling in *Marshall II*, and confined it further by introducing a distinction between dismissal on grounds of sex and the discriminatory denial of social security benefits.

Case C–66/95 **R v Secretary of State for Social Security, ex parte Eunice Sutton**
[1997] ECR I–2163

The applicant successfully challenged the refusal to grant her an invalid care allowance under national law, on the basis that this contravened Directive 79/7 on equal treatment in social security. She was awarded arrears of benefit, but was refused interest because national law did not provide for the payment of interest on social security benefits. On a reference to the ECJ, she argued that Article 6 of Directive 79/7 was almost identically worded to Article 6 of Directive 76/207 in *Marshall II*, both being concerned with equal treatment, and that interest should therefore be awarded just as in the earlier case.

Contrast Case C–246/96 *Magorrian and Cunningham v Eastern Health and Social Services Board* [1997] ECR I–7153; Case C–78/98 *Preston v Wolverhampton Healthcare NHS Trust* [1999] ECR I–3201.

THE ECJ

23. That interpretation cannot be adopted. The judgment in *Marshall II* concerns the award of interest on amounts payable by way of reparation for loss and damage sustained as a result of discriminatory dismissal. As the Court observed in paragraph 31 of that judgment, in such a context full compensation for the loss and damage sustained cannot leave out of account factors, such as the effluxion of time, which may in fact reduce its value. The award of interest, in accordance with the applicable national rules, must therefore be regarded as an essential component of compensation for the purposes of restoring real equality of treatment.

24. By contrast, the main proceedings concern the right to receive interest on amounts payable by way of social security benefits. Those benefits are paid to the person concerned by the competent bodies, which must, in particular, examine whether the conditions laid down in the relevant legislation are fulfilled. Consequently, the amounts paid in no way constitute reparation for loss or damage sustained and the reasoning of the Court in its judgment in *Marshall II* cannot be applied to a situation of that kind.

. . .

27. . . . Amounts paid by way of social security benefit are not compensatory in nature, with the result that payment of interest cannot be required on the basis either of Article 6 of Directive 76/207 or of Article 6 of Directive 79/7.

Sutton thus suggests that the requirements imposed by EU law on the availability of national remedies may depend on the nature of the right at stake and on the EU measure which has been breached.[53] Payment of arrears of social security benefits was distinguished from 'compensation for loss or damage', so that there was no requirement of full or adequate compensation for the former under national law.

Finally, even if there is a requirement of adequate compensation for damage caused by a breach of a particular directive, such as the Equal Treatment Directive, a ceiling on damages will not always be impermissible. A maximum upper limit on damages is acceptable in certain cases, such as a case of sex discrimination in access to employment, where the claimant would not have been successful in obtaining the job even in the absence of discrimination, so that the loss sustained is more limited.[54]

(c) WHEN SPECIFIC REMEDIES MUST BE MADE AVAILABLE

Despite drawing back from the full implications of the specific rulings in *Emmott* and *Marshall II* however, the ECJ did not retreat from the robust requirement of adequate and effective national remedies, and has built on the precedent of the repayment cases[55] and the *Factortame I* case[56] to rule that in certain circumstances national law must provide for a particular kind of remedy for violation of EU law.

[53] The cases concerning repayment of sums wrongly paid are instructive, since not all repayment cases are subject to the same analysis. Contrast some of the cases concerning unduly paid agricultural subsidies with those concerning improperly paid state aid: compare, eg, Case C–24/95 *Land Rheinland-Pfalz v Alcan Deutschland* [1997] ECR I–1591 on state aid with Case C–298/96 *Oelmühle Hamburg v Bundesanstalt für Landwirtschaft und Ernährung* [1998] ECR I–4767 and Case C–366/95 *Landbrugsministeriet—EF-Direktoratet v Steff-Houlberg Export* [1998] ECR I–2661 on agricultural subsidies.

[54] Case C–180/95 *Draehmpaehl v Urania Immobilienservice* [1997] ECR I–2195. The judgment is now reflected in Art 18 of the amended Equal Treatment Dir 2006/54 [2006] OJ L204/23, as an exception to the rule that there can be no prior upper limit on damages set by national law.

[55] See (nn 11–12).

[56] See Section 3(b) above.

In *Metallgesellschaft & Hoechst*, in which the plaintiffs challenged the imposition of advance corporation tax (ACT) on subsidiaries whose parent companies were not resident within the Member State, the ECJ ruled that it was for the national court to classify the nature of an action brought, whether as an action for restitution or an action for compensation for damage.[57] The national court argued that it was not clear whether English law even provided for restitution for damage arising from loss of the use of sums of money where no principal sum was due, but the ECJ responded that in an action for restitution, the 'principal sum' due was precisely the amount of interest which would have been generated by the sum, use of which was lost as a result of the premature levy of the tax. In other words, the very substance of the plaintiffs' claim was the interest which would have accrued had they not been subject to discriminatory advance taxation. The ECJ ruled:

> Consequently, Article 52 [*now Art 49 TFEU*] of the Treaty entitles a subsidiary resident in the United Kingdom and/or its parent company having its seat in another Member State to obtain interest accrued on the ACT paid by the subsidiary during the period between the payment of ACT and the date on which MCT became payable, and that sum may be claimed by way of restitution.[58]

While restitution was not a remedy unknown to the English legal system, the ECJ brushed aside the national court's argument that restitution might not be available in these circumstances by characterizing the claim as damage flowing directly from the breach of Article 49 TFEU (ex Article 52 EC). On the question whether full compensation equal to the sum claimed by the plaintiffs had to be paid, the ECJ referred to the difference between *Marshall II* (in which interest was held to be an essential component of compensation to restore equality of treatment) and *Sutton* (in which interest was deemed not to be an essential component of the right to obtain arrears of benefits), and deemed *Metallgesellschaft* to be analogous to *Marshall II*, with interest as an essential component of the claim.

This robust ruling on the obligation of a national court to provide a specific substantive remedy was echoed in the rulings in *Courage*,[59] *Manfredi*,[60]and *Muñoz*.[61] In *Courage*, the ECJ ruled that an action in damages against another party for breach of Article 81 EC, now Article 101 TFEU, must in principle be available to an individual before national courts.[62] In *Manfredi*, also concerning breach of EU competition law, the Court ruled that injured parties must be able to seek compensation not only for actual loss, but also for loss of profit.[63] In *Muñoz*, the full effectiveness of the EU rules on quality standards was held to require that a civil action based on non-compliance with these rules should be available.[64]

[57] Case C–410/98 *Metallgesellschaft & Hoechst v Inland Revenue* [2001] ECR I–4727.

[58] Ibid [89].

[59] Case C–453/99 *Courage* (n 29).

[60] Cases C–295–298/04 *Manfredi* (n 29).

[61] Case C–253/00 *Muñoz y Cia SA and Superior Fruiticola SA v Frumar Ltd and Redbridge Produce Marketing Ltd* [2002] ECR I–7289. See also Cases C–145–149/08 *Club Hotel Loutraki AE*, 6 May 2010, [78]–[80], where the ECJ ruled that effective judicial protection of a tenderer whose tender had been blocked by the unlawful decision of an administrative authority which affected the procurement process required that he must be able to bring an action for compensation before the national courts.

[62] Case C–453/99 (n 29) [25]–[28].

[63] Cases C–295–298/04 (n 29) [100].

[64] Case C–253/00 (n 61) [30]–[32]. Compare Case C–13/01 *Safalero* (n 19) where the ECJ held there was no obligation on a state to permit an affected third party importer to challenge the confiscation of goods held by another, where that third party had the right to bring proceedings for a declaration of incompatibility of the seizure with EC law. Compare also Case C–216/02 *Österreichischer Zuchtverband für Ponys, Kleinpferde und Spezialrassen v Burgenländische Landesregierung* [2004] ECR I–10683.

In these cases, the Court focused primarily not on the procedural autonomy of the national legal system, but instead on the nature or importance of the substantive EU right in issue, for example, non-discrimination under Article 49 TFEU in *Factortame* and *Metallgesellschaft*, equal treatment in employment in *Marshall II*, competition law rules in *Courage*, *Manfredi,* and *Eco Swiss China Time,*[65] and quality standards and fair trading in *Muñoz*.[66]

The Court's choice to emphasize the substantive EU right at issue, in particular where detailed EU legislation on the substance exists, seems to increase the likelihood that it will indicate a need to override or disapply a restrictive national rule. Conversely, in cases in which the Court begins by emphasizing the presumptive legitimacy of national remedial rules, such as *Steenhorst-Neerings*, *Sutton*, and *Johnston II*, such an outcome is correspondingly less likely. Another suggestion which has been offered to distinguish the cases in which the ECJ emphasizes the substance of the EU right as compared with those in which it emphasizes the legitimacy of national rules is that the former cases are those concerned with 'remedial rights' such as damages, injunctions, compensation, and access to court, whereas the latter concern 'ancillary procedural rights' governing the remedial rights such as interest, fair time-limits, legal aid, and evidentiary rules.[67]

5 THE CURRENT APPROACH: BALANCING EFFECTIVE JUDICIAL PROTECTION AND NATIONAL PROCEDURAL AUTONOMY

The position currently reached in the field of national remedies for EU rights can be summarized as follows: it requires national courts to strike an appropriate, proportionality-based, case-by-case balance between the requirement of effective judicial protection for EU law rights and the application of legitimate national procedural and remedial rules. In deciding whether a national rule or principle could undermine the exercise of an EU law right, national courts must weigh the requirements of effectiveness and equivalence in the light of the aim and function of the national rule. This approach was first articulated clearly in the cases of *Peterbroeck*[68] and *Van Schijndel*,[69] concerning the authority of national courts to raise points of EU law of their own motion.

(A) EFFECTIVENESS

In this section some clusters of cases dealing with certain kinds of national rule will be outlined briefly to illustrate what guidance the ECJ is giving national courts on how to undertake this balancing task.

[65] Case C–126/97 *Eco Swiss China Time Ltd v Benetton International NV* [1999] ECR I–3055; Case C–234/04 *Kapferer v Schlank & Schick* [2006] ECR I–2585, on consumer protection in contract law.

[66] For an argument that the uncertainty in the case law on national judicial protection is attributable to 'an uncertainty regarding the exact content of these rights in need of remedial protection' see T Eilmansberger, 'The Relationship between Rights and Remedies in EC Law: In Search of the Missing Link' (2004) 41 CMLRev 1199.

[67] J Engström, *The Europeanization of Remedies and Procedures through Judge-Made Law* (PhD, EUI, 2009).

[68] Case C–312/93 *Peterbroeck, Van Campenhout & Cie v Belgian State* [1995] ECR I–4599.

[69] Cases C–430–431/93 *Van Schijndel & Van Veen v Stichting Pensioenfonds voor Fysiotherapeuten* [1995] ECR I–4705.

(i) *The Authority of National Courts to Consider EU Law of their own Motion*

Cases C–430–431/93 **Van Schijndel & Van Veen v Stichting Pensioenfonds voor Fysiotherapeuten**
[1995] ECR I–4705

The applicants argued that the appeal court whose ruling they sought to challenge ought to have considered, if necessary of its own motion, the compatibility of a compulsory Pension Fund provision with EU competition law. They had not themselves previously raised any point of EU law. Under Dutch law, such a plea involving a new argument could only be made where no examination of facts was required, and the court could not raise such points of law of its own motion. On a reference, the ECJ was asked whether the national court must apply provisions of EU law even where the party to the proceedings had not relied on them. The ECJ referred to the basic notion of national procedural autonomy, qualified by the principles of equivalence and practical effectiveness, and continued:

THE ECJ

19. For the purposes of applying those principles, each case which raises the question whether a national procedural provision renders application of Community law impossible or excessively difficult must be analysed by reference to the role of that provision in the procedure, its progress and its special features, viewed as a whole, before the various national instances. In the light of that analysis the basic principles of the domestic judicial system, such as the protection of the rights of the defence, the principle of legal certainty and the proper conduct of procedure must, where appropriate, be taken into consideration.

20. In the present case, the domestic law principle that in civil proceedings a court must or may raise points of its own motion is limited by its obligation to keep to the subject matter of the dispute and to base its decision on the facts put before it.

21. That limitation is justified by the principle that, in a civil suit, it is for the parties to take the initiative, the court being able to act of its own motion only in exceptional cases where the public interest requires its intervention. That principle reflects conceptions prevailing in most of the Member States as to the relations between the State and the individual; it safeguards the rights of the defence; and it ensures proper conduct of proceedings by, in particular, protecting them from the delays inherent in examination of new pleas.

22. In those circumstances, the answer to the second question must be that Community law does not require national courts to raise of their own motion an issue concerning the breach of provisions of Community law where examination of that issue would oblige them to abandon the passive role assigned to them by going beyond the ambit of the dispute defined by the parties themselves and relying on facts and circumstances other than those on which the party with an interest in application of those provisions bases his claim.

While *Van Schijndel* indicated that the principle of judicial passivity was compatible, on the facts, with the exercise of the EU right, the opposite conclusion was reached soon afterwards in the *Peterbroeck* case.[70] In *Peterbroeck*, where similar aims of legal certainty and the proper conduct of procedure underpinned a procedural provision of the Belgian Tax Code preventing both the parties and the court from raising a point of EU law after sixty days, the application of the rule was held by

[70] (N 68).

the ECJ to render the exercise of the EU right excessively difficult.[71] These rulings and their different outcomes indicate clearly that each national provision governing enforcement of an EU right before national courts must be examined and weighed not in the abstract, but in the very specific circumstances of each case, to see whether it renders the exercise of that right excessively difficult. The rationale underpinning *Van Schijndel* was later affirmed and reasserted in *van der Weerd*, in which the ECJ ruled that the national court was *not* required to raise the relevant point of EU law of its own motion where the parties had had a genuine opportunity to raise the point themselves before a national court.[72]

In *Kraaijeveld*, the ECJ indicated that EU law does not confer a *general* power on national courts to consider points of EU law of their own motion but, pursuant to the equivalence principle, if they have a discretion or obligation to raise points of national law of their own motion they must also apply such discretion or obligation to points of EU law.[73] Similarly in *Fazenda Pública*, the Court linked the power, and 'in certain cases' the obligation, of national courts to make a reference to the ECJ with their power or obligation to raise points of EU law of their own motion.[74] In *Eco Swiss China Time* concerning competition law rules the ECJ also ruled that, since national courts were required to permit an application for annulment of an arbitration award on grounds of failure to observe national public policy rules, they must similarly raise a point based on breach of Article 101 TFEU,[75] giving EU competition law rules the same status as national public policy rules.

The ECJ in *Océano* however went beyond the equivalence requirement by declaring that the aims of the Unfair Contract Terms Directive would not be ensured if the consumer were obliged to raise the unfair nature of such terms, and that the national court *must have the power* to evaluate terms of this kind of its own motion.[76] This formulation, stronger than that of the earlier cases, was linked to the facts of *Océano* concerning EU consumer protection law.[77] By comparison, in *van der Weerd* the ECJ ruled that there was no breach of either the equivalence or the effectiveness principle.[78] In terms of equivalence, the provisions of the EU Directive on control of foot-and-mouth disease in issue, unlike EU competition rules or rules on consumer protection,[79] did not have the same status as public policy rules, so that national courts were not required to raise the point of their own motion. In terms of effectiveness, the ECJ in *van der Weerd* found no violation of this principle, and explicitly distinguished the situations in *Océano* and *Eco Swiss China Time* where the parties had no real opportunity to raise the point of EU law themselves before the national courts.[80]

(ii) *Legal Certainty and* Res Judicata

In the case of *Kühne and Heitz*, the ECJ ruled that a national administrative body had to reopen a decision that had become final following a national court ruling which was based on a

[71] This was apparently because no court or tribunal in the proceedings had had an opportunity to raise the point of EC law so as to make a reference to the ECJ. See also Case C–327/00 *Santex* (n 50), for a case in which a plea which would otherwise have been inadmissible on grounds of delay may have to have been considered by the national court due to the conduct of the defendant public authority.

[77] Case C–473/00 *Cofidis* [2002] ECR I–10875; Case C–168/05 *Mostaza Claro* [2006] ECR I–10421; Case C–429/05 *Rampion* [2007] ECR I–8017; Case C–243/08 *Pannon* [2009] ECR I–4713; Case C–40/08 *Asturcom Telecomunicaciones v Cristina Rodríguez Nogueira* [2009] ECR I–9579; Case C–227/08 *Martín Martín v EDP Editores SL*, 17 Dec 2009.

[78] (N 72) [75]–[77].

[79] Case C–40/08 *Asturcom* (n 77) [52].

[80] (N 72) [40].

misunderstanding of EU law.[81] This was affirmed in *Kempter*, in which the ECJ ruled that an obligation of review would arise where the contested administrative decision which had become final was based on a misinterpretation of EU law adopted without any preliminary reference being made to the ECJ on the question.[82] The obligation would arise even where the parties themselves had not raised the point of EU law before the national court, at least in circumstances where national courts were permitted to raise rules of national law of their own motion and therefore should equally have been in a position to raise the relevant point of EU law.[83]

The subsequent *Kapferer* ruling seemed to limit the scope of *Kühne and Heitz*, by underscoring the legitimacy of the principle of *res judicata* and the finality of national judicial proceedings,[84] and by distinguishing the situation of a national court in *Kapferer* from that of national administrative bodies in *Kühne and Heitz* and *Kempter*. However, in *Lucchini*, concerning recovery of unlawful state aid, the ECJ went further and ruled that EU law precludes a national rule on *res judiciata* from being applied by a court to prevent the recovery of aid which had been found by the Commission to be definitively incompatible with EU law.[85] Although the *Lucchini* ruling stressed the distinctiveness of the state aid context, in which the Commission rather than the national courts or authorities has the ultimate authority to rule on the compataiblity of state aid, the Court in *Olimpiclub* gave another strong ruling to the effect that a national court could not rely on the principle of *res judiciata* in the context of VAT, since this would excessively undermine the effectiveness of EU VAT rules.[86]

Although the facts of these cases are all slightly different, some relying on the distinction between national courts and national administrative authorities, and others depending on the final authority of the Commission to rule on state aid cases, or on the negative effects for the domestic taxation system of a judicial ruling incompatible with EU law being treated as final, taken together these rulings demonstrate that the domestic law principle concerning the finality of judicial proceedings, the principle of *res judicata*, will often be required to give way to the need to take a binding ruling of EU law into consideration.

(iii) *Limitation Periods*

The general position laid down by the ECJ is that reasonable national limitation periods are, in principle, compatible with EU requirements.[87] However, reasonable limitation periods may be rendered incompatible with EU law where the effective protection of EU rights is negatively affected by other factors,[88] for example: where the date on which the period begins to run is unclear; or

[81] Case C–453/00 *Kühne and Heitz* [2004] ECR I–837; R Caranta, Note (2005) 42 CMLRev 179.

[85] Case C–119/05 *Lucchini* [2007] ECR I–6199; A Biondi, Note (2008) 45 CMLRev 1459.

[86] Case C–2/08 *Amministrazione dell'Economia e delle Finanze v Fallimento Olimpiclub Srl* [2009] ECR I–7501.

[87] Case C–542/08 *Friedrich G Barth,* 15 Apr 2010, where a three-year limitation on bringing an action to recover length-of-service increments (based on *Köbler*, n 162) was acceptable; Cases C–95 and 96/07 *Ecotrade SpA* [2008] ECR I–3457, where the effectiveness of EU law was not infringed merely because the national tax authority had a longer period in which to recover unpaid VAT than the period granted to taxable persons for the exercise of their right to deduct.

[88] In Case C–69/08 *Raffaello Visciano* [2009] ECR I–6741, the ECJ ruled that Dir 80/987 on the protection of employees in the event of the insolvency of their employer did not preclude a limitation period of one year, but it emphasized two factors which were liable to undermine its effectiveness: first, uncertainty as to when the limitation period starts to run; and, secondly, the classification of the benefit by the national court as social security, which would change the applicable time limit. See also Case C–349/07 *Sopropé—Organizações de Calçado Lda* [2008] ECR I–10369, on whether a period of 8–15 days allowed for recovery of a customs debt was sufficient.

commences before the applicant knew or should have known of the violation:[89] or where the limitation period applies retroactively; [90] or the national court has too much discretion in determining whether proceedings were brought 'promptly'.[91]

In *Manfredi* the ECJ declared that a national rule under which the limitation period begins to run from the day on which an anti-competitive agreement or concerted practice is adopted could make it practically impossible to exercise the right to seek compensation for the harm caused, particularly if the limitation period is also a short one and not capable of being suspended.[92] In *Marks & Spencer*[93] and *Grundig Italiana*,[94] the Court ruled that although national legislation reducing the period within which repayment of sums collected in breach of Community law may be sought is not in itself incompatible with the effectiveness principle, the new limitation period must remain reasonable and must include adequate transitional arrangements. [95]

The diversity of national time limits across the EU means that the Court generally grants considerable latitude in determining what is reasonable, but it is nonetheless clear that some kind of comparative judgement is being made by the ECJ with reference to the practices of other Member States.[96]

(iv) *Rules of Evidence*

In *Boiron*, a case concerning state aid, the question was whether national rules placing the burden of proof for demonstrating overpayment of competitors on an economic operator complied with the principle of effectiveness.[97] The ECJ ruled that where the national court found that this evidentiary requirement rendered it excessively difficult for the operator to produce the necessary proof, that court was required 'to use all procedures available to it under national law, including that of ordering the necessary measures of inquiry, in particular the production by one of the parties or a third party of a particular document' to comply with the EU requirement of effective judicial protection.[98]

Steffenson concerned a directive on control of foodstuffs which required a second opinion on the analysis of a sample of foodstuffs to be obtained in circumstances such as those of the case, where a manufacturer was fined for misleading quality-labelling.[99] A second opinion had not been obtained in this case, and the question was whether the sample could be introduced in evidence despite the violation of the Directive's second-opinion requirement. Under German law, evidence obtained by an

[95] In *Grundig Italiana* [37]–[42], a 90-day transitional limitation period was unreasonable and insufficient, given that it replaced a previous five-year period for preparing and submitting proceedings.

[96] Case C–30/02 *Recheio—Cash & Carry* (n 90) [22].

[97] Case C–526/04 *Laboratoires Boiron SA v URSSAF de Lyon* [2006] ECR I–7529.

[98] Ibid [57].

[99] Case C–276/01 *Joachim Steffensen* [2003] ECR I–3735.

irregular administrative procedure could nonetheless be admitted in legal proceedings, and evaluated on that basis. The ECJ gave extensive guidance to the national court on how to apply the effectiveness requirement in this case, drawing on ECHR jurisprudence concerning the 'adversarial principle' and the right to a fair hearing.[100] *Steffensen* thus introduces yet another important factor, respect for ECHR rights, into the matrix which national courts must consider when weighing the effectiveness of remedies for EU rights against national procedural rules.[101]

(v) *Access to Court*

We have seen that even in early cases like *Heylens*,[102] the ECJ emphasized the importance of access to judicial control for the vindication of EU law rights,[103] identifying it as a fundamental right guaranteed under the ECHR and the Charter of Fundamental Rights.[104] However, the ECJ has also accepted the imposition of reasonable national restrictions and preconditions on the fundamental right of access to court.

In *Upjohn* it ruled that EU law did not require the availability of a domestic judicial review procedure under which national courts would be competent to substitute their assessment of the facts and the scientific evidence found for that of the national decision-making body, provided that those courts were empowered effectively to apply the principles of EU law when conducting judicial review.[105] In *Evans* a system of national redress which provided for a combination of administrative review, arbitration (including appropriate procedural rights) and appellate judicial review for accident compensation claims was held to satisfy the requirement of effective protection.[106] In *Schneider*, the right was satisfied by the existence of an action for state liability before the civil courts, even if a parallel action before the administrative courts was limited in terms of the factual review which could be carried out.[107]

In *Alassini*,[108] the requirement of prior implementation of an out-of-court settlement procedure before having recourse to legal proceedings did not, subject to a range of conditions concerning matters such as costs and delay,[109] infringe the principles of effectiveness or equivalence in the context of the Univeral Service Directive. Similar rulings were given in the *Tele2*[110] and *Mono Car Styling*[111] cases, in which the ECHR and the Charter of Rights were again cited as the basis for the principle of effective judicial protection. In *Mono Car Styling*, the Court accepted that national rules imposing various conditions on the right of action granted to workers affected by collective redundancy did

[107] Case C–380/01 *Gustav Schneider v Bundesminister für Justiz* [2004] ECR I–1389.

[108] Cases C–317–320/08 *Rosalba Alassini and others*, 18 Mar 2010.

[109] Ibid [53]–[60].

[110] In Case C–426/05 *Tele2 Telecommunication GmbH v Telekom-Control-Kommission* [2008] ECR I–68, a national provision which, in the context of prior non-adversarial market-analysis proceedings, granted party status only to companies formerly having significant power on the relevant market was ruled not to be contrary to the principle of effective judicial protection underpinning Art 4 of Dir 2002/21 on electronic communications networks.

[111] Case C–12/08 *Mono Car Styling SA, in liquidation v Dervis Odemis and Others* [2009] ECR I–6653.

not undermine the fundamental principle of effective judicial protection.[112] In *Commission v Greece*, however, a provision of national law concerning tax exemption could deprive individuals of effective judicial protection under EU law where it induced them, for the purposes of avoiding criminal proceedings, to refrain from seeking the legal remedies provided for as a matter of course by national law.[113] In *Janecek* too, the ECJ gave a strong ruling on the requirement of individual access to court to enforce particular obligations on national authorities in the context of an environmental directive.[114] Finally, in *DEB*, the ECJ ruled that the principle of effective judicial protection in Article 47 of the Charter required that it should be possible for legal (as opposed to natural) persons to rely on that principle, and required that legal aid granted may cover dispensation from advance payment of the costs of proceedings and the assistance of a lawyer.[115] It was for national courts, ultimately, to determine whether or not the conditions for granting legal aid constituted a disproportionate limitation on the right of access to court.[116]

(B) EQUIVALENCE

We have already seen examples of the requirement of equivalence in the cases on *res judicata* where the ECJ ruled that if a national court may raise certain points of national law of its own motion, it must also have a power to raise similar points of EU law.[117] However, it is often unclear what exactly the requirement of 'equivalence' entails, or when causes of action may be deemed sufficiently similar to require 'equivalent' treatment.

Edis concerned the repayment of charges which had been paid but were not due under EU law, where national law imposed a time limit of three years for bringing proceedings for repayment for such charges. This was less favourable than the ordinary time limits governing actions between individuals for repayment of sums paid but not due.

Case C–231/96 **Edis v Ministero delle Finanze** [1998] ECR I–4951

36. Observance of the principle of equivalence implies, for its part, that the procedural rule at issue applies without distinction to actions alleging infringements of Community law and to those alleging infringements of national law, with respect to the same kind of charges or dues (see, to that effect, Joined Cases 66/79, 127/79 and 128/79 *Amministrazione delle Finanze dello Stato* v. *Salumi* [1980] ECR 1237, paragraph 21). That principle cannot, however, be interpreted as obliging a Member State to

[112] Ibid [50]–[52]. Compare Case C–268/06 *Impact v Minister for Agriculture and Food and Others* [2008] ECR I–2483, where the ECJ ruled that the principle of effectiveness required that a specialized court which was established by legislation transposing Dir 1999/70 on the framework agreement on fixed-term work to hear claims based on infringement of that legislation must also have jurisdiction to hear an applicant's claims arising directly from the Dir itself between the date of the deadline for transposing the Dir and the date on which the transposing legislation entered into force, where the requirement to bring a separate claim based on the Dir before an ordinary court would involve procedural disadvantages liable to render excessively difficult the exercise of the EU rights; see also Cases C–378–380/07 *Kiriaki Angelidaki* (n 20).

[113] Case C–156/04 *Commission v Greece* [2007] ECR I–4129.

[114] Case C–237/07 *Janecek* [2008] ECR I–6221; J Jans, 'Harmonization of National Procedural Law by the Back Door?' in M Bulterman, L Hancher, A McDonnell, and H Sevenster (eds), *Views of European Law from the Mountain* (2009) 267–275; on national *locus standi* rules see Cases C–87–89/90 *Verholen v Sociale Verzekeringsbank* [1991] ECR I–3757, [24].

> extend its most favourable rules governing recovery under national law to all actions for repayment of charges or dues levied in breach of Community law.
>
> 37. Thus, Community law does not preclude the legislation of a Member State from laying down, alongside a limitation period applicable under the ordinary law to actions between private individuals for the recovery of sums paid but not due, special detailed rules, which are less favourable, governing claims and legal proceedings to challenge the imposition of charges and other levies. The position would be different only if those detailed rules applied solely to actions based on Community law for the repayment of such charges or levies.

Similar rulings were given in the cases of *Spac*,[118] *Aprile*,[119] *Dilexport*,[120] *Roquette*,[121] *Pontin*,[122] and *Bulicke*,[123] affirming the acceptability of national time limits which were not the most favourable within the national remedial system, but which applied equally to actions based on EU law and 'similar' actions based on national law.

While the ECJ has frequently stated that it is for the national court to determine the question of equivalence,[124] it has intervened at times to indicate that the application of a particular national rule does not satisfy that principle, or to suggest what other rules of domestic law might provide a comparator for the purposes of considering 'equivalence'. In *Eman and Sevinger*, concerning violation of the right to vote in European Parliament elections, the ECJ proposed that the national court 'may usefully refer to the detailed rules for legal redress laid down in cases of infringement of the national rules in the context of elections to the institutions of the Member State'.[125] In *Weber's Wine World*, the ECJ gave a clear indication of what would be likely to violate the equivalence requirement,[126] and in *Pontin*, a case concerning the dismissal of a pregnant employee, the ECJ suggested, even while leaving the ultimate decision to the national court, that a fifteen-month time limit for bringing an action for reinstatement as compared with a two-month time limit for bringing an action for damages would not seem to comply with the equivalence principle.[127] In *Club Hotel Loutraki*, the ECJ found that the principle of equivalence was violated due to the differences between domestic actions for compensation in the field of public service contracts governed by EU law and domestic actions for compensation for other unlawful action on the part of state actors.[128]

In *Levez*, an employee sought damages for arrears in payment which had been denied to her in breach of the EU equal pay rules. The ECJ had ruled that the two-year limit on arrears of damages in Industrial Tribunal proceedings could not be applied to her on account of the role played by her employer's deception in the delay.[129] However, the UK argued that the time limit should nonetheless apply to her case, because an alternative full remedy before the county court in an action for deceit against her employer and in an action based on the Equal Pay Act had been open to her, so that the exercise of her right was not rendered ineffective in practice. The ECJ accepted the effectiveness point, but went on to consider the requirement of equivalence and gave firm guidance to the national court on how to apply this.[130]

Case C–326/96 **Levez v Jennings Ltd**
[1998] ECR I–7835

43. In order to determine whether the principle of equivalence has been complied with in the present case, the national court—which alone has direct knowledge of the procedural rules governing actions in the field of employment law—must consider both the purpose and the essential characteristics of allegedly similar domestic actions (see *Palmisani*, paragraphs 34 to 38).

44. Furthermore, whenever it falls to be determined whether a procedural rule of national law is less favourable than those governing similar domestic actions, the national court must take into account the role played by that provision in the procedure as a whole, as well as the operation and any special features of that procedure before the different national courts (see, *mutatis mutandis*, *Van Schijndel and Van Veen*, paragraph 19).

[*The ECJ rejected the UK's argument that the equivalence requirement was satisfied by the fact that a claim under the Equal Pay Act (which was intended to implement EC law) was comparable to a claim based directly on Article 157 TFEU, and continued as follows*.]

49. Secondly, it is necessary to consider the possibilities contemplated by the order for reference. It is there suggested that claims similar to those based on the Act may include those linked to breach of a contract of employment, to discrimination in terms of pay on grounds of race, to unlawful deductions from wages or to sex discrimination in matters other than pay.

50. If it transpires, on the basis of the principles set out in paragraphs 41 to 44 of this judgment, that a claim under the Act which is brought before the County Court is similar to one or more of the forms of action listed by the national court, it would remain for that court to determine whether the first-mentioned form of action is governed by procedural rules or other requirements which are less favourable.

51. On that point, it is appropriate to consider whether, in order fully to assert rights conferred by [EU] law before the County Court, an employee in circumstances such as those of Mrs Levez will incur additional costs and delay by comparison with a claimant who, because he is relying on what may be regarded as a similar right under domestic law, may bring an action before the Industrial Tribunal, which is simpler and, in principle, less costly.

52. Also of relevance here is the fact mentioned by the national court that the rule at issue applies solely to claims for equal pay without discrimination on grounds of sex, whereas claims based on 'similar' rights under domestic law are not limited by the operation of such a rule, which means that such rights may be adequately protected by actions brought before Industrial Tribunals.

53. In view of the foregoing, the answer must be that [EU] law precludes the application of a rule of national law which limits an employee's entitlement to arrears of remuneration or damages for breach of the principle of equal pay to a period of two years prior to the date on which the proceedings were instituted, even when another remedy is available, if the latter is likely to entail procedural rules or other conditions which are less favourable than those applicable to similar domestic actions. It is for the national court to determine whether that is the case.

In short, the ECJ has developed the same context-specific balancing approach for national courts to assess the 'equivalence' of domestic rules as it did for assessing their 'effectiveness' in *Peterbroeck* and *Van Schijndel*.

In *Dounias*, the ECJ declared that it was for the national court to scrutinize domestic procedures not only to determine whether they were comparable, but also to detect whether there was any inherent discrimination in their *application* in favour of domestic claims.[131] In *Manfredi*, the Court ruled that

[131] Case C–228/98 *Dounias* (n 103) 65. In this case the Court seemed to suggest that the equivalence principle should be considered first, and only then the effectiveness principle: [60]. See also Cases C–392 and 422/04 *i-21 Germany GmbH and Arcor AG* [2006] ECR I–8559, [68]–[69], on the need for equivalence in the application of rules to EU and domestic law claims.

if in similar domestic actions it is possible to award specific damages such as exemplary or punitive damages, it must also be possible to award them in actions based on EU rules.[132]

It has been argued that an excessive emphasis on the need for *effective* rather than *equivalent* protection of EU rights could actually lead to a reverse form of discrimination in favour of EU law.[133] This notion of genuine equality of remedies for EU rights and national law rights is also mirrored by another development in ECJ case law which points to the need for parity between national-level and EU-level remedies for the enforcement of EU rights. In other words, EU law should not demand better enforcement of EU law from the national legal orders than it is prepared to provide itself at the European level. Thus in *Upjohn*, the ECJ ruled that EU law did not require the Member States to establish a procedure for judicial review of national decisions revoking marketing authorizations for medicinal products, which involved a more extensive review than that carried out by the ECJ in similar cases.[134] And in *Bergaderm*, in an action for damages brought against the EU before the ECJ, the Court ruled that the conditions under which Member States may incur liability for damage to individuals caused by a breach of EU law could not, in principle, differ from those governing the liability of the EU in similar circumstances.[135]

(c) THE EFFECT OF THE PLAINTIFF'S CONDUCT ON THE RIGHT TO AN EFFECTIVE REMEDY

In *Dionysios Diamantis*, the ECJ ruled that a national court may refuse to permit a plaintiff to rely on EU rights if such reliance constitutes an abuse of those rights.[136] However, the ECJ in *Rechberger* rejected Austria's argument that the misconduct of a relevant third party could constitute a defence to an action for damages brought against the state for breach of EU law.[137] In *Courage* the Court ruled that an individual could not be prohibited from relying on Article 101 TFEU simply because he had been party to an anti-competitive agreement, but that EU law did not prohibit a national rule preventing such a party from relying on his own unlawful actions to obtain damages where he bears significant responsibility for the distortion of competition.[138] And in *Manfredi*, the Court ruled that the requirements of effectiveness and equivalence did not prevent national courts from taking steps to ensure that the protection of EU rights did not entail the unjust enrichment of those claiming them.[139]

The ECJ has also considered the impact of a plaintiff's failure to mitigate losses on the avaibiilty and extent of national remedies. In *Metallgesellschaft* the Court dismissed the UK's argument that the plaintiffs should have refused to comply with a national tax rule which infringed their EU rights and should have relied on the direct effect of EU rights, rather than paying the tax and challenging it afterwards.[140] The Court also ruled in *Danske Slagterior* that EU law would not preclude national legislation from refusing to provide reparation for loss to an individual who had willfully or negligently failed

[132] Cases C–295–298/04 *Manfredi* (n 29) [99].

[133] See, eg, AG Jacobs in Cases C–430–431/93 *Van Schijndel* (n 69), and AG Léger in Case C–66/95 *Sutton* (n 37).

[134] Case C–120/97 (n 105) [33].

[135] Case C–352/98 P *Bergaderm v Commission* [2000] ECR I–5291, [41], drawing on Cases C–46 and 48/93 *Brasserie du Pêcheur* [1996] ECR I–1029, [42]; M de Visser, 'The Concept of Concurrent Liability and its Relationship with the Principle of Effectiveness' (2004) 11 MJ 47.

[136] Case C–373/97 *Dionysios Diamantis v Elliniko Dimosio* [1999] ECR I–1705, [42]–[44], in which the ECJ however ruled that some of the impugned conduct would not amount to an abuse of rights under the Second Company Dir.

[137] Case C–140/97 *Rechberger v Austria* [1999] ECR I–3499.

[138] Case C–453/99 *Courage* (n 29) [24], [36].

[139] Cases C–295–298/04 *Manfredi* (n 29) [99]. For further discussion of unjust enrichment see (nn 28–29) and text.

[140] Case C–397/98 *Metallgesellschaft Ltd v Inland Revenue* [2001] ECR I–1727, [99]–[107]. See, for a slightly different ruling under the former ECSC Treaty, Case C–390/98 *Banks v The Coal Authority* [2001] ECR I–6117, [122]–[123].

to avail himself of a legal remedy which would have averted such loss, provided that recourse to the legal remedy in question could reasonably be expected.[141] Thus reasonable national rules governing the responsibility of parties to show due diligence in mitigating their losses are quite compatible with EU law so long as they are applied equally to claims based on EU law.[142]

6 SUMMARY

i. While early ECJ case law emphasized the autonomy and primary responsibility of the national legal system in the absence of EU harmonization of remedies, this approach has yielded over time to a stronger insistence on the effectiveness of EU law, and on effective judicial protection as a fundamental right.

ii. While certain strands of case law—mainly those in which the ECJ focuses on a particular substantive or remedial EU law right, often a right which is specified in EU legislation—require *specific* national remedies to be made available, many other cases continue to emphasize the primary responsibility of the national legal system, subject only to the principles of equivalence and effectiveness.

iii. Over time the Court has developed a highly context-specific balancing approach, which requires the importance of the EU right to be weighed against the scope and purpose of the national rule, taking all the circumstances of the case into account. And while the Court sometimes gives firm guidance on the requirements of effectiveness and equivalence, it often leaves it to the national court to assess and apply these to the facts of the case. This leads to considerable uncertainty about which national rules are likely to be accepted as legitimate and effective, and hence to a substantial continuing flow of litigation.

7 THE PRINCIPLE OF (STATE) LIABILITY FOR BREACH OF EU LAW

(A) ORIGINS OF THE PRINCIPLE

We have seen that despite its early 'no new remedies' rule in *Rewe-Handelsgesellschaft*, the ECJ in cases such as *San Giorgio* on the repayment of charges,[143] *Factortame I* on interim relief,[144] *Heylens* on judicial review,[145] *Muñoz* on civil remedies,[146] and *Courage* on damages,[147] required national courts in certain circumstances to ensure the availability of specific remedies.

However, the most distinctive of the Court's interventionist rulings which required the availability of a particular remedy as a matter of EU law is the *Francovich* judgment. This ruling established the principle of state liability to pay compensation for breach of EU law.

[141] Case C–445/06 *Danske Slagterior v Germany* [2009] ECR I–2119, [63]–[64]. Compare Case C–429/09 *Fuss v Stadt Halle*, 25 Nov 2010, [75]–[86].

[1991] ECR I–5357

[Note Lisbon Treaty renumbering: Art 5 EEC is now Art 4(3) TEU]

The applicants brought proceedings against Italy for the government's failure to implement Directive 80/987 on the protection of employees in the event of their employer's insolvency. No steps had been taken pursuant to the Directive to guarantee payment of wages owed by employers, and they argued that the state was liable to pay them the sums owed. The ECJ ruled that although the provisions of the Directive lacked sufficient precision to be directly effective, they nevertheless clearly intended to confer rights of which these individuals had been deprived through the state's failure to implement them.

THE ECJ

29. The national court thus raises the issue of the existence and scope of a State's liability for harm resulting from the breach of its obligations under Community law. . . .

(a) The existence of State liability as a matter of principle

30. It must be recalled first of all that the EEC Treaty has created its own legal system which is an integral part of the legal systems of the Member States and which their courts are bound to apply; the subjects of that legal system are not only the Member States but also their nationals. Just as it imposes obligations on individuals, Community law is also intended to create rights which become part of their legal patrimony; those rights arise not only where they are expressly granted by the Treaty but also by virtue of obligations which the Treaty imposes in a clearly defined manner both on individuals and on the Member States and the Community institutions: see Case 26/62 *Van Gend en Loos* and Case 6/64 *Costa* v. *ENEL*.

. . .

32. Furthermore, it has been consistently held that the national courts whose task it is to apply the provisions of Community law in cases within their jurisdiction must ensure that those rules have full effect and protect the rights which they confer on individuals: see in particular Case 106/77 *Simmenthal* and Case C–213/89 *Factortame*.

33. It must be held that the full effectiveness of Community rules would be impaired and the protection of the rights which they grant would be weakened if individuals were unable to obtain compensation when their rights are infringed by a breach of Community law for which a Member State can be held responsible.

34. The possibility of compensation by the Member State is particularly indispensable where, as in this case, the full effectiveness of Community rules is subject to prior action on the part of the State and consequently individuals cannot, in the absence of such action, enforce the rights granted to them by Community law before the national courts.

35. It follows that the principle of State liability for harm caused to individuals by breaches of Community law for which the State can be held responsible is inherent in the system of the Treaty.

36. Further foundation for the obligation on the part of Member States to pay compensation for such harm is to be found in Article 5 EEC, under which the Member States are required to take all appropriate measures, whether general or particular, to ensure fulfilment of their obligations under Community law. Among these is the obligation to nullify the unlawful consequences of a breach of Community law. . . .

Contrasting with its early statement that the Treaty did not intend to create new remedies,[148] the ECJ ruled that the principle of state liability is inherent in the Treaty, indicating that an action for compensation against the state for breach of EU law must be available.[149] *Francovich* also required the provision by national courts of a damages remedy for breach of an EU measure which lacked direct effect.[150] This represented an important additional move towards enhancing the effectiveness of unimplemented directives,[151] by presenting an alternative remedy for cases where national law could not otherwise be construed compatibly with an unimplemented directive.[152]

Despite the importance of the principle established, however, *Francovich* gave only minimal guidance for the future.[153] Three basic conditions were established for breaches involving a state's non-implementation of a *directive*: the conferral upon an individual of specific rights,[154] the content of which must be identifiable under the directive, and a causal link between the state's breach and damage to the individual.[155] For further conditions, the Court fell back on the familiar principle of national procedural autonomy.[156]

(B) CLARIFYING AND EXTENDING THE PRINCIPLE

An opportunity for clarification came in the joined cases of *Brasserie du Pêcheur* and *Factortame III*, in which a series of questions was referred from the German Bundesgerichtshof and the English High Court respectively. The judgment is detailed and deserves close reading.[157]

Cases C–46/93 and C–48/93 **Brasserie du Pêcheur SA v Germany, and R v Secretary of State for Transport, ex parte Factortame Ltd and Others** [1996] ECR I–1029

[Note Lisbon Treaty renumbering: Arts 5 and 164 EC are now Arts 4(3) and 19(1) TEU respectively and Arts 30, 52, 189, and 215 EC are now Arts 34, 49, 288, and 340 TFEU respectively]

The *Factortame* reference arose from the same factual background as *Factortame I* (above) and *II*, in which Spanish fishermen had invoked Article 52 EC to challenge the UK's conditions for registration

[148] Dougan argues that while the Court intended to develop a Community system of liability of public authorities and a right to reparation, it did not necessarily intend to create a specific 'Community remedy in damages': see 'The Francovich Right to Reparation: Reshaping the Contours of Community Remedial Competence' (2000) 6 EPL 103.

[156] Ibid [42]–[43].

[157] N Emiliou, Note (1996) 21 ELRev 399; Harlow (n 153); J Convery, 'State Liability in the UK after *Brasserie du Pêcheur*' (1997) 34 CMLRev 603; P Craig, 'Once More unto the Breach: The Community, the State and Damages Liability' (1997) 105 LQR 67; P Oliver, Note (1997) 34 CMLRev 635.

as a British vessel.[158] They sought damages for losses caused by the UK's breach of the Treaty. At the same time, in a case arising from litigation over Germany's beer purity laws, in which Germany had been found to be in breach of Article 30 EC, a French brewery which suffered losses when it was forced to cease exports to Germany sought compensation from the German state. It was argued before the ECJ that compensation should not be available for breach of directly effective EC law, since national remedies would already be available.

THE ECJ

19. That argument cannot be accepted.

20. The Court has consistently held that the right of individuals to rely on the directly effective provisions of the Treaty before national courts is only a minimum guarantee and is not sufficient in itself to ensure the full and complete implementation of the Treaty. . . . The purpose of that right is to ensure that provisions of Community law prevail over national provisions. It cannot, in every case, secure for individuals the benefit of rights conferred on them by Community law and, in particular, avoid their sustaining damage as a result of a breach of Community law attributable to a Member State. As appears from paragraph 33 of the judgment in *Francovich*, the full effectiveness of Community law would be impaired if individuals were unable to obtain redress when their rights were infringed by a breach of Community law.

. . .

22. It is all the more so in the event of an infringement of a right directly conferred by a Community provision upon which individuals are entitled to rely before the national courts. In that event, the right to reparation is the necessary corollary of the direct effect of the Community provision whose breach caused the damage sustained.

[*The ECJ rejected the German government's argument that a general right to reparation under Community law could be created only by legislation, and defended its own role as interpreter of the Treaty.*]

27. Since the Treaty contains no provisions expressly and specifically governing the consequences of breaches of Community law by Member States, it is for the Court, in pursuance of the task conferred on it by Article 164 of the Treaty of ensuring that in the interpretation and application of the Treaty, the law is observed, to rule on such a question in accordance with generally accepted methods of interpretation, in particular by reference to the fundamental principles of the Community legal system and, where necessary, general principles common to the legal systems of the Member States.

28. Indeed it is to the general principles common to the laws of the Member States that the second paragraph of Article 215 of the Treaty refers as the basis of the non-contractual liability of the Community for damage caused by its institutions or by its servants in the performance of their duties.

29. The principle of non-contractual liability of the Community expressly laid down in Article 215 of the Treaty is simply an expression of the general principle familiar to the legal systems of the member states that an unlawful act or omission gives rise to an obligation to make good the damage caused. That provision also reflects the obligation on public authorities to make good damage caused in the performance of their duties.

Rather than drawing only on the principle of effectiveness and on Article 4(3) TFEU (ex Article 10 EC), as it had done in *Francovich*, the ECJ here situated the principle of state liability in the context of the Treaty provisions on liability of EU institutions under Article 340 TFEU, which in turn are expressly based on the general principles common to the Member States. This reasoning seems intended to legitimate the development of the principle of state liability, ostensibly deriving it from well-established principles of the national legal orders rather than from the imagination of the ECJ.

[158] Case C–221/89 *R v Secretary of State for Transport, ex p Factortame* [1991] ECR I–3905, known as *Factortame II*.

Drawing on international law principles, and on its case law under Article 258 TFEU, the Court ruled that the state is liable whichever of its organs is responsible for the breach and regardless of the internal division of powers between constitutional authorities.[159] In later cases it added that Member States are not required to change the distribution of powers and responsibilities between public bodies, that reparation for damage caused within federal states does not have to be provided by the federal state,[160] and that states are permitted though not required to impose liability on individual officials responsible for the breach as well as on the state.[161]

In a notable development, the Court ruled in *Köbler* that the principle of state liability applies even to violations of EU law by national courts of final appeal. The case concerned the failure of the Austrian Verwaltungsgericht (Supreme Administrative Court) to refer to the ECJ the question whether a long-service increment for university professors which was restricted to professors who had spent fifteen years at an Austrian university was contrary to the Treaty provisions on free movement of workers. An earlier ruling of the ECJ on a similar question concerning the Austrian increment seemed to indicate that it would violate Article 45 TFEU, but in *Köbler* the Verwaltungsgericht adopted a new factual classification which it had rejected in the earlier case, ie, that the increment was a reward for loyalty which could be justified under Article 45.

Case C–224/01 **Gerhard Köbler v Republik Österreich**
[2003] ECR I–10239

33. In the light of the essential role played by the judiciary in the protection of the rights derived by individuals from Community rules, the full effectiveness of those rules would be called in question and the protection of those rights would be weakened if individuals were precluded from being able, under certain conditions, to obtain reparation when their rights are affected by an infringement of Community law attributable to a decision of a court of a Member State adjudicating at last instance.

34. It must be stressed, in that context, that a court adjudicating at last instance is by definition the last judicial body before which individuals may assert the rights conferred on them by Community law. Since an infringement of those rights by a final decision of such a court cannot thereafter normally be corrected, individuals cannot be deprived of the possibility of rendering the State liable in order in that way to obtain legal protection of their rights.

35. Moreover, it is, in particular, in order to prevent rights conferred on individuals by Community law from being infringed that under the third paragraph of Article 234 EC a court against whose decisions there is no judicial remedy under national law is required to make a reference to the Court of Justice.

36. Consequently, it follows from the requirements inherent in the protection of the rights of individuals relying on Community law that they must have the possibility of obtaining redress in the national courts for the damage caused by the infringement of those rights owing to a decision of a court adjudicating at last instance.

The ECJ dismissed a range of arguments by several governments which had intervened against the proposed application of state liability to the conduct of courts of last instance. These included arguments based on the principle of legal certainty, *res judicata*, the independence and authority of the

[159] R Davis, 'Liability in Damages for a Breach of Community Law: Some Reflection on the Question of Who to Sue and the Concept of "the State"' (2006) 31 ELRev 69.

[160] Case C–302/97 *Konle v Austria* [1999] ECR I–3099, [61]–[64]. The Court also ruled in Case C–424/97 *Haim v Kassenzahnärtztliche Vereinigung Nordrhein* [2000] ECR I–5123, [31]–[32] that in states without a federal structure reparation for damage caused to individuals can be made by a public law body legally distinct from the state, or an autonomous territorial body with delegated powers.

[161] Case C–470/03 *AGM-COS.MET Srl v Suomen valtio and Tarmo Lehtinen* [2007] ECR I–2749.

judiciary, and more practical problems like the absence of a competent national court to adjudicate on the conduct of a court of last instance.[162] The ECJ drew support for its conclusion that these would not exclude state liability for mistaken judicial decisions from the fact that under the ECHR system state reparation can be obtained for infringements of the Convention stemming from a decision of a national court of last instance. The *Köbler* ruling was later reinforced in *Traghetti del Mediterraneo*, where the ECJ condemned Italian legislation which sought substantially to restrict state liability for damage caused by a last instance court.[163]

Following *Brasserie du Pêcheur*, and particularly the reasoning in paragraph 22 of that judgment, the question arose whether liability to compensate for violation of EU law would be extended also to violations by *private* parties.[164] The issue arose in the competition law case of *Courage*. Having first reiterated its famous 'new legal order' reasoning from *Van Gend en Loos*, the ECJ emphasized the fundamental nature of the prohibition on anti-competitive agreements in Article 101 TFEU, breach of which would render any such agreement automatically void.

Case C–453/99 **Courage Ltd v Crehan**
[2001] ECR I–6297

[Note Lisbon Treaty renumbering: Arts 85 and 86 EC are now Arts 101 and 102 TFEU]

23. Thirdly, it should be borne in mind that the Court has held that Article 85(1) of the Treaty and Article 86 of the EC Treaty produce direct effects in relations between individuals and create rights for the individuals concerned which the national courts must safeguard…

…

25. As regards the possibility of seeking compensation for loss caused by a contract or by conduct liable to restrict or distort competition, it should be remembered from the outset that, in accordance with settled case-law, the national courts whose task it is to apply the provisions of Community law in areas within their jurisdiction must ensure that those rules take full effect and must protect the rights which they confer on individuals…

26. The full effectiveness of Article 85 of the Treaty and, in particular, the practical effect of the prohibition laid down in Article 85(1) would be put at risk if it were not open to any individual to claim damages for loss caused to him by a contract or by conduct liable to restrict or distort competition.

27. Indeed, the existence of such a right strengthens the working of the Community competition rules and discourages agreements or practices, which are frequently covert, which are liable to restrict or distort competition. From that point of view, actions for damages before the national courts can make a significant contribution to the maintenance of effective competition in the Community.

28. There should not therefore be any absolute bar to such an action being brought by a party to a contract which would be held to violate the competition rules.

The *Courage* case, bolstered by the subsequent *Manfredi* judgment,[165] is significant in requiring that national law must provide an action for damages against a private party for breach of the Treaty

[162] Case C–224/01 [2003] ECR I–10239, [37]–[50]; C. Classen, Note (2004) 41 CMLRev 813.

competition law rules,[166] but the extent to which it extends beyond competition to other Treaty provisions such as those on free movement or discrimination remains uncertain.[167]

(c) THE CONDITIONS FOR STATE LIABILITY

Having affirmed the basic principle of state liability, the ECJ in *Brasserie du Pêcheur* then elaborated on the conditions for liability, drawing on Article 340 TFEU governing liability of the EU institutions. In the Court's words, the conditions under which states incur liability for breach of EU law cannot differ from those governing the liability of the EU in similar circumstances.[168]

Cases C–46 and 48/93 **Brasserie du Pêcheur SA v Germany**
[1996] ECR I–1029

[Note Lisbon Treaty renumbering: Arts 189 and 215 EC are now Arts 288 and 340 TFEU]

43. The system of rules which the Court has worked out with regard to Article 215 of the Treaty, particularly in relation to liability for legislative measures, takes into account, inter alia, the complexity of the situations to be regulated, difficulties in the application or interpretation of the texts and, more particularly, the margin of discretion available to the author of the act in question.

44. Thus, in developing its case-law on the non-contractual liability of the Community, in particular as regards legislative measures involving choices of economic policy, the Court has had regard to the wide discretion available to the institutions in implementing Community policies.

45. The strict approach taken towards the liability of the Community in the exercise of its legislative activities is due to two considerations. First, even when the legality of measures is subject to judicial review, exercise of the legislative function must not be hindered by the prospect of actions for damages whenever the general interest of the Community requires legislative measures to be adopted which may adversely affect individual interests. Second, in a legislative context characterized by the exercise of a wide discretion, which is essential for implementing a Community policy, the Community cannot incur liability unless the institution concerned has manifestly and gravely disregarded the limits on the exercise of its powers.

46. That said, the national legislature—like the Community institutions—does not systematically have a wide discretion when it acts in a field governed by Community law. Community law may impose upon it obligations to achieve a particular result or obligations to act or refrain from acting which reduce its margin of discretion, sometimes to a considerable degree. This is so, for instance, where, as in the circumstances to which the judgment in *Francovich* relates, Article 189 of the Treaty places the Member State under an obligation to take, within a given period, all the measures needed in order to achieve the result required by a directive. In such a case, the fact that it is for the national legislature

[166] The Commission followed up with a White Paper on Damages for Breach of the EC Antitrust Rules, COM(2008)165.

[167] W van Gerven, 'Crehan and the Way Ahead' (2006) 17 EBLR 269; S Drake, 'Scope of Courage and The Principle of "Individual Liability" for Damages' (2006) 26 ELRev 841; N Reich, 'Horizontal Liability in EC Law: Hybridization of Remedies for Compensation in Case of Breach of EC Rights' (2007) 44 CMLRev 705; F Marcos and A Sánchez Graells, 'Towards a European Tort Law? Damages Actions for Breach of EC Antitrust Rules' (2008) ERPL 469; K Apps, 'Damages claims against Trade Unions after Viking and Laval' (2009) 34 ELRev 141; R Nazzini, 'Potency and Act of the Principle of Effectiveness: the Development of Competition Law Remedies and Procedures in Community Law' in C Barnard and O Odudu (eds), *Outer Limits of European Union Law* (Hart, 2009).

[168] The ECJ however indicated that national law could, if so desired, set stricter liability conditions: see [66], and also Case C–524/04 *Thin Cap* (n 11) [115] and Case C–429/09 *Fuss* (n 141).

to take the necessary measures has no bearing on the Member State's liability for failing to transpose the directive.

47. In contrast, where a Member State acts in a field where it has a wide discretion, comparable to that of the Community institutions in implementing Community policies, the conditions under which it may incur liability must, in principle, be the same as those under which the Community institutions incur liability in the comparable situation.

...

51. In such circumstances, Community law confers a right to reparation where three conditions are met: the rule of law infringed must be intended to confer rights on individuals; the breach must be sufficiently serious; and there must be a direct causal link between the breach of the obligation resting on the State and the damage sustained by the injured parties.

...

53. ...Those conditions correspond in substance to those defined by the Court in relation to Article 215 in its case-law on liability of the Community for damage caused to individuals by unlawful legislative measures adopted by its institutions.

...

55. As to the second condition, as regards both Community liability under Article 215 and Member State liability for breaches of Community law, the decisive test for finding that a breach of Community law is sufficiently serious is whether the Member State or the Community institution concerned manifestly and gravely disregarded the limits on its discretion.

56. The factors which the competent court may take into consideration include the clarity and precision of the rule breached, the measure of discretion left by that rule to the national or Community authorities, whether the infringement and the damage caused was intentional or involuntary, whether any error of law was excusable or inexcusable, the fact that the position taken by a Community institution may have contributed towards the omission, and the adoption or retention of national measures or practices contrary to Community law.

57. On any view, a breach of Community law will clearly be sufficiently serious if it has persisted despite a judgment finding the infringement in question to be established, or a preliminary ruling or settled case law of the Court on the matter from which it is clear that the conduct in question constituted an infringement.

In *Brasserie* the ECJ suggested that the national authorities must have known that the German beer designation rules were in breach of EU law given earlier ECJ rulings to this effect.[169] The Court also indicated that while the existence of a prior ECJ ruling finding an infringement of EU law would suggest that a subsequent similar infringement constitutes a sufficiently serious breach, such a ruling would not be *necessary* to establish a sufficiently serious breach.[170] Similarly, parts of the Merchant Shipping Act's conditions for registration were *prima facie* incompatible with EU law, whereas others might have appeared to be capable of justification.[171] In assessing the question of 'sufficient seriousness' the UK court was encouraged to consider the existing legal disputes over the common fisheries policy,

[169] The referring German court, upon receiving the ECJ's ruling in *Brasserie du Pêcheur*, ultimately awarded no damages at all to the plaintiffs even as regards the provisions governing the designation '*bier*', on the basis that there had been no direct causal connection between Germany's sufficiently serious breach and the damage suffered: see [1997] 1 CMLR 971. See Oliver (n 157) 657; E Deards, Note (1997) 22 ELRev 620.

[170] Cases 46 and 48/93 *Brasserie du Pêcheur* (n 135) [91]–[95]. Indeed, the *Danske Slagterior* ruling (n 141) indicates that litigants should not wait for an ECJ ruling under Art 258 TFEU before bringing a *Francovich*-type action for damages, and that national law is not required to provide for a suspension of the time limit for an action in damages while the ECJ ruling is awaited.

[171] The House of Lords ultimately upheld the finding of the Divisional Court and Court of Appeal that the breach was sufficiently serious to give rise to liability in damages. For the domestic judgments on this issue see [1997] Eu LR 475, [1998] 1 All ER 736, [1999] All ER 640 (CA), [2000] 1 AC 524 (HL), and finally the Div Ct ruling in [2001] 1 WLR 942.

the fact that the Commission had made its attitude known in good time to the UK, and 'the assessments as to the state of certainty of EU law made by the national courts in the interim proceedings brought'.[172] The ECJ indicated that the question of causation of damage was ultimately for the national courts to decide,[173] although in later cases it has given clear legal guidance as to causation.[174]

On the crucial question of the *standard* of liability, while the ECJ did not respond directly to a question from the German government on the meaning of 'fault', the Court made clear that the concept of 'sufficiently serious breach', which arguably carries connotations of fault, was all that could be required by domestic law:[175] this position was strongly affirmed by *Köbler* and *Traghetti* concerning state liability arising from the action of national courts. In *Köbler* the ECJ ruled that, regard being had to 'the specific nature of the judicial function' and the legitimate requirements of legal certainty,[176] state liability in cases of judicial breach was governed by the same conditions (conferral of rights on individuals, a sufficiently serious breach, and a causal link between the state's breach and damage to the individual) and by the same standard of liability as any other state violation of EU law. As far as the standard is concerned, liability can be incurred only 'in the exceptional case where the court has manifestly infringed the applicable law'.[177] The ECJ in *Köbler* repeated the content of paragraphs 56 and 57 of *Brasserie du Pêcheur*, but added one further indicator of manifest breach by a national court of last instance: non-compliance by the court in question with its obligation to make a preliminary reference to the ECJ.

In *Traghetti del Mediterraneo*, Italian legislation sought to restrict state liability arising from damage caused by a last instance court by excluding liability where the infringement was the result of an interpretation of law or an assessment of facts or evidence, and by limiting liability solely to cases of intentional fault and serious misconduct by the national court.[178] The ECJ rejected the claim that the impugned legislation struck a fair balance between effective judicial protection and legal certainty and the independence of the judiciary. On the requirement of showing intentional fault and serious misconduct by the national court, the ECJ ruled:

> [A]lthough it remains possible for national law to define the criteria relating to the nature or degree of the infringement which must be met before State liability can be incurred for an infringement of Community law attributable to a national court adjudicating at last instance, under no circumstances may such criteria impose requirements stricter than that of a manifest infringement of the applicable law, as set out in paragraphs 53 to 56 of the *Köbler* judgment.[179]

Similarly, the exclusion of liability for an interpretation of law or assessment of facts or evidence by the national court of last instance 'would render meaningless' the principle laid down in *Köbler,* since a manifest infringement of EU law could readily arise from either of these two kinds of judicial activity, especially when carried out by a court of last instance.[180]

[179] Ibid [44].

[180] Ibid [34]–[40].

On the facts of *Köbler,* the ECJ ruled that although it was normally for the national court to apply the law to the facts of the case, it had enough information in this case to give guidance on whether the conditions for state liability were fulfilled.[181] The issue was whether the Austrian Verwaltungsgericht had 'manifestly infringed' EU law by failing to re-refer the question of the compatibility of a long-service increment with Article 45 TFEU to the ECJ. The Verwaltungsgericht had initially referred the question to the ECJ, but had subsequently withdrawn it on the suggestion of the ECJ registrar, who assumed it had been resolved in Professor Köbler's favour by the earlier *Schöning-Kougebetopoulou*[182] ruling, which had found a similar long-service increment to be incompatible with Article 45 TFEU. However, the Verwaltungsgericht then decided to re-classify the long-service increment as a loyalty bonus under national law, possibly in order to avoid the application of the *Schöning-Kougebetopoulou* ruling. The ECJ nonetheless took a benign view of the action of the Verwaltungsgericht and ruled that in failing to re-refer the question under Article 267 TFEU,[183] its infringement of EU law was not sufficiently manifest to attract state liability.[184]

In *British Telecom*,[185] the ECJ agreed that the UK had mis-implemented a public procurement directive, but concluded that it did not amount to a 'sufficiently serious breach' since the provision was not clear and precise, the UK's interpretation was made in good faith and in keeping with the aims and wording of the directive, and no guidance had been available from past rulings of the ECJ or the Commission. A similar ruling was given in *Denkavit*, in relation to the incorrect transposition by Germany of a company taxation directive, where almost all other Member States had adopted the same interpretation of the directive as Germany and there was no existing case law on the provision concerned.[186] Other rulings have followed suit.[187]

Where EU law leaves considerable discretion to the national authorities, state liability will depend on a finding of manifest and grave disregard for the limits of that discretion.[188] Conversely, in *Dillenkofer,*[189] concerning Germany's failure to implement the Package Holidays Directive 90/314, the ECJ ruled that *Francovich* had established that non-transposition of a directive within the prescribed time limit *of itself* amounted to a sufficiently serious breach.[190] Similarly in *Lomas*, the refusal of the UK to grant export licences for live sheep to Spain, on the ground that Spanish slaughterhouses were not complying with the terms of an EU directive, constituted a sufficiently serious breach, given the lack of discretion left to states under the directive, the clarity of the Treaty provision breached, and the absence of a properly verified justification.[191] Similar rulings were given in *AGM-COS.MET*[192] and *Synthon BV*[193] in which there was no room for state discretion.[194]

[182] Case C–15/96 *Kalliope Schöning-Kougebetopoulou v Freie und Hansestadt Hamburg* [1998] ECR I–47.

[183] Interestingly, although the provision of EU law violated by the Austrian court was Art 267 TFEU (ex Art 234 EC), the provision which the ECJ analysed in order to determine whether the first condition of liability (conferral of rights on individuals) was satisfied was Art 45 TFEU (ex Art 39 EC), on the free movement of workers.

(D) STATE LIABILITY AND THE NATIONAL REMEDIAL FRAMEWORK

While *Brasserie du Pêcheur/Factortame III* provided some guidance on the conditions governing state liability, many issues were left to be governed by national law, subject to the familiar principles of equivalence and effectiveness.[195] In other words, while the core conditions of the principle of (state) liability for breach of EU law are determined by EU law,[196] the action for compensation is provided within the framework of domestic legal systems, with varying procedural and substantive rules on matters such as time limits, causation, mitigation of loss, and assessment of damages.[197]

Concerning the *effectiveness* principle, the ECJ in *Brasserie/Factortame* ruled that German law limiting the liability of the state exercising its legislative function, and English law requirements such as 'abuse of power' or proof of misfeasance in public office, would make it excessively difficult to obtain reparation. Concerning the extent of reparation, the Court ruled that 'reparation for loss or damage caused to individuals as result of breaches of Community law must be commensurate with the loss or damage sustained'.[198] This requirement of commensurability is strong, recalling the ruling in *Marshall II*,[199] and any restrictions imposed on the extent of damages available must be reasonable. Rules on mitigation of loss are acceptable,[200] but the total exclusion of loss of profits or the restriction of damages to certain specific interests such as property,[201] or the imposition of restrictive additional conditions for the recovery of losses other than property,[202] would violate the effectiveness principle.[203] Although the ECJ rejected the German government's request for a temporal limit on the effects of the *Brasserie* ruling, the Court indicated that Germany could take account, within the framework of its *national* law on liability, of temporal concerns such as the principle of legal certainty.[204]

Certain other restrictive conditions on the action for damages have been held to be contrary to the principle of effectiveness, such as the provision making a public sector worker's right to reparation for the damage suffered due to the state's infringement of the EU Working Time Directive conditional on a prior application having been made to his employer in order to secure compliance with that provision.[205] In a trilogy of Italian cases concerning claims arising out of the *Francovich* litigation, the compatibility of national provisions restricting the availability of compensation for the state's prior

[195] For interesting comparative discussions of the procedural conditions prevailing in different Member States see C Kremer, 'Liability for Breach of EC Law' (2003) 22 YBEL 203; H Xanathi, 'Effective Judicial Protection at the National Level Against Breaches of EC Law' (2005) 5 EJLR 409.

[196] Case C–300/04 *Eman* (n 125) [70].

[197] In Case C–228/98 *Dounias* (n 103) the exceptional availability of witness evidence in proceedings to establish state liability was deemed compatible with the principles of equivalence and effectiveness. See also Case C–118/00 *Larsy* (n 191).

[198] Cases 46 and 48/93 (n 135) [82]. In Case C–429/09 *Fuss* (n 141), the ECJ ruled that it was for national law, subject to the requirements of effectiveness and equivalence, to determine whether reparation should consist of time off in lieu rather than financial compensation, and to lay down the method for calculating the reparation.

[199] Case C–271/91 *Marshall v Southampton and South-West Hampshire Area Health Authority II* [1993] ECR I–4367.

[200] Case C–445/06 *Danske Slagterior* (n141).

[201] Cases 46 and 48/93 *Brasserie du Pêcheur* (n 135) [84]–[88].

[202] Case C–470/03 *AGM* (n 192) [90]–[96] concerning a Finnish rule subjecting the right to compensation for damage other than damage to persons or property to the condition that the damage result either from a criminal offence or from the exercise of public authority, or there are 'especially serious reasons' for awarding compensation.

[203] On mitigation of loss and economic loss in general see Case C–410/98 *Metallgesellschaft* (n 57) [91]; Cases C–295–298/04 *Manfredi* (n 29). As regards exemplary damages in English law, the ECJ in *Brasserie du Pêcheur* ruled that such an award could not be ruled out in the case of the state's breach of EU law in similar circumstances to those which would give rise to an award in an action founded on domestic law: Cases 46 and 48/93 *Brasserie du Pêcheur* (n 135) [89].

[204] Cases 46 and 48/93 *Brasserie du Pêcheur* (n 135) [98].

[205] Case C–429/09 *Fuss* (n 141).

breach of EU law arose.[206] This breach was the failure to implement Directive 80/987 on the protection of employees following their employer's insolvency, and the ECJ found various provisions of the legislation limiting the period from which wage claims could be made to be excessively restrictive.[207]

Concerning the principle of *equivalence*, the ECJ in *Palmisani* left it to the national court to decide whether the one-year time limit set by Italian legislation for a claim for compensation for failure to implement Directive 80/987 was in compliance with the equivalence principle.[208] The general time limit for cases of non-contractual liability brought under the Italian Civil Code was five years, and the ECJ distinguished between claims for wages under the national law implementing the Directive (a social security benefit) and claims for damages for loss caused by the late implementation of the Directive, which were governed by the Italian compensation scheme set up by the later measure (compensation for the state's non-implementation). For this reason, it might be inappropriate to compare the time limit for actions under the compensation scheme with the time limit for social security claims in national law, rather than with the ordinary system of non-contractual liability.[209] Ultimately, the Italian court was left to decide the issue of 'equivalence', although the ECJ suggested that this principle might have been violated by the legislation at issue.[210] In *Transportes Urbanos,* on the other hand, the requirement of exhaustion of domestic remedies before bringing a claim in damages for breach of EU law was clearly considered by the ECJ to violate the equivalence principle, since it did not apply to claims in damages for breach of the domestic Constitution.[211]

(E) STATE LIABILITY AS A RESIDUAL REMEDY?

What advantages are there for an individual to choose the EU-mandated action for compensation rather than another existing national remedy to enforce EU law?[212]

There was some suggestion in cases like *Société Comateb*[213] and *Sutton*[214] that where a national remedy is unsatisfactory due to the existence of a legitimate national procedural restriction, an

[206] Cases C–94–95/95 *Bonifaci and Berto v IPNS* [1997] ECR I–3969; Case C–261/95 *Palmisani* (n 124); Case C–373/95 *Maso and Gazzetta v IPNS* [1997] ECR I–4051; Dougan (n 148).

[207] The Court also ruled that while retroactive application of the measures adopted should be sufficient to ensure the adequacy of reparation, this would not necessarily be so if employees could demonstrate otherwise: Cases C–94–95/95 *Bonifaci and Berto* (n 206) [51]–[53]. See also Case C–373/95 *Maso and Gazzetta* (n 206) [58]–[59], in which the Court ruled that although national rules against aggregation of benefits were in principle permissible, they could not cover benefits such as jobseeker's allowances which arose after termination of employment and would not have overlapped with the unpaid wages.

[208] Case C–261/95 (n 124).

[212] Oliver (n 157) and Deards (n 169) question whether the action for damages may be made subsidiary to other national remedies. For detailed discussion see G Anagnostraras, 'State Liability and Alternative Courses of Action: How independent Can an Autonomous Remedy Be?' (2002) 21 YBEL 355.

[213] Cases C–192–218/95 *Comateb* (n 29) concerning the principle of unjust enrichment as a barrier to the repayment of charges wrongly levied. There is an extensive case law on repayment of charges and the defence of 'passing on' the cost of charges to consumers. For further discussion see Dougan (n 13). Compare *Comateb*, where the ECJ accepted the compatibility in principle of such an unjust enrichment rule with the effectiveness principle with Case C–147/01 *Weber's Wine World* (n 126) where the ECJ ruled that a *presumption* of unjust enrichment, on the sole basis that the charge was passed on to third parties, would make the exercise of EU rights excessively difficult in practice. See also Case C–309/06 *Marks & Spencer* (n 11) on *partial* passing-on, and three groups of Test Claimants cases: Case C–201/05 *CFC* (n 11); Case C–524/04 *Thin Cap* (n 11); Case C–446/04 *FII Group Litigation* (n 11). For a case on the topic brought by the Commission against a Member State, rather than by an affected individual, see Case C–129/00 *Commission v Italy* [2003] ECR I–14637.

[214] Case C–66/95 *Sutton* (n 37), concerning the non-availability of interest on arrears of social security owed under Dir 79/7. Similarly in Case C–90/96 *Petrie v Università degli Studi di Verona et Camilla Bettoni* [1997] ECR I–6525, the

action in damages against the state might provide an alternative remedy which is not affected by that particular restrictive national rule. In each case, having conceded that restrictions on the availability of national remedies were potentially legitimate, the ECJ went on to consider the possible liability of the state in damages.[215] One reading of the cases is that they assume that a *Francovich*-style action for compensation may prove to be a more effective remedy than others available under national law. This assumption has, however, been criticized on the basis that an action based on *Francovich* requires the establishment of additional onerous conditions, such as a sufficiently serious breach and causation of loss.[216]

On the other hand the ECJ in *Stockholm Lindöpark* rejected the argument that the availability of a *Francovich*-style action for damages should be precluded by the fact that a separate action under national law could be based on the direct effect of EU law.[217] And in *Wells*, the ECJ left it to the national court to decide which kind of remedy would be available and appropriate for a violation of EU environmental impact assessment law.[218] While EU law imposed an obligation on Member States to 'nullify the unlawful consequences of a breach of Community law', it was for the national court to determine whether a planning consent unlawfully granted could be revoked, or whether instead the individual affected could claim compensation for harm suffered.[219] In *Transportes Urbanos*, the ECJ was asked whether EU law permitted a national rule requiring prior exhaustion of domestic remedies before bringing an action for state liability in damages for breach of EU law.[220] The ECJ found on the facts of the case that the principle of equivalence was violated, since the exhaustion of remedies rule did not apply to actions for damages for breach of the national constitution, but it expressly left open the question whether such a prior exhaustion rule would violate the effectiveness principle in a case where there was equivalence between the treatment of damages actions based on EU law and national constitutional law.

According to Prechal (now a judge on the ECJ), state liability for breach of EU law is indeed 'a sort of residual remedy… a second rank alternative' to the direct or indirect effect of EU rights and their enforcement at national level.[221] She suggests that EU law may even require litigants, as a way of mitigating their loss, to rely first on the direct or indirect effect of an EC right before seeking state compensation. Case law since *Francovich*, in her view, confirms the subsidiary and complementary character of state liability as a kind of 'safety net' where other devices fail. Dougan also argues that the ECJ tends to use state liability as a cure for inadequate domestic remedies.[222] These commentators question whether the tendency of the ECJ to present state liability as a panacea where national remedies are lacking might even have the effect of lowering the effectiveness of national protection.

ECJ ruled that although applicants for teaching posts who had been subject to an unlawful discriminatory condition could not insist that they must be eligible for appointment to these posts under national law, that did not mean that they could not seek compensation under the conditions laid down in *Brasserie du Pêcheur*.

[215] Case C–261/95 *Palmisani* (n 124) also lends some support to the hypothesis that for example an action for damages against the state for loss caused by the mis-implementation of a dir would also have to include loss caused by the effluxion of time, even where such loss could not be recovered as interest in an action for repayment of arrears under national law.

[216] Dougan (n 148).

[217] Case C–150/99 *Stockholm Lindöpark* (n 191) [35].

8 CONCLUSIONS

i. Responding to the lack of a harmonized system of EU remedies, the ECJ's intervention to stimulate incremental national procedural alignment has prompted differing reactions. Some applaud the Court for treading a difficult path between the need to respect national legal autonomy, and the competing need to promote effective enforcement of EU law.

ii. Others caution against the effects of such reactive, *ad hoc*, and haphazard judicial lawmaking and argue for a more systematic, politically legitimate, and carefully considered political approach to the effectiveness of EU law and the creation of an EU system of procedures and remedies.[223] Yet, given the difficulty of attempting legislative harmonization or even coordination in these fields, it has been suggested that incremental reform through the Court's case law may in some respects be desirable.[224]

iii. It has also been argued that remedial harmonization may simply be a task for which the ECJ is inherently unsuited.[225] The contribution of the ECJ's case law in most sectors has been described as promoting a form of negative rather than positive harmonization, setting limits and boundaries for national systems rather than prescribing harmonized solutions.[226] Even in more densely integrated sectors such as competition law and state aid, judicially-led harmonization has been described as minimum rather than full harmonization.

iv. The lack of EU legislative activity may reflect a clear political objection on the part of Member States to harmonizing or even coordinating domestic procedures in this respect, or it may simply reflect the difficulty, complexity, and ambition of the task which would be involved.[227]

v. Member States may also be resistant to the prospect of EU interference—whether legislative or judicial—with their systems of private law, which reflect implicit but fundamental social and cultural choices.[228] Nonetheless, the intense activity in recent years to activate the EU's 'area of freedom, security and justice', including coordination of civil procedural law across the Member States, may indicate a shift in this respect.[229] While remedial 'harmonization' in its strong form may be off the agenda, other more gradual forms of mutual alignment may well emerge.

THE RELATIONSHIP BETWEEN EU LAW AND NATIONAL LAW: SUPREMACY

1 CENTRAL ISSUES

i. The doctrine of supremacy of EU law had no formal basis in the Treaty, but was developed by the ECJ on the basis of its conception of the 'new legal order'.

ii. The ECJ ruled that the aim of creating a uniform common market between different states would be undermined if EU law could be made subordinate to national law of the various states.

iii. The validity of EU law can therefore, according to the ECJ, never be assessed by reference to national law. National courts are required to give immediate effect to EU law, of whatever rank, in cases which arise before them, and to ignore or to set aside any national law, of whatever rank, which could impede the application of EU law.

iv. Thus, according to the ECJ, any norm of EU law takes precedence over any provision of national law, including the national constitutions.

v. The requirement to 'set aside' conflicting national law does not entail an obligation to nullify national law, which may continue to apply in any situation which is not covered by a conflicting provision of EU law.

vi. Most national courts do not accept the unconditionally monist view of the ECJ as regards the supremacy of EU law. While they accept the requirements of supremacy in practice, most regard this as flowing from their national constitutions rather than from the authority of the EU Treaties or the ECJ, and they retain a power of ultimate constitutional review over measures of EU law.

2 FIRST DIMENSION: SUPREMACY FROM THE ECJ'S PERSPECTIVE

(A) FOUNDATIONS

The EEC Treaty contained no provision dealing with the supremacy of Community law over national law. A supremacy clause was incorporated in the Constitutional Treaty, and a Declaration on primacy has now been included in the Lisbon Treaty, the effect of which will be considered

below. Notwithstanding the absence of any explicit provision in the Rome Treaty, the ECJ enunciated its vision of supremacy in the early years of the Community's existence. It touched on the issue in *Van Gend en Loos*[1] when it stated that the Community constituted a new legal order of international law for the benefit of which the states had limited their sovereign rights, but the ECJ's primary focus was on direct effect. The supremacy doctrine was however at the forefront of the decision in *Costa*.

Case 6/64 **Flaminio Costa v ENEL**
[1964] ECR 585, 593

[Note Lisbon Treaty renumbering: Arts 5, 7, 177, and 189 are now Arts 4(3) TEU, 18, 267, and 288 TFEU]

THE ECJ

By contrast with ordinary international treaties, the EEC Treaty has created its own legal system which, on the entry into force of the Treaty, became an integral part of the legal systems of the Member States and which their courts are bound to apply.

By creating a Community of unlimited duration, having its own institutions, its own personality, its own legal capacity and capacity of representation on the international plane and, more particularly, real powers stemming from a limitation of sovereignty or a transfer of powers from the States to the Community, the Member States have limited their sovereign rights, albeit within limited fields, and have thus created a body of law which binds both their nationals and themselves.

The integration into the laws of each Member State of provisions which derive from the Community, and more generally the terms and the spirit of the Treaty, make it impossible for the states, as a corollary, to accord precedence to a unilateral and subsequent measure over a legal system accepted by them on the basis of reciprocity. Such a measure cannot therefore be inconsistent with that legal system. The executive force of Community law cannot vary from one State to another in deference to subsequent domestic laws, without jeopardizing the attainment of the objectives of the Treaty set out in Article 5(2) and giving rise to the discrimination prohibited by Article 7.

The obligations undertaken under the Treaty establishing the Community would not be unconditional, but merely contingent, if they could be called into question by subsequent legislative acts of the signatories. . . .

The precedence of Community law is confirmed by Article 189, whereby a regulation 'shall be binding' and 'directly applicable in all Member States'. This provision, which is subject to no reservation, would be quite meaningless if a State could unilaterally nullify its effects by means of a legislative measure which could prevail over Community law.

It follows from all these observations that the law stemming from the Treaty, an independent source of law, could not, because of its special and original nature, be overridden by domestic legal provisions, however framed, without being deprived of its character as Community law and without the legal basis of the Community itself being called into question.

The transfer by the states from their domestic legal system to the Community legal system of the rights and obligations arising under the Treaty carries with it a permanent limitation of their sovereign rights, against which a subsequent unilateral act incompatible with the concept of the Community cannot prevail.

[1] Case 26/62 *NV Algemene Transport- en Expeditie Onderneming van Gend en Loos v Nederlandse Administratie der Belastingen* [1963] ECR 1.

The ECJ deployed a number of arguments to justify its conclusion that EU law should be accorded supremacy over national law.[2]

First, there is what may be termed a contractarian argument. The essence of this argument is that EU law should be accorded primacy because it flowed from the agreement made by the Member States when they joined the EU. We see this argument in the ECJ's statement that the Treaty created its own legal order which immediately became 'an integral part' of the legal systems of the Member States. The argument is more explicit in the ECJ's statement that the Member States transferred to the new Union institutions 'real powers stemming from a limitation of sovereignty' and thereby limited their sovereign rights. The Court however made no reference to the constitution of any particular Member State to see whether such a transfer or limitation of sovereignty was contemplated, or was possible in accordance with that constitution.

A second aspect of the judgment is more functional in nature, capturing the idea that the very aims of the Treaty could not be achieved unless primacy were accorded to EU law. Thus the Court states that the aims of the Treaty were integration and cooperation, and their achievement would be undermined by one Member State refusing to give effect to a Union law which should uniformly and equally bind all. This pragmatic and purposive argument has been deployed repeatedly by the ECJ: that securing the uniformity and effectiveness of EU law is necessary if the concrete aims set out in the Treaties are to be realized.

A third argument evident in the judgment is analytical in nature: the obligations undertaken by the Member States in the Treaty would be 'merely contingent' rather than unconditional if they were to be subject to later legislative acts on the part of the states. Thus the ECJ adverts to what is now Article 288 TFEU, which provides that regulations are directly applicable, and concludes that this would be meaningless if states could negate the effect of EU law by subsequent inconsistent legislation. Yet this textual argument is of limited efficacy, since Article 288 refers only to the direct applicability of regulations, while the Court sought to establish a general principle of the supremacy of all binding EU law. Moreover, direct applicability refers to the way in which Union law becomes part of the national legal system without the need for implementing measures, but does not resolve the priority between this law and other forms of national law.

What comes across most strongly is the teleological rather than textual approach in the Court's judgment, with emphasis placed on the aims of the EU and the spirit of the Treaties. The Court's decision was a bold step to support its conception of the legal order by asserting that the states had limited their powers and had transferred sovereignty to the Union institutions.

(B) RELATION WITH DIRECT EFFECT

It is important before pressing further to understand the relationship between supremacy and direct effect. The ambiguities in the meaning of direct effect were considered in a previous chapter,[3] and these are relevant to the relationship between supremacy and direct effect. The key issue is whether direct effect is a condition precedent for EU law to have supremacy over national law. Consider in this respect Dougan's insightful analysis.

[2] Several of these arguments were used by the Procureur Général before the Belgian Cour de Cassation in *Minister for Economic Affairs v SA Fromagerie Franco-Suisse 'Le Ski'* [1972] 2 CMLR 330, where he successfully persuaded the court that the supremacy of Community law over Belgian law should be acknowledged.

[3] Ch 7.

M Dougan, When Worlds Collide! Competing Visions of the Relationship between Direct Effect and Supremacy[4]

The 'primacy' model treats primacy or supremacy as a 'constitutional fundamental' of the European Union, permeating all relations between national law and Community law . . . Its basic outlines can be summarized as follows.

Supremacy is capable of producing certain legal effects within the national legal systems, independently of the principle of direct effect, and without reference to the latter's threshold criteria (such as the need for the relevant Community norm to be clear, precise and unconditional). In particular the principle of supremacy is capable, in itself, of producing *exclusionary effects* within the domestic legal order—understood as the setting aside of national rules that are incompatible with a (by definition) hierarchically superior norm of Community law . . . For these purposes the principle of direct effect is neither necessary nor even relevant: its threshold criteria have no particular function to perform, since the question is not whether the relevant Community norm is clear, precise and unconditional; but merely whether there exists an incompatibility between a rule of Community law and a rule of national law.

However . . . that is conceptually distinct from the phenomenon of *substitutionary effects*—understood as the direct and immediate application of Community law, so as to create rights or obligations derived from the EC Treaty, which did not already exist in the national legal system. This is the proper domain of direct effect: here the threshold criteria of clarity, precision and unconditionality serve to identify which norms of Community law are apt for direct and immediate application in the national legal system, (although supremacy still has a role to play, of course, should national law prove incompatible with the novel rights or obligations just deduced from the relevant Community measure). Unsurprisingly this 'primacy' model thus aligns supremacy with notions of invocability and judicial review over the validity of national law; whereas direct effect is more closely associated with the creation and enforcement of subjective individual rights.

By contrast, the 'trigger' view sees supremacy, at the outset, as little more than a remedy to be administered by the domestic courts in the resolution of disputes involving Community law . . . .

In particular, the practical remedy afforded by supremacy is available in those individual cases involving a conflict between Community law and national law; but that remedy can only be invoked when Community law has been rendered cognizable before the domestic courts, by satisfying the threshold criteria for enjoying direct effect. Under this model, direct effect encompasses not only the creation and enforcement of subjective individual rights, but any situation in which Community norms produce independent effects within the national legal systems . . .

The important point, for present purposes, is that direct effect enjoys a monopoly over rendering Community norms justiciable before the national courts; its threshold criteria act as a trigger, and thus a necessary precondition, for the principle of supremacy. The 'primacy' model, by postulating the free-standing potency of the supremacy principle in situations demanding no more than the exclusionary effect of Treaty norms, seems to short-circuit this entire theoretical framework.

Four points can be made about the relationship between supremacy and direct effect in the light of this analysis.

First, in terms of positive law, it is clear that the primacy model best explains the case law on incidental horizontal effect considered above.[5] Supremacy has been used to exclude national law that is inconsistent with EU law, even though the EU provision does not have horizontal direct effect

[4] (2007) 44 CMLRev 931, 932–935. Italics in the original.
[5] 207–210.

as between the parties to the case. The very distinction between exclusion and substitution effect is however problematic for the reasons explained in the earlier analysis.[6]

Secondly, in terms of positive law, the distinction between the two models was important more generally pre-Lisbon because direct effect did not exist in relation to what were the Second and Third Pillars. This prompted inquiry as to whether supremacy could operate in these areas in the absence of direct effect. The ECJ applied the principle of indirect effect to the Third Pillar in *Pupino*,[7] but never conclusively answered the supremacy issue. Arguments were made premised on the primacy model to suggest that supremacy could operate in the Second and Third Pillars, even in the absence of direct effect.[8] The issue is no longer a live one insofar as the Third Pillar has been folded into the main fabric of the Treaties, and hence the normal principles of direct effect can apply in this area. While the Second Pillar dealing with Common Foreign and Security Policy no longer formally exists, the rules that apply to the CFSP are distinct. The relationship between direct effect and supremacy in this area is therefore still a live one.[9]

Thirdly, in conceptual terms, it should be recognized that whether a provision is intended to accord rights to individuals in the strict sense of being sufficiently clear, precise, and unconditional is conceptually distinct from the issue of supremacy. There is nothing odd in principle with an EU norm being regarded as supreme, with the correlative obligation on national authorities to disapply conflicting national law, even if the norm does not fulfil the conditions for direct effect *stricto sensu*.

Fourthly, in normative terms, the primacy model places supremacy in the driving seat, with direct effect being relevant only in relation to substitution effects, while the trigger model places direct effect in the driving seat, with supremacy being the remedial manifestation of using directly effective EU rights in national courts. This is a real difference. It can nonetheless be overstated. The more cases are characterized as being about substitution effects, the more the primacy model demands direct effect *stricto sensu* as a trigger for supremacy. The more the trigger model broadens direct effect by embracing not only subjective rights produced by clear, precise, unconditional EU law, but also 'any situation in which Community norms produce independent effects within the national legal systems',[10] the less stringent does the trigger become, and the greater the prominence accorded to supremacy.

(c) AMBIT

While the conceptual basis for the supremacy of EU law was set out in *Costa*, the ambit of the principle became clearer in later decisions.

(i) *Supremacy Principle Applicable against all National Law*

In the following case, the Court ruled that the legal status of a conflicting national measure was not relevant to the question whether EU law should take precedence.[11] Not even a fundamental rule of national constitutional law could be invoked to challenge the supremacy of a directly applicable EU law. This ruling gave rise for some time to a potentially serious conflict in the relationship between the German Constitutional Court and the ECJ. While the ECJ has sought to avoid a direct constitutional conflict with a national court,[12] it has never retreated from its claims.

[12] See, eg, Case C–446/98 *Fazenda Pública v Câmara* [2000] ECR I–11435, [36]–[38].

Case 11/70 **Internationale Handelsgesellschaft mbH v Einfuhr- und Vorratsstelle für Getreide und Futtermittel**
[1970] ECR 1125

The applicant argued that a Community regulation under which a deposit would be forfeited if the goods were not exported within the period of time set was contrary to principles of national constitutional law, including freedom of action and of disposition, economic liberty, and proportionality.

THE ECJ

3. Recourse to the legal rules or concepts of national law in order to judge the validity of measures adopted by the institutions of the Community would have an adverse effect on the uniformity and efficacy of Community law. The validity of such measures can only be judged in the light of Community law. In fact, the law stemming from the Treaty, an independent source of law, cannot because of its very nature be overridden by rules of national law, however framed, without being deprived of its character as Community law and without the legal basis of the Community itself being called into question. Therefore the validity of a Community measure or its effect within a Member State cannot be affected by allegations that it runs counter to either fundamental rights as formulated by the constitution of that State or the principles of a national constitutional structure.

The ECJ faced the opposite kind of argument in *Ciola*, where the Austrian government argued that the principle of primacy should not automatically apply 'to specific individual administrative acts'.[13] The Court dismissed this argument, reaffirming that any provision of national law which conflicted with directly effective EU law should not be applied. Thus the principle of primacy is required by the ECJ whenever directly effective EU law is concerned, and regardless of whether fundamental national constitutional norms or minor administrative acts are at issue. More recently, the ECJ qualified its reasoning in *Ciola* by admitting that, under specific circumstances, supremacy needs to be accommodated with domestic limitations of the period of time during which certain administrative acts may be repealed or judicially contested.[14]

(ii) *Supremacy Principle Applicable to National Laws that Pre-date and Post-date EU Law*

The ECJ in *Simmenthal* developed further its supremacy doctrine by making clear that the supremacy of EU law applied irrespective of whether the national law pre-dated or post-dated the EU law. An EU measure rendered inapplicable any conflicting provision of national law and prevented the adoption of new national law that would conflict with Union law.

Case 106/77 **Amministrazione delle Finanze dello Stato v Simmenthal SpA**
[1978] ECR 629

The respondent company, which had imported beef from France into Italy, brought an action before the Pretore claiming repayment of the fees which had been charged to it for a veterinary inspection

[13] Case C–224/97 *Ciola v Land Vorarlberg* [1999] ECR I–2517, [24].
[14] Case C–453/00 *Kühne & Heitz* [2004] ECR I–837; Case C–2/06 *Willy Kempter AG* [2008] ECR I–411. See Ch 13 for discussion.

at the frontier, on the basis that the charge was incompatible with EC law. The ECJ, on a preliminary reference, ruled that such charges were indeed contrary to the Treaty. When the Pretore therefore ordered repayment of the amounts with interest, the Italian fiscal authorities objected that the national court could not simply refuse to apply a national law which conflicted with Community law, but must first bring the matter before the Italian Constitutional Court to have the Italian law declared unconstitutional. The Pretore therefore referred the case again to the ECJ, asking whether in these circumstances the national law must be disregarded forthwith without waiting until it was set aside by the appropriate constitutional authority.

THE ECJ

17. Furthermore, in accordance with the principle of the precedence of Community law, the relationship between provisions of the Treaty and directly applicable measures of the institutions on the one hand and the national law of the Member States on the other is such that those provisions and measures not only by their entry into force render automatically inapplicable any conflicting provision of current national law but—in so far as they are an integral part of, and take precedence in, the legal order applicable in the territory of each of the Member States—also preclude the valid adoption of new national legislative measures to the extent to which they would be incompatible with Community provisions.

18. Indeed any recognition that national legislative measures which encroach upon the field within which the Community exercises its legislative power or which are otherwise incompatible with the provisions of Community law had any legal effect would amount to a corresponding denial of the effectiveness of obligations undertaken unconditionally and irrevocably by Member States pursuant to the Treaty and would thus imperil the very foundations of the Community.

...

21. It follows from the foregoing that every national court must, in a case within its jurisdiction, apply Community law in its entirety and protect rights which the latter confers on individuals and must accordingly set aside any provision of national law which may conflict with it, whether prior or subsequent to the Community rule.

The reasoning in *Simmenthal* was forcefully reaffirmed in the *Winner Wetten* case.[15] The ECJ also considered whether provisions of national law held incompatible with EU law could be maintained provisionally in force during the period necessary for the domestic authorities to redress the violation, by analogy with Article 264 TFEU which allows the ECJ to suspend the annulment of an EU measure pending the adoption of a new measure. The ECJ neither confirmed nor excluded that possibility,[16] but made it clear that if it were to be recognized, a national court could make use of it only 'where overriding considerations of legal certainty involving all the interests [at stake], public as well as private', justified it, and only during the period of time 'necessary in order to allow such illegality to be remedied'.[17] The ECJ found that these criteria were not met in the case.

(D) THE NATIONAL BODIES THAT MUST APPLY THE SUPREMACY DOCTRINE

The cases considered thus far laid the foundations for the supremacy doctrine and determined its ambit. They did not however address a separate issue, this being which national courts could apply the

[15] Case C–409/06 *Winner Wetten v Bürgermeisterin der Stadt Bergheim*, 8 Sept 2010.
[16] Ibid [67].
[17] Ibid [66].

supremacy doctrine. This was of special concern in many civil law countries, where it was often only the Constitutional Court which could, according to national law, declare a national law to be unconstitutional. This issue arose in *Simmenthal*, where the Italian tax authorities questioned the Pretore's order awarding the repayment of fees which had been charged under an existing national law before it had been adjudicated upon by the Constitutional Court.

Case 106/77 **Amministrazione delle Finanze dello Stato v Simmenthal SpA** [1978] ECR 629

THE ECJ

21. It follows from the foregoing that every national court must, in a case within its jurisdiction, apply Community law in its entirety and protect rights which the latter confers on individuals and must accordingly set aside any provision of national law which may conflict with it, whether prior or subsequent to the Community rule.

22. Accordingly any provision of a national legal system and any legislative, administrative or judicial practice which might impair the effectiveness of Community law by withholding from the national court having jurisdiction to apply such law the power to do everything necessary at the moment of its application to set aside national legislative provisions which might prevent Community rules from having full force and effect are incompatible with those requirements which are the very essence of Community law.

23. This would be the case in the event of a conflict between a provision of Community law and a subsequent national law if the solution of the conflict were to be reserved for an authority with a discretion of its own, other than the court called upon to apply Community law, even if such an impediment to the full effectiveness of Community law were only temporary.

24. The first question should therefore be answered to the effect that a national court which is called upon, within the limits of its jurisdiction, to apply provisions of Community law is under a duty to give full effect to those provisions, if necessary refusing of its own motion to apply any conflicting provision of national legislation, even if adopted subsequently, and it is not necessary for the court to request or await the prior setting aside of such provision by legislative or other constitutional means.

The clear message from the ECJ was that, even if the Constitutional Court was the only national court empowered to pronounce on the constitutionality of a national law, where a conflict between national law and EU law arose before another national court, that court must give immediate effect to Union law without awaiting the prior ruling of the Constitutional Court.

The *Simmenthal* principle has been affirmed many times,[18] and was extended in *Factortame*.[19] UK law did not at that time allow interim relief to be claimed against the Crown. The ECJ reiterated the *Simmenthal* ruling on the need for effectiveness and the automatic precedence of directly effective EU law over national law, and then stated[20] that 'the full effectiveness of Community law would be just as much impaired if a rule of national law could prevent a court seized of a dispute governed by Community law from granting interim relief in order to ensure the full effectiveness of the judgment to be given on the existence of the rights claimed under Community law'. It followed that a court

[18] See, eg, Case C–409/06 *Winner Wetten* (n 15); Case C–314/08 *Krzysztof Filipiak v Dyrektor Izby Skarbowej w Poznaniu* [2009] ECR I–11049; Cases C–188–189/10 *Melki and Abdeli*, 22 June 2010.

[19] Case C–213/89 *R v Secretary of State for Transport, ex p Factortame Ltd and Others* [1990] ECR I–2433.

[20] Ibid [21].

which in those circumstances would grant interim relief if it were not for a rule of national law was obliged to set aside that rule.

The *Simmenthal* principle was further extended in *Larsy*, where the ECJ ruled that not only national courts but also the relevant administrative agencies, in this case a national social insurance institution, should disapply conflicting national laws in order to give effect to the primacy of EU law.[21]

The *Simmenthal* principle was of great significance both practically and conceptually. The supremacy of EU law penetrated throughout the national legal system and was to be applied by all national courts in cases that fell within their jurisdiction. It was not necessary for an individual to fight her way to the national Constitutional Court. The national court seised of the dispute could itself refuse to apply provisions of national law that conflicted with EU law. The application of this principle was forcefully exemplified in *Filipiak*.[22] The ECJ ruled that national courts could not be prevented from respecting the principle of the primacy of Union law and from setting aside provisions of national law which conflicted with Union law because of the judgment of the national Constitutional Court, which had deferred the date on which those provisions, held to be unconstitutional, were to lose their binding force. Similarly in *Melki*[23] the ECJ ruled that EU law precluded Member State legislation which established an interlocutory procedure for the review of the constitutionality of national laws, insofar as the priority nature of that procedure prevented, both before submission of a question on constitutionality to the national Constitutional Court and after its decision, all other national courts from referring to the ECJ under Article 267 TFEU. The ECJ did however set out certain conditions on which such a procedure could be compatible with EU law.

(E) IMPACT ON NATIONAL LAW

We have seen that according to the ECJ an EU measure renders inapplicable any conflicting provision of national law and prevents the adoption of new national law that would conflict with EU law. Two points should be made by way of further clarification.

First, the *Simmenthal* principle does not require the national court to invalidate or annul the provision of national law that conflicts with EU law, but rather to refuse to apply it, and considerations of legal certainty may mean that the inapplicability of the national law will not expose those who relied on it to penalties.[24] This distinction between disapplying and nullifying national law was emphasized in the *IN.CO.GE '90* case. The ECJ rejected the Commission's argument that the incompatibility of EU law with a subsequently adopted rule of national law must render the national rule non-existent.[25]

> It cannot therefore, contrary to the Commission's contention, be inferred from the judgment in *Simmenthal* that the incompatibility with Community law of a subsequently adopted rule of national law has the effect of rendering that rule of national law non-existent. Faced with such a situation, the national court is, however, obliged to disapply that rule, provided always that this obligation does not restrict the power of the competent national courts to apply, from among the various procedures available under national law, those which are appropriate for protecting the individual rights conferred by Community law.

Secondly, it is clear from *Kapferer*[26] that a national court is not always obliged to review and set aside a final judicial decision which infringes EU law. The ECJ recognized the importance of the principle of *res judicata*, whereby judicial decisions that have become definitive can no longer be called into question. EU law did not therefore require a national court to disapply domestic rules of procedure conferring finality on a decision, even if to do so would enable it to remedy an infringement of EU law by the decision at issue. The relevant national procedural rules must however comply with the principles of equivalence and effectiveness.[27]

The ECJ has more recently limited the possibility of circumventing supremacy through reliance on the principle of *res judicata*. In *Lucchini*,[28] the Court held that EU law precluded the application of a provision of national law laying down the principle of *res judicata* where this would prevent the recovery of state aid granted in breach of EU law. Following this case, it was uncertain whether *Kapferer* was still good law.

In *Fallimento Olimpiclub Srl*, however, the Court distinguished both cases.[29] Recalling the principle in *Kapferer*, the ECJ held that EU law did not require a national court to disapply domestic rules of procedure conferring finality on a decision, even if to do so would make it possible to remedy an infringement of Union law in the contested decision.[30] The Court distinguished *Lucchini*, interpreting it as a 'highly specific' case where the Commission had exclusive competence to assess the compatibility of state aid with the common market.[31] The ECJ nonetheless held that the effectiveness of EU law would be impaired if the principle of *res judicata* deprived national courts not only of the possibility of reopening a final judicial decision made in breach of EU law, but also of rectifying that infringement in subsequent cases presenting the same fundamental issue.[32]

(F) DECLARATION 17 ON PRIMACY

The primacy of EU law over national law has been developed by the EU Courts and has not hitherto been enshrined in the Treaties. The Constitutional Treaty did bite this particular constitutional bullet. Article I–6 CT provided that:

> The Constitution and law adopted by the institutions of the Union in exercising competences conferred on it shall have primacy over the law of the Member States.

This provision was dropped from the Lisbon Treaty at the behest of the European Council in 2007, the rationale being that this would, with other changes, thereby diminish its 'constitutional character'.[33] It was replaced in the Lisbon Treaty by a Declaration concerning primacy.[34]

> The Conference recalls that, in accordance with well settled case law of the Court of Justice of the European Union, the Treaties and the law adopted by the Union on the basis of the Treaties have primacy over the law of Member States, under the conditions laid down by the said case law.

[34] Declaration 17 Concerning Primacy.

> The Conference has also decided to attach as an Annex to this Final Act the Opinion of the Council Legal Service on the primacy of EC law as set out in 11197/07 (JUR 260).

The opinion of the Council Legal Service appended to the Declaration was brief, reiterating the basic *communautaire* view on the topic.

> It results from the case-law of the Court of Justice that primacy of EC law is a cornerstone principle of Community law. According to the Court, this principle is inherent to the specific nature of the European Community. At the time of the first judgment of this established case law (Costa/ENEL,15 July 1964, Case 6/641 (1) there was no mention of primacy in the treaty. It is still the case today. The fact that the principle of primacy will not be included in the future treaty shall not in any way change the existence of the principle and the existing case-law of the Court of Justice.

It might be argued that dropping the primacy clause from the Lisbon Treaty was unwise, because its removal might cause some national courts to doubt the continuing validity of the supremacy principle. This is unlikely, and any such danger is outweighed by the problems with Article I–6 CT.[35] The most significant, but by no means the only, problem was that the wording of Article I–6 CT was crucially ambiguous. The phrase 'shall have primacy over the law of the Member States' could have been interpreted to mean, following the ECJ's jurisprudence, that supremacy operated over all national law, including provisions in a national constitution. It could alternatively have been read so as to accord primacy to EU law over national law, but not the national constitution itself. It would have been perfectly possible to have drafted Article I–6 'symmetrically' so as to read that 'the Constitution and law adopted by the institutions of the Union in exercising competences conferred on it shall have primacy over the *constitution* and law of the Member States', thereby removing the ambiguity.

The fact that such a formulation was not chosen by the Convention on the Future of Europe was almost certainly because it would have been very controversial. It would have been more difficult to secure agreement on the Constitutional Treaty in the Convention and the subsequent IGC. It would in addition have created serious problems in some national Constitutional Courts, which might either have decided that according primacy to EU law over the national constitution was simply not constitutionally possible, or that it would require a constitutional amendment.

It might be argued that primacy of EU law over all national law has been the 'law' as far as the ECJ is concerned ever since the early 1970s. This may well be true, but the legal reality is that it has not, as will be seen below, been generally accepted by national courts. This 'disjunction' was almost certainly acknowledged by Union and national courts. Neither side was however spoiling for the ultimate fight on the issue, which is why 'constitutional tolerance' prevented constitutional crisis. This was possible in part precisely because there was no hard-edged Treaty provision embodying the ECJ's view. If Article I–6 CT had been brought into the picture this would have changed.

This still leaves open the status of the supremacy principle under the Lisbon Treaty. This will very likely continue much as it had under the EC Treaty. The ECJ will continue to espouse its version of primacy, using the Declaration appended to the Lisbon Treaty to reinforce this. It should however be noted that the Declaration suffers from the very same infirmity that pervaded Article I–6 CT. It too is framed in terms of EU law having 'primacy over the law of the Member States', which once again is ambiguous as to whether it covers all national law, including the constitution, or whether the latter is excluded. It could be argued that the broader construction should be given, because the

[35] P Craig, 'The Constitutional Treaty and Sovereignty' in C Kaddous and A Auer (eds), *Les Principes Fondamentaux de la Constitution Européene/The Fundamental Principles of the European Constitution* (Dossier de Droit Européen No 15, Helbing & Lictenhahn/Bruylant/LGDJ, 2006) 117–134.

Declaration states that such primacy is to operate 'under the conditions laid down by the said case law'. This refers to the ECJ's jurisprudence, under which all EU law has primacy over all national law, including national constitutions.

It is nonetheless very unlikely that national Constitutional Courts will be persuaded to forget their previous concerns, and accept that EU law prevails over national constitutions, based on a Declaration appended to the Treaties. The 'disjunction' of view between EU and national judiciaries noted above will therefore likely continue under the new legal order. It is unlikely that either side will be eager to pick a fight on this issue, although changes of judicial personnel can lead to altered perspectives in this respect.

There is moreover nothing to suggest that the Lisbon Treaty has 'resolved' the *Kompetenz-Kompetenz* issue, as to who is to decide on the ultimate boundary of Union competences.[36] Nor is there anything in the Lisbon Treaty that strengthens the ECJ's claim to be the ultimate decider in such instances. There is no doubt that the ECJ would have the authority to pronounce on a disputed issue as to whether the EU has competence to act or not, pursuant to its general jurisdiction to interpret EU law in Article 19 TEU. This does not however mean that its judgment would be conclusive in this respect. Moreover the wording of Article 5(2) TEU, which is framed in terms of the Union acting within the limits of the competences conferred on it by the Member States and competences not conferred on the EU remaining with the Member States, does nothing to bolster the claims of the EU to decide on the ultimate boundaries of competence.

(G) CONCLUSION

The supremacy of EU law and the requirement that national courts must ensure its practical effectiveness are, as far as the ECJ is concerned, established beyond question in a consistent line of case law. There are certain Treaty provisions which some may view as a partial dilution of the supremacy principle, such as Article 351 TFEU, which relieves Member States of the obligation to ensure the primacy of EU law in certain circumstances,[37] or Article 347 TFEU, which appears to carve out an area within which the Member States retain a degree of sovereignty.[38] Nonetheless, these provisions are of limited scope, and the basic principle of supremacy articulated by the ECJ is a broad and general one. Nevertheless, this constitutes only one part of the supremacy story. Ultimately, the acceptance and application of the primacy of EU law are dependent on the Member States.

J Weiler, The Community System: the Dual Character of Supranationalism[39]

As in the case of 'direct effect' the derivation of supremacy from the Treaty depended on a 'constitutional' rather than international law interpretation. The Court's reasoning that supremacy was enshrined in the Treaty was contested by the governments of Member States in this case and others. Acceptance of this view amounts in effect to a quiet revolution in the legal orders of the Member States. . . .

It follows that the evolutionary nature of the doctrine of supremacy is necessarily bidimensional. One dimension is the elaboration of the parameters of the doctrine by the European Court. But its full reception, the second dimension, depends on its incorporation into the constitutional orders of the Member States and its affirmation by their supreme courts. It is relatively easy to trace the evolution of the Community dimension of the doctrine. . . .

As regards the second dimension, the evolutionary character of the process is more complicated. It should be remembered that in respect of the original Member States there was no specific constitutional preparation for this European Court-inspired development.

3 SECOND DIMENSION: SUPREMACY FROM THE PERSPECTIVE OF THE MEMBER STATES

The evolutionary nature of acceptance of supremacy noted by Weiler is still evident today. There is a continuing tension between national accounts of EU law and the ECJ's account. Constitutional conflicts continue to arise in specific cases, and it remains for national courts to resolve cases arising before them involving a conflict between EU and national law.[40]

We will now examine the accommodation reached by the courts of various Member States on the issue of the primacy of EU law. For reasons of space, only a small number of Member States are selected for discussion.[41] It may be helpful to frame the subsequent discussion by distinguishing four particular issues that can arise in any Member State concerning supremacy.

i. The first is whether the Member State accepts the supremacy of EU law, assuming that the EU acts within its proper sphere of competence. The general answer to this question is affirmative, subject to the qualifications flowing from the other three issues.

ii. Assuming an affirmative answer to the first question, the second issue is the conceptual basis on which the Member State accords supremacy to EU law. It may choose to do so because it accepts the ECJ's *communautaire* reasoning in *Costa*, or because of a provision within its own national legal order. For most Member States it is the latter rather than the former that provides the conceptual foundation for acceptance of supremacy.

iii. The third important issue is whether the national legal order places limits on its acceptance of EU law supremacy derived from its own national constitution and/or national fundamental rights. The ECJ regards the supremacy of EU law as operating against all species of national law, including the national constitution. On this view any norm of EU law trumps any norm of national law. This proposition is not generally accepted by Member States.

iv. The final issue is known as *Kompetenz-Kompetenz*. It addresses the issue of who has ultimate authority to define the allocation of competence as between the EU and the Member States. The ECJ under Article 19 TEU regards this as its task, whereas virtually all national constitutional or supreme courts determine such questions ultimately by reference to their own national constitutional provisions, although they will treat with respect the ECJ's own view on the matter.

(A) FRANCE

(i) *Acceptance of Supremacy*

We can begin by addressing the first of the issues set out above: whether the national legal system accepts the supremacy of EU law. The French courts do now accept the supremacy of EU law, but it took some time before all French courts did so.

The French judicial system is divided between the administrative courts and the ordinary courts. In 1970 the supreme administrative court, the Conseil d'Etat, rejected in practice the supremacy of EU law over national law.[42] In *Semoules*,[43] it ruled that since it had no jurisdiction to review the validity of French legislation, it could not find such legislation to be incompatible with EU law, and it could not accord priority to the latter. This was so notwithstanding the fact that the French Constitution provided for the primacy of certain international treaties over domestic law, since the Conseil d'Etat held that decisions on the constitutionality of legislation were for the Conseil Constitutionnel, the Constitutional Council, to make before the legislation was promulgated.

A doctrinal 'split' occurred when the supremacy of EU law over French law was accepted in 1975 in *Café Jacques Vabres* by the Cour de Cassation,[44] the highest of the ordinary judicial courts, in a case concerning a conflict between Article 90 EC and a later provision of the French Customs Code. Following the suggestion of the Procureur Général, the Cour held that the question was not whether it could review the constitutionality of a French law. Instead, when a conflict existed between an 'internal law' and a properly ratified 'international act' which had thus entered the internal legal order, the Constitution itself accorded priority to the latter. Respect for the principle of the primacy of international treaties should not be left to the Conseil Constitutionnel to secure, since it was the duty of the ordinary courts before which such problems actually arose to do justice in the case.

It was not until 1989 that the Conseil d'Etat finally abandoned its so-called 'splendid isolation' and decided, in its capacity as an electoral court, to adopt the same position as the Conseil Constitutionnel and the Cour de Cassation.[45]

Raoul Georges Nicolo
[1990] 1 CMLR 173

The applicants were French citizens who brought an action for the annulment of the European Parliament elections in France in 1989, on the ground that the right to vote and to stand had been given to French

[44] Dec of 24 May 1975 in *Administration des Douanes v Société 'Cafés Jacques Vabre' et SARL Weigel et Cie* [1975] 2 CMLR 336.

[45] Dec of 20 Oct 1989 in *Nicolo*. It has been suggested that earlier decisions of the Conseil Constitutionnel, which indicated that it was for the other French courts to ensure that international treaties were applied, acted as a spur to the Conseil d'Etat to reverse its original position: P Oliver, 'The French Constitution and the Treaty of Maastricht' (1994) 43 ICLQ 1, 10.

citizens in the non-European overseas departments and territories of France. It was argued that the French statutory rule under challenge—Act 77–729—was contrary to the EEC Treaty.

COMMISSAIRE FRYDMAN[46]

However, the whole difficulty is then to decide whether, in conformity with your settled case law, you should dismiss this second argument by relying on the 1977 Act alone, without even having to verify whether it is compatible with the Treaty of Rome, or whether you should break fresh ground today by deciding that the Act is applicable only because it is compatible precisely with the Treaty.

In this connection we know that you held, in the famous divisional decision of 1 March 1968, *Syndicat Général des Fabricants de Semoules de France* that an administrative court cannot accord treaties precedence over subsequent legislation which conflicts with them and that this case law applies to Community rules just as much as to ordinary international conventions. . . .

The theoretical foundation of these decisions, which clearly does not take the form of an objection to the principle of the superiority of treaties over statutes, which is expressly stated by Article 55, should rather be sought in your wish to uphold the principle that it is not for the administrative courts to review the validity of legislation. . . .

On the other hand I believe it is possible to take the view that . . . Article 55 of itself necessarily enables the courts, by implication, to review the compatibility of statutes with treaties. Indeed, we must attribute to the authors of the Constitution an intention to provide for actual implementation of the supremacy of treaties which they embodied in that provision. . . .

On this basis, therefore, I propose that you should agree to give treaties precedence over later statutes.

. . . I am aware that the Court of Justice of the European Communities—which, as we know, gives the Community law absolute supremacy over the rules of national law, even if they are constitutional—has not hesitated for its part to affirm the obligation to refuse to apply in any situation laws which are contrary to Community measures.

I do not think you can follow the European Court in this judge-made law which, in truth, seems to me at least open to objection. Were you to do so, you would tie yourself to a supranational way of thinking which is quite difficult to justify, to which the Treaty of Rome does not subscribe expressly and which would quite certainly render the Treaty unconstitutional, however it may be regarded in the political context. . . .

I therefore suggest that you should base your decision on Article 55 of the Constitution and extend its ambit to all international agreements.

The Conseil d'Etat, although it did not expressly adopt the Commissaire's view, appeared to accept the premise underlying that view. It ruled that the French statutory rules were not invalid on the ground that they were 'not incompatible with the clear stipulations of the abovementioned Article 227(1) of the Treaty of Rome'.[47] By 1989 both the Cour de Cassation and the Conseil d'Etat were therefore willing in principle to accord primacy to EU law over national law.

The Conseil d'Etat has, since *Nicolo*, recognized the primacy of both EU regulations and directives.[48] Its jurisprudence concerning directives was nonetheless complex. This stemmed from its 1978 ruling in *Cohn-Bendit* that directives could not be used to challenge an individual

[46] [1990] 1 CMLR 173, 177, 178.

[47] Pollard (n 42) 271, 273–274.

[48] *Boisdet* [1991] 1 CMLR 3, on a reg which was adopted after the French law, and *Rothmans and Philip Morris* and *Arizona Tobacco and Philip Morris* [1993] 1 CMLR 253 on a dir adopted before the French law; H Cohen, Note (1991) 16 ELRev 144; P Roseren, 'The Application of Community Law by French Courts From 1982 to 1993' (1994) 31 CMLRev 315, 342.

administrative act.[49] The Conseil d'Etat developed an increasing number of qualifications to this basic proposition, which allowed directives to be relied on in a number of situations.[50] It then ruled in 2009 in *Mme Perreux* that a directive can indeed be relied on to challenge an individual administrative act, provided that the time for implementation of the directive had passed and provided also that the provisions of the directive were sufficiently certain and precise.[51] The Conseil d'Etat's willingness to engage in dialogue with the ECJ is moreover exemplified by its 2007 *Arcelor* ruling.[52] The case concerned a directive establishing an emission trading scheme under the Kyoto Protocol. The claimants alleged that the rights to property and to trade freely, and the principle of equality, as guaranteed by the French Constitution, were infringed by the decree implementing the Directive into French law. The Conseil d'Etat, instead of ruling on the legality of the decree under French constitutional law, referred the case to the ECJ, after observing that the fundamental rights in question were afforded similar protection under EU law.

(ii) *Conceptual Basis for Acceptance of Supremacy*

In the case of France, the initial conceptual basis for acceptance of supremacy of EU law was Article 55 of the French Constitution and not the ECJ's *communautaire* reasoning in *Costa*. In *Café Jacques Vabres* the Procureur Général tried to persuade the Cour de Cassation to adopt the ECJ's reasoning, and to base the supremacy of Union law on the very nature of the EU legal order. The Cour de Cassation however grounded its decision on Article 55 of the French Constitution. The Conseil d'Etat's ruling in *Nicolo* also rested on Article 55 of the French Constitution, which provided for the superiority of international treaties over national law, and in this case Commissaire Frydman discouraged the Conseil d'Etat from subscribing to the ECJ's 'supranational way of thinking'. The Conseil d'Etat and the Conseil Constitutionnel have also based the duty to implement EU law, and the supremacy of EU law over national law, on Article 88–1 of the French Constitution.[53]

(iii) *Limits to Acceptance of Supremacy*

We have seen that from the ECJ's perspective all EU law is supreme over all national law. This has not been accepted by the French courts. The Conseil d'Etat has not recognized the primacy of EU law over the Constitution itself.[54] EU law ranks above statute, but below the Constitution. This coheres with the views of the Conseil Constitutionnel[55] and the Cour de Cassation.[56] This nonetheless leaves the national courts with considerable interpretive discretion in deciding whether there is indeed a clash between EU law and a provision of the French Constitution.

[56] *Mlle Fraisse*, 2 July 2000.

C Charpy, The Status of (Secondary) Community Law in the French Internal Order[57]

Unquestionably, the reasoning of the *Conseil constitutionnel* and that of the *Conseil d'Etat* emphasizes the principle of the supremacy of the Constitution *vis-à-vis* Community law. They consider that the constituent power has incorporated in Article 88–1 of the Constitution the duty to implement directives and, more generally, the existence of the Community legal order integrated into the internal legal order. Thus, it is the Community legal order which is integrated into the national order, and not the other way around. Community law only can be effective in France by virtue of the constituent power's will. The Constitution remains the norm determining the relationship between the legal systems involved and thus has precedence over all other norms. In other words, because they are inscribed in the Constitution, the duty to implement Community law and the principle of its primacy do not alter the place of the Constitution at the top of the hierarchy of norms.

(iv) *Summary*

i. The French courts now generally accept, subject to what is said below, the supremacy of EU law over national law.

ii. The supremacy accorded to EU law is however not by virtue of the inherent nature of EU law as the Court of Justice would have it, 'but under the authority of their own national legal order'.[58] Articles 55 and 88–1 of the French Constitution have provided the conceptual foundation for the acceptance of supremacy in France.

iii. The French courts do not accept that EU law takes precedence over the Constitution.

iv. There has not been a clear case in the French courts raising the issue of *Kompetenz-Kompetenz*, but the predominant academic view is that this would be regard as residing in the French courts.

(B) GERMANY

(i) *Acceptance of Supremacy*

There is, as will be seen below, a rich jurisprudence concerning the relationship between EU law and German law, in which the German courts have articulated different limits to the supremacy of EU law. It is therefore all the more important to be clear that, subject to such limits, the German courts accept the supremacy of EU law. This is evident from the following extract, a decision of the Federal Constitutional Court in the *Honeywell* ruling 2010.[59]

53 The law of the European Union can only develop effectively if it supplants contrary Member State law. The primacy of application of Union law does not lead to a situation in which contrary national law is null and void. Member States' law can, rather, continue to apply if and to the degree that it retains an objective area of provision beyond the field of application of pertinent Union law. By contrast, contrary Member States' law is in principle inapplicable in the field of application of Union law. The primacy

[57] (2007) 3 EuConst 436, 459.
[58] B de Witte, 'Community Law and National Constitutional Values' (1991) 2 LIEI 1, 4.
[59] BVerfG, 2 BvR 2661/06, 6 July 2010.

of application follows from Union law because the Union could not exist as a legal community if the uniform effectiveness of Union law were not safeguarded in the Member States (see fundamentally ECJ Case 6/64 *Costa/ENEL* <judgment of 15 July 1964> [1964] ECR 1251 para. 12). The primacy of application also corresponds to the constitutional empowerment of Article 23.1 of the Basic Law, in accordance with which sovereign powers can be transferred to the European Union (see BVerfGE 31, 145 <174>; 123, 267 <402>). Article 23.1 of the Basic Law permits with the transfer of sovereign powers – if provided for and demanded by treaty – at the same time their direct exercise within the Member States' legal systems. It hence contains a promise of effectiveness and implementation corresponding to the primacy of application of Union law.

54 ...Unlike the primacy of application of federal law, as provided for by Article 31 of the Basic Law for the German legal system, the primacy of application of Union law cannot be comprehensive.

(ii) *Conceptual Basis for Acceptance of Supremacy*

The preceding extract provides guidance on the conceptual basis on which the German courts accept the supremacy of EU law over national law. It is evident from the *Honeywell* extract that supremacy is based primarily on what is now Article 23.1 of the German Constitution, which is specifically concerned with the EU and allows for transfer of sovereign powers. Reliance on provisions of the German Constitution has indeed been the dominant rationale for the acceptance of EU supremacy within Germany.[60] The Federal Constitutional Court nonetheless also expressly adverts to the ECJ's functional argument in *Costa*: primacy of application of EU law is demanded because 'the Union could not exist as a legal community if the uniform effectiveness of Union law were not safeguarded in the Member States'.

(iii) *Limits to Acceptance of Supremacy: Fundamental Rights*

The German courts have however laid down limits to the acceptance of EU supremacy. The Federal Constitutional Court noted in paragraph 54 of the *Honeywell* ruling that the primacy of application of EU law could not be comprehensive. It is the nature of those limits that has been subject to most debate, judicial and extra-judicial. Three types of limit are evident in the German courts' case law. They relate to fundamental rights, competence, and constitutional identity.

The German courts initially focused on fundamental rights as a limit to acceptance of the supremacy of EU law.

Internationale Handelsgesellschaft mbH v Einfuhr- und Vorratstelle für Getreide und Futtermittel
[1974] 2 CMLR 540

The facts are those set out in Case 11/70 before the ECJ.[61] On receiving the ECJ's ruling, the German Administrative Court[62] decided that since Article 24 could not be equated with an amendment of the German Constitution the Federal legislature could not, when ratifying the EEC Treaty, disclaim the

[61] See below 365.

[62] [1972] CMLR 177, 184.

observance of elementary basic rights in the Constitution. It also expressed concern that if Community law were given precedence over divergent constitutional provisions, national constitutional law would be eliminated as the highest national check on European legislation that did not have equivalent legal safeguards. Consequently the Administrative Court ruled, in the face of the ECJ's conflicting judgment, that the Community's deposit system breached basic principles of German constitutional law, and it requested a ruling from the Federal Constitutional Court, the Bundesverfassungsgericht (BVerfG). This judgment, known as the '*Solange I*' decision (so long as), was given by the BVerfG in 1974.

THE BUNDESVERFASSUNGSGERICHT (BVERFG)[63]

Article 24 of the Constitution deals with the transfer of sovereign rights to inter-state institutions. This . . . does not open the way to amending the basic structure of the Constitution, which forms the basis of its identity, without a formal amendment to the Constitution, that is, it does not open any such way through the legislation of the inter-state institution. Certainly, the competent Community organs can make law which the competent German constitutional organs could not make under the law of the Constitution and which is none the less valid and is to be applied directly in the Federal Republic of Germany. But Article 24 of the Constitution limits this possibility in that it nullifies any amendment of the Treaty which would destroy the identity of the valid constitutional structure of the Federal Republic of Germany by encroaching on the structures which go to make it up. . . .

The part of the Constitution dealing with fundamental rights is an inalienable essential feature of the valid Constitution of the Federal Republic of Germany and one which forms part of the constitutional structure of the Constitution. Article 24 of the Constitution does not without reservation allow it to be subjected to qualifications. In this, the present state of integration of the Community is of crucial importance. The Community still lacks a democratically legitimated Parliament directly elected by general suffrage which possesses legislative powers and to which the Community organs empowered to legislate are fully responsible on a political level. It still lacks in particular a codified catalogue of fundamental rights, the substance of which is reliably and unambiguously fixed for the future in the same way as the substance of the Constitution. . . .

Provisionally, therefore, in the hypothetical case of a conflict between Community law and . . . the guarantees of fundamental rights in the Constitution . . . the guarantee of fundamental rights in the Constitution prevails as long as the competent organs of the Community have not removed the conflict of norms in accordance with the Treaty mechanism.

The highest German court therefore refused to recognize the unconditional supremacy of EU law because of the possible impact of Union law on basic rights enshrined in the German Constitution. It ruled that what was Article 24 of the Constitution could not cover a transfer of power to amend an 'inalienable essential feature' of the German constitutional structure, such as its protection for fundamental rights. The BVerfG would not abandon its jurisdiction to decide which legislative transfers would alter an unalterable feature of the Constitution, and the protection of fundamental rights in the German Constitution would prevail over EU law in the event of conflict.

In 1986, however, in a case in which an EC import licensing system was challenged despite an ECJ ruling on its validity,[64] the BVerfG delivered its so-called *Solange II* judgment, which qualified the 1974 *Solange I* judgment to a considerable extent. Solange means 'so long as' and it refers to the statement of the BVerfG that so long as the EU had not removed the possible 'conflict of norms' between EU law and national constitutional rights, the German court would ensure that those rights took precedence.

[63] [1974] 2 CMLR 540, 549–550.
[64] Case 345/82 *Wünsche Handelsgesellschaft v Germany* [1984] ECR 1995.

Re Wünsche Handelsgesellschaft
[1987] 3 CMLR 225

Having considered various changes in Community law since the 1974 decision, including the ECJ's development of protection for fundamental rights, the adoption of various declarations on rights and democracy by the Community institutions,[65] and the fact that all EC Member States had acceded to the European Convention on Human Rights, the BVerfG in *Solange II* ruled as follows.[66]

THE BUNDESVERFASSUNGSGERICHT (BVERFG)

In view of these developments, it must be held that, *so long as* the European Communities, and in particular the case law of the European Court, generally ensure an effective protection of fundamental rights as against the sovereign powers of the Communities which is to be regarded as substantially similar to the protection of fundamental rights required unconditionally by the Constitution, and in so far as they generally safeguard the essential content of fundamental rights, the Federal Constitutional Court will no longer exercise its jurisdiction to decide on the applicability of secondary Community legislation cited as the legal basis for any acts of German courts or authorities within the sovereign jurisdiction of the Federal Republic of Germany, and it will no longer review such legislation by the standard of the fundamental rights contained in the Constitution.

The *Solange II* decision rendered a clash between EU law and national law over fundamental rights less likely. It should nonetheless be recognized, as Frowein makes clear, that the court in *Solange II* did not surrender jurisdiction over fundamental rights, but only stated that it would not exercise that jurisdiction as long as the present conditions as to the protection of fundamental rights by the ECJ prevailed.[67] The Federal Constitutional Court preserved its final authority to intervene if real problems concerning the protection of fundamental rights in EU law arose. It is nonetheless clear that the German courts are reluctant to exercise the jurisdiction which they retain.

This is exemplified by the Federal Constitutional Court's ruling concerning a claim that certain Community regulations concerning bananas interfered with the right to pursue a trade and the right to property as protected by the German Constitution. The BverfG deemed the reference inadmissible.[68] The Constitutional Court stated that it had already declared itself satisfied, in its *Solange II* and *Maastricht* decisions, with the fact that human rights protection within the EU legal order was generally comparable to the level of human rights protection under the German Basic Law. Consequently, constitutional complaints attacking secondary EU law on the basis of German fundamental rights would be inadmissible *ab initio* if they did not argue that the general level of European human rights protection, including ECJ case law since *Solange II*, fell below the necessary level, as compared to German levels of protection.[69]

(iv) *Limits to Acceptance of Supremacy: Competence and the* Ultra Vires *Lock*

The BVerfG articulated a competence-based limit to its acceptance of EU supremacy in the so-called 'Maastricht judgment', when the constitutionality of the state's ratification of the Maastricht Treaty was challenged.

Brunner v The European Union Treaty
[1994] 1 CMLR 57

Germany had completed the legislative part of the TEU ratification process in 1992, amending its Constitution, but before the Federal President signed the formal instrument of ratification, constitutional complaints were made to the BVerfG. It decided that ratification was compatible with the Constitution, but it ruled not just on Germany's constitutional competence to ratify the TEU, but also on what the future position would be if the Community attempted to exercise powers which were not clearly provided for in the Treaties. The judgment provoked a great deal of comment.[70] Affirming the sovereignty of the German state, the Constitutional Court made clear that it would not relinquish its power to decide on the compatibility of Community law with the fundamentals of the German Constitution and would continue to exercise a power of review over the scope of Community competence.

THE BUNDESVERFASSUNGSGERICHT (BVERFG)

48. There is . . . a breach of Article 38 of the Constitution if an Act that opens up the German legal system to the direct validity and application of the law of the (supranational) European Communities does not establish with sufficient certainty the intended programme of integration. If it is not clear to what extent and degree the German legislature has assented to the transfer of the exercise of sovereign powers, then it will be possible for the European Community to claim functions and powers that were not specified. That would be equivalent to a general enablement and would therefore be a surrender of powers, something against which Article 38 of the Constitution provides protection.

. . .

55. The Federal Republic of Germany, therefore, even after the Union Treaty comes into force, will remain a member of a federation of States, the common authority of which is derived from the Member States and can only have binding effects within the German sovereign sphere by virtue of the German instruction that its law be applied. Germany is one of the 'Masters of the Treaties' which have established their adherence to the Union Treaty concluded 'for an unlimited period' with the intention of long-term membership, but could ultimately revoke that adherence by a contrary act. The validity and application of European law in Germany depends on the application-of-law instruction of the Accession Act. Germany thus preserves the quality of a sovereign state in its own right.

. . .

99. Inasmuch as the Treaties establishing the European Communities, on the one hand, confer sovereign rights applicable to limited factual circumstances and, on the other hand, provide for Treaty amendments . . . this distinction is also important for the future treatment of the individual powers.

[70] M Herdegen, 'Maastricht and the German Constitutional Court: Constitutional Restraints for an Ever Closer Union' (1994) 31 CMLRev 235; U Everling, 'The Maastricht Judgment of the German Federal Constitutional Court and its Significance for the Development of the European Union' (1994) 14 YBEL 1; M Zulegg, 'The European Constitution under Constitutional Constraints: The German Scenario' (1997) 22 ELRev 19; JHH Weiler, 'Does Europe Need a Constitution? Reflections on Demos, Telos and the German Maastricht Decision' (1995) 1 ELJ 219; N MacCormick, 'The Maastricht-Urteil: Sovereignty Now' (1995) 1 ELJ 259; J Kokott, 'German Constitutional Jurisprudence and European Integration' (1996) 2 EPL 237 and 413.

> Whereas a dynamic extension of the existing Treaties has so far been supported on the basis of an open-handed treatment of Article 235 of the EEC Treaty as a 'competence to round off the Treaty' as a whole, and on the basis of considerations relating to the 'implied powers' of the Communities, and of Treaty interpretation as allowing maximum exploitation of Community powers (*effet utile*), in future it will have to be noted as regards interpretation of enabling provisions by Community institutions and agencies that the Union Treaty as a matter of principle distinguishes between the exercise of a sovereign power conferred for limited purposes and the amending of the Treaty, so that its interpretation may not have effects that are equivalent to an extension of the Treaty. Such an interpretation of enabling rules would not produce any binding effects for Germany.

This was a long and powerful judgment which warned the EU institutions and the ECJ that Germany's acceptance of the supremacy of EU law was conditional. The BVerfG emphasized its intention to ensure that the EU did not stray beyond the powers expressly conferred upon it in the Treaties by the Member States. Thus, even if German courts have accepted that, within its proper sphere of application, Union law should be given precedence over national law, the BVerfG asserted its jurisdiction to review the actions of European 'institutions and agencies', which presumably included the ECJ, to ensure that they remained within the limits of their powers and did not transgress the basic constitutional rights of German inhabitants.

Some of the more contentious aspects of the judgment concerned the BVerfG's comments about the nature of national democracy, and about the need for national democratic legitimation to express the 'spiritual, social and political' homogeneity of a people.[71] However, other sections of the judgment appear more open to the possibility that the EU could develop the conditions of political openness and the 'free interaction of social forces, interests and ideas' necessary for full democratic legitimation,[72] so that, presumably, a wider range of powers and competences could be transferred by Germany to the EU without breaching the basic principle of democracy guaranteed by the Constitution.

Since the drama of the Maastricht decision there has been a more concrete challenge to the supremacy of EU law in a much-litigated dispute concerning the EU's banana import regime.[73] There are however signs that the threat of conflict between the ECJ and the German courts has subsided. The June 2000 decision of the Bundesverfassungsgericht,[74] which rejected as inadmissible the claim that EU legislation violated German fundamental rights, was hailed as evidence of a renewed cooperative relationship between the two courts.[75] Commentators, looking at the bananas decision and another decision of the BverfG, suggested that the BVerfG had erected such high hurdles that 'it has become very improbable that the Constitutional Court will exercise its reserve control',[76] or its 'subsidiary emergency jurisdiction'[77] over the compatibility of EU law with the German constitution.[78]

[78] For a more critical view see Schmid (n 68) 106.

These sentiments have been reinforced by the recent decision of the BVerfG in the *Honeywell* ruling, in which it set out the conditions on which it would refuse to accept EU law on the grounds that the EU had acted beyond its competence and hence *ultra vires*.[79]

2 BvR 2661/06, 6 July 2010

THE BUNDESVERFASSUNGSGERICHT (BVERFG)

54 Unlike the primacy of application of federal law, as provided for by Article 31 of the Basic Law for the German legal system, the primacy of application of Union law cannot be comprehensive (see BVerfGE 73, 339 <375>; 123, 267 <398>).

55 As autonomous law, Union law remains dependent on assignment and empowerment in a Treaty. For the expansion of their powers, the Union bodies remain dependent on amendments to the Treaties which are carried out by the Member States in the framework of the respective constitutional provisions which apply to them and for which they take responsibility … The applicable principle is that of conferral (Article 5.1 sentence 1 and Article 5.2 sentence 1 TEU). The Federal Constitutional Court is hence empowered and obliged to review acts on the part of the European bodies and institutions with regard to whether they take place on the basis of manifest transgressions of competence or on the basis of the exercise of competence in the area of constitutional identity which is not assignable (Article 79.3 in conjunction with Article 1 and Article 20 of the Basic Law) … and where appropriate to declare the inapplicability of acts for the German legal system which exceed competences.

56 The obligation incumbent on the Federal Constitutional Court to pursue substantiated complaints of an *ultra vires* act on the part of the European bodies and institutions is to be coordinated with the task which the Treaties confer on the Court of Justice, namely to interpret and apply the Treaties, and in doing so to safeguard the unity and coherence of Union law (see Article 19.1 (1) sentence 2 TEU and Article 267 TFEU).

57 If each Member State claimed to be able to decide through their own courts on the validity of legal acts of the Union, the primacy of application could be circumvented in practice, and the uniform application of Union law would be placed at risk. If, however, on the other hand the Member States were to completely forgo *ultra vires* review, disposal of the treaty basis would be transferred to the Union bodies alone, even if their understanding of the law led in the practical outcome to an amendment of a Treaty or to an expansion of competences. That in the borderline cases of possible transgression of competences on the part of the Union bodies—which are infrequent, as should be expected according to the institutional and procedural precautions of Union law—the constitutional and the Union law perspective do not completely harmonise, is due to the circumstance that the Member States of the European Union also remain the masters of the Treaties subsequent to the entry into force of the Treaty of Lisbon, and that the threshold to the federal state was not crossed (see BVerfGE 123, 267 <370–371>). The tensions, which are basically unavoidable according to this construction, are to be harmonised cooperatively in accordance with the European integration idea and relaxed through mutual consideration.

58 *Ultra vires* review may only be exercised in a manner which is open towards European law ….

59 (1) The Union understands itself as a legal community; it is in particular bound by the principle of conferral and by the fundamental rights, and it respects the constitutional identity of the Member States … According to the legal system of the Federal Republic of Germany, the primacy of application of Union law is to be recognised and it is to be guaranteed that the control powers which are constitutionally reserved for the Federal Constitutional Court are only exercised in a manner that is reserved and open towards European law.

[79] M Payandeh, 'Constitutional Review of EU law after Honeywell: Contextualizing the Relationship between the German Constitutional Court and the EU Court of Justice' (2011) 48 CMLRev 9.

60 This means for the *ultra vires* review at hand that the Federal Constitutional Court must comply with the rulings of the Court of Justice in principle as a binding interpretation of Union law. Prior to the acceptance of an *ultra vires* act on the part of the European bodies and institutions, the Court of Justice is therefore to be afforded the opportunity to interpret the Treaties, as well as to rule on the validity and interpretation of the legal acts in question, in the context of preliminary ruling proceedings according to Article 267 TFEU. As long as the Court of Justice did not have an opportunity to rule on the questions of Union law which have arisen, the Federal Constitutional Court may not find any inapplicability of Union law for Germany …

61 *Ultra vires* review by the Federal Constitutional Court can moreover only be considered if it is manifest that acts of the European bodies and institutions have taken place outside the transferred competences … A breach of the principle of conferral is only manifest if the European bodies and institutions have transgressed the boundaries of their competences in a manner specifically violating the principle of conferral (Article 23.1 of the Basic Law), the breach of competences is in other words sufficiently qualified … This means that the act of the authority of the European Union must be manifestly in violation of competences and that the impugned act is highly significant in the structure of competences between the Member States and the Union with regard to the principle of conferral and to the binding nature of the statute under the rule of law …

This ruling by the BVerfG renders it far more difficult for any claimant to sustain a challenge to the supremacy of EU law based on the argument that the EU exceeded its competence and hence acted *ultra vires*.[80] The BVerfG makes clear that it will regard any such action as inadmissible unless the ECJ has been given the opportunity to rule on the issue: paragraph 60. The BVerfG also stresses in paragraph 61 that *ultra vires* review requires the claimant to show that any excess of power by the EU was 'manifestly' in violation of its competence and that the impugned act was 'highly significant' in the structure of competence between the Member States and the EU. It is noteworthy that Judge Landau dissented on the grounds that the majority judgment made it excessively difficult to conclude that the EU had acted *ultra vires*, and that the majority had in this respect departed from the *Lisbon* ruling considered below.

Thus, in the same way that the BVerfG softened its fundamental rights qualification to the acceptance of EU supremacy, it has also qualified the *ultra vires* lock that it initially enunciated in the *Brunner* case.

(v) *Limits to Acceptance of Supremacy: The Identity Lock*

A related, but distinct, limit to the acceptance of EU supremacy within the German legal order was fashioned in the BVerfG's ruling on the compatibility of the Lisbon Treaty with the German Constitution. In its *Lisbon* decision, the BVerfG reiterated the existence of the *ultra vires* lock, based on excess of competence, although it should be noted that the *Honeywell* ruling considered above is more recent, and hence must be regarded as the BVerfG's latest word on that limit. The BVerfG in the *Lisbon* ruling however also articulated what has become known as the 'identity lock'. The following extract begins after the BVerfG had reaffirmed its authority to engage in *ultra vires* review.

2 BvE, 2/08, 30 June 2009

THE BUNDESVERFASSUNGSGERICHT (BVERFG)

240 Furthermore, the Federal Constitutional Court reviews whether the inviolable core content of the constitutional identity of the Basic Law pursuant to Article 23.1 third sentence in conjunction with

[80] Voßkuhle (n 60) 194–195.

Article 79.3 of the Basic Law is respected … In this respect, the guarantee of national constitutional identity under constitutional and under Union law goes hand in hand in the European legal area. The identity review makes it possible to examine whether, due to the action of European institutions, the principles under Article 1 and Article 20 of the Basic Law, declared inviolable in Article 79.3 of the Basic Law, have been violated. This ensures that the primacy of application of Union law only applies by virtue and in the context of the constitutional empowerment that continues in effect.

…

249 European unification on the basis of a treaty union of sovereign states may, however, not be achieved in such a way that not sufficient space is left to the Member States for the political formation of the economic, cultural and social living conditions. This applies in particular to areas which shape the citizens' living conditions, in particular the private sphere of their own responsibility and of political and social security, protected by fundamental rights, as well as to political decisions that rely especially on cultural, historical and linguistic perceptions and which develop in public discourse in the party political and parliamentary sphere of public politics. Essential areas of democratic formative action comprise, *inter alia*, citizenship, the civil and the military monopoly on the use of force, revenue and expenditure including external financing and all elements of encroachment that are decisive for the realisation of fundamental rights, above all in major encroachments on fundamental rights such as deprivation of liberty in the administration of criminal law or placement in an institution. These important areas also include cultural issues such as the disposition of language, the shaping of circumstances concerning the family and education, the ordering of the freedom of opinion, press and of association and the dealing with the profession of faith or ideology.

…

252 Particularly sensitive for the ability of a constitutional state to democratically shape itself are decisions on substantive and formal criminal law (1), on the disposition of the monopoly on the use of force by the police within the state and by the military towards the exterior (2), fundamental fiscal decisions on public revenue and public expenditure, the latter being particularly motivated, *inter alia*, by social policy considerations (3), decisions on the shaping of living conditions in a social state (4) and decisions of particular cultural importance, for example on family law, the school and education system and on dealing with religious communities (5).

The BverfG's *Lisbon* judgment is long and contains much else that is relevant to the relationship between the German and EU legal orders. It generated, not suprisingly, significant academic comment.[81] Much of the commentary was critical of the identity lock fashioned in the case.

D Halberstam and C Möllers, The German Constitutional Court says 'Ja zu Deutschland!'[82]

For quite a long time a strange commonplace in German constitutional scholarship has been the lack of any *Staatsaufgabenlehre*, that is, a theory of what necessary tasks the state must fulfill. It was hoped that scholars might define this field in a purely conceptual effort without any reference to the necessarily open democratic process. This dream of a conceptual deduction of the being or essence of the state

[81] F Schorkopf, 'The European Union as an Association of Sovereign States: Karlsruhe's Ruling on the Treaty of Lisbon' (2009) 10 German LJ 1219; D Halberstam and C Möllers, 'The German Constitutional Court says "Ja zu Deutschland!"' (2009) 10 German LJ 1241; D Thym, 'In the Name of Sovereign Statehood: A Critical Introduction to the *Lisbon* Judgment of the German Constitutional Court' (2009) 46 CMLRev 1795; F Mayer, '"Rashomon in Karlsruhe" The German Constitutional Court's Lisbon Decision and the Changing Landscape of European Constitutionalism', forthcoming (2011) I-CON.

[82] (N 81) 1249–1250.

Wesen and its agendas never took concrete form. Instead, it remained a nostalgic sentiment about what might have been a complete theory of the state.

It is no accident that such a theory has never been written. In a different context, the United States Supreme Court has also struggled with, and retreated from, comprehensively defining what constitutes traditional areas of state regulation. An open democratic process makes it difficult to define in any comprehensive way what areas of legislation form the state's 'necessary' tasks. To be sure, any such theory would, indeed, help us draw meta-constitutional lines around the power of the state. Any such doctrine could then protect the state from various forms of disaggregation, privatization, as well as Europeanization and internationalization. Still, in Germany, the dream of a *Staatsaufgabenlehre* project has long been forgotten.

Forgotten? Suddenly and without precedent the Court's *Lisbon Case* develops its own *Staatsaufgabenlehre*. The Court defines five areas in which the state must take a role: Criminal law (substantial and procedural), war and peace, public expenditures and taxation, welfare, and culture and religion. These tasks are, according to the Court, 'especially sensitive for the ability of a constitutional state to democratically shape itself.' But is there any theory or argument behind this list? We find none in the opinion. The Court merely refers to its own imagination of past sovereignty. The opinion asserts that '*seit jeher*,' 'since ever,' the state has fulfilled these tasks as an expression of its sovereignty.

This is obviously not the case. The welfare function of the European nation state has often been described as the beginning of the end of the idea of sovereignty, as the point of dissolution of the state into society. Religion was a decisive topic of the Westphalian Treaty System that stands at the very beginning of the modern concept of sovereignty in Public International Law, a concept the Court otherwise explicitly endorses. Religion did not belong to state sovereignty at the very moment of its invention. On the other hand, what about the omission of Civil Law in the list? Despite the fact that German BGB, the Civil Code, was the central codification of the newly founded German nation-state, the Court does not even mention this area of law as being special to the German state's identity or sovereignty. And what about the control over currency—a field that often has been mentioned as a classical prerogative of the state? From either a historical or a systematic perspective, the list makes no sense.

Then again, why does the Court classify just the five areas on its list as necessary parts to state sovereignty? The answer is simple. The 'theory' of the Court is a *post hoc* argument in support of a preordained result.

(vi) *Limits to Acceptance of Supremacy: Locks, Limits, and Consequences*

The German jurisprudence has provided much food for thought concerning limits to the acceptance of EU supremacy in one Member State. A few words by way of reflection may be helpful in assessing this case law.

The simplest facts are the easiest to forget. All actions have consequences. This trite proposition applies just as much to legal decisions as to any other. If a legal system decides to apply locks then it must determine their content and how to apply them. This trite proposition leads to a less obvious one. The very language of locks is indicative of asymmetrical power: someone imposes constraints on someone else. The reality is more complex, at least in this context. The reason is not hard to divine. The creator of the lock has to live with the very constraint that it has fashioned. Tough talk, whether by national courts or legislators, leading to 'tight locks', has consequences for the author. The tighter the lock, the more demanding it is for the creator, not just for the person or institution constrained. It is fine if the creator of the lock really does wish to follow through the implications of its constraint. It is problematic if the creator becomes equivocal about the content and application of the lock that it has created. It then has to find ways of 'backing off' or 'softening' the constraint that it has devised, without thereby losing credibility and opening itself to the criticism that its tough talk is not matched by tough action.

The German jurisprudence reveals how the imposition of locks can be controversial or problematic, in terms of content and application. Thus, in terms of content, we have seen that the empirical and conceptual foundation of the recent identity lock has been questioned by German scholars. The application of any such locks is equally important. The national court should be wary of condemning the ECJ for 'activist' interpretation of the kind that the national court itself regularly engages in at domestic level.[83] The German courts have in any event softened limits to the acceptance of EU supremacy based on fundamental rights and competence/*ultra vires*, rendering it far more difficult for a claimant to succeed on these grounds.

It remains to be seen how the identity lock is applied in subsequent case law. Claimants are likely to challenge EU legislation before the German courts on the ground that it transgresses one of the identity limits listed in the judgment. The *Lisbon* ruling may then prove a dilemma for the German Federal Constitutional Court which created the identity lock. The BVerfG will be faced with a difficult choice. It can take the identity lock seriously, with the consequence that it thereby comes into repeated conflict with the EU in relation to the five areas listed in the judgment. It can, alternatively, soften the application of the identity lock in ways analogous to the modification of the *ultra vires* lock, with the consequence that it is criticized for not 'taking locks seriously'. It remains therefore to be seen whether its 'bark is worse than its bite'. The following extract, from the President of the Federal Constitutional Court, indicates that the BVerfG may well attempt to soften this lock too.

A Voßkuhle, Multilevel Cooperation of the European Constitutional Courts, *Der Europäische Verfassungsgerichtsverbund*[84]

Just as only the Federal Constitutional Court can exercise the concrete review of statutes according to Article 100 of the Basic Law, which protects the parliamentary legislature, so too is it solely for the Federal Constitutional Court to review whether the inviolable core content of the constitutional identity of the Basic Law pursuant to Article 23(1) third sentence in conjunction with Article 79(3) of the Basic Law is respected. This review power, which is rooted in German constitutional law, is at the same time corroborated by European Union law, as it goes 'hand in hand' with the protection of national constitutional identity and the principle of sincere cooperation in accordance with the European Union Treaty in its Lisbon version. Thus, the 'bridge' between Union law and German national law continues to be secured by the railing of continuing German constitutional empowerment. However, the Federal Constitutional Court, when exercising this review, will continue to observe the principle of the Basic Law's openness towards European integration, thereby continually taking into account the responsibility for integration which is due by the court as it is by all other German constitutional bodies.

(vii) *Summary*

i. The German courts accept the supremacy of EU law, subject to the limits considered above.

ii. The conceptual foundation for acceptance of supremacy is primarily Articles 23.1, 24, and 25 of the German Constitution, but the German Federal Constitutional Court has also adverted to some aspects of the *communautaire* reasoning of the ECJ.

iii. The German courts continue to possess jurisdiction where EU law impinges on fundamental rights protected by the German Constitution, but any claimant will have to show that the protection afforded by EU law is generally deficient before the German courts will exercise their jurisdiction.

[83] P Craig, 'The ECJ and *Ultra Vires* Action: A Conceptual Analysis' (2011) 48 CMLRev 395.
[84] (N 60) 196.

iv. The German courts also regard themselves as possessing the ultimate *Kompetenz-Kompetenz* to decide whether EU action is within the scope of EU competence. The more recent case law indicates however that they would only exercise such power in cases where the competence exercised by an EU institution was clearly in excess of that accorded by the Treaties, and then only after the ECJ has been given the opportunity to rule on the contested EU provision.

v. The German courts have more recently fashioned a limit to acceptance of EU law, where this impinges on constitutional identity. It remains to be seen how this limit is applied in practice.

(c) ITALY

(i) *Acceptance of Supremacy*

The Italian courts signalled acceptance of the supremacy of EU law, albeit subject to qualification, at a relatively early stage.

Frontini v Ministero delle Finanze
[1974] 2 CMLR 372

The plaintiff brought proceedings to challenge the applicability of increased agricultural levies, which had been imposed by EC Regulation, on the import of meat into Italy. Frontini argued that the Regulation was inapplicable in Italy, and the case was transmitted to the Italian Constitutional Court to determine the constitutional legitimacy of the Italian EEC Treaty Ratification Act 1957. That Act made Article 249 of the Treaty, providing for the direct applicability of Community regulations, effective in Italy.

THE COURT[85]

The EEC Treaty Ratification Act 1957, whereby the Italian Parliament gave full and complete execution to the Treaty instituting the EEC, has a sure basis of validity in Article 11 of the Constitution whereby Italy 'consents, on condition of reciprocity with other states, to limitations of sovereignty necessary for an arrangement which may ensure peace and justice between the nations' and then 'promotes and favours the international organizations directed to such an aim'. . . .

. . . It is hardly necessary to add that by Article 11 of the Constitution limitations of sovereignty are allowed solely for the purpose of the ends indicated therein, and it should therefore be excluded that such limitations of sovereignty, concretely laid out in the Rome Treaty, signed by countries whose systems are based on the principle of the rule of law and guarantee the essential liberties of citizens, can nevertheless give the organs of the EEC an unacceptable power to violate the fundamental principles of our constitutional order or the inalienable rights of man. And it is obvious that if ever Article 189 had to be given such an aberrant interpretation, in such a case the guarantee would always be assured that this Court would control the continuing compatibility of the Treaty with the above mentioned fundamental principles.

Frontini was followed in 1984 by *Granital*,[86] in which the Italian Constitutional Court accepted that, in order to give effect to the supremacy of EU law, Italian courts must be prepared where necessary to disregard conflicting national law and to apply EU law directly. The national law would not be

[85] [1974] 2 CMLR 372, 384.

[86] Dec 170 of 8 June 1984 in *SpA Granital v Amministrazione delle Finanze*. For an unofficial translation see G Gaja (1984) 21 CMLRev 756.

abrogated, but rather ignored insofar as the field in which it operated had been pre-empted by EU law. The national provisions would however survive and still govern the relevant subject matter in areas beyond the scope of the EU norm.

A pro-European stance of the Italian courts is also evidenced by the fact that the Corte costituzionale decided in 2008 that it was a 'court or tribunal of a Member State' for the purposes of making a reference to the ECJ under Article 267 TFEU, thereby reversing its position in this regard, at least in relation to certain types of case brought before it.[87]

(ii) *Conceptual Basis for Acceptance of Supremacy*

The conceptual basis for acceptance of the supremacy of EU law is a live issue in all Member States. The Italian courts have grounded such acceptance, as is evident from *Frontini*, on Article 11 of the Italian Constitution, which provides that 'Italy agrees, on conditions of equality with other States, to the limitations of sovereignty that may be necessary to a world order ensuring peace and justice among the Nations'. This formed the basis for the Italian courts' acceptance of the supremacy of EU law, although, as in the case of other Member States, this acceptance has not been unconditional.[88]

(iii) *Limits to Acceptance of Supremacy*

It is clear from *Frontini* that, while accepting the direct effect of EU law and confirming Italy's constitutional competence to ratify the Treaties, the Constitutional Court expressed similar reservations to those of the German BverfG, and confirmed that it would continue to review the exercise of power by the 'organs of the EEC' to ensure that there was no infringement of fundamental rights or of the basic principles of the Italian constitutional order. Moreover in *Granital* the Italian Constitutional Court was prepared to adjudicate not simply on questions of conflict between specific EU measures and fundamental Italian constitutional rights, but also on the division of competence between national law and EU law.[89] The possibility of conflict was demonstrated in *Fragd*,[90] in which the Italian Constitutional Court considered that an EU measure would not be applied in Italy if it contravened a fundamental principle of the Italian Constitution concerning human rights protection.

G Gaja, New Developments in a Continuing Story: The Relationship between EEC Law and Italian Law[91]

> While the *Frontini* decision by the Constitutional Court has often been viewed as a significant example of the willingness on the part of national courts to subject EEC legislation to constitutional rules concerning the protection of fundamental rights, little has happened so far to justify this evaluation....
>
> In *Spa Fragd* v. *Amministrazione delle Finanze*, the Court examined whether a system, such as that applying to preliminary rulings on validity of Community acts, whereby a declaration of invalidity may not produce any effect in the proceedings before the referring court, is consistent with the constitutional principles on judicial protection... The Constitutional Court's main aim was to try and support the view that, as a matter of Community law, rulings should always have some effects in those proceedings. Possibly as a way of persuading the Court of Justice of the need to accept this solution,

[87] Decs 102 and 103/2008.

[88] The Corte costituzionale denied that the revised Art 117(1) of the Italian Constitution replaced Art 11 as the constitutional basis for EU law in Italy: Decs 348 and 349/2007.

[89] R Petriccione, 'Italy: Supremacy of Community Law over National Law' (1986) 11 ELRev 320.

[90] *Spa Fragd v Amministrazione delle Finanze*, Dec 232 of 21 Apr 1989 (1989) 72 RDI.

[91] (1990) 27 CMLRev 83, 93–94.

the Constitutional Court also viewed the problem from the perspective of the constitutional protection of fundamental rights. The Court said:

> . . .
>
> In substance, everyone's right to have a court and judicial proceedings for each dispute would be emptied of its essential content if, when a court doubts the validity of a rule which should be applied, the answer came from the court to whom the question has to be referred that the rule is in fact void, but that this should not be relevant for the dispute before the referring court, which should nevertheless apply the rule that is declared to be void.
>
> Contrary to the State Attorney's view, one could not invoke the primary need for the uniform application of Community law and for certainty of law against the possible violation of a fundamental right.
>
> . . .

Unlike *Frontini*, the *Fragd* decision shows that the Constitutional Court is willing to test the consistency of individual rules of Community law with the fundamental principles for the protection of human rights that are contained in the Italian Constitution. This significantly widens the way for the exercise by the Constitutional Court of a control which has hitherto been only theoretical.

(iv) *Summary*

i. The Italian courts have accepted the supremacy of EU law, subject to the qualifications mentioned below.

ii. The supremacy of EU law is based on Article 11 of the Italian Constitution, and not the *communautaire* reasoning of the ECJ.

iii. The Italian courts do not accept that EU law has primacy over the Italian Constitution, and they retain ultimate authority over the issue of whether EU law infringes fundamental rights.

iv. It seems moreover that the Italian courts regard themselves as possessing the ultimate *Kompetenz-Kompetenz*, being prepared in principle to adjudicate on the division of competence between national law and EU law.[92]

(D) THE UNITED KINGDOM

(i) *Acceptance of Supremacy*

The central obstacle to acceptance by the UK of the supremacy of EU law is the constitutional principle of parliamentary sovereignty, which in its traditional formulation holds that Parliament has the power to do anything other than to bind itself for the future.[93] This means that if there is a clash between a later and an earlier norm then the latter is taken to be impliedly repealed or disapplied by the former. Moreover, the UK's dualist approach to international law means that international treaties ratified by the United Kingdom are not part of the domestic law of the UK, and in

[92] P Ruggeri Laderchi, 'Report on Italy' in Slaughter *et al* (n 41) ch 5, points out the procedural problems for Italian courts wishing to exercise a form of *ultra vires* review of EU acts. See also A Adinolfi, 'The Judicial Application of Community Law in Italy (1981–1997)' (1998) 35 CMLRev 1313, 1314–1325.

[93] P Craig, 'United Kingdom Sovereignty after *Factortame*' (1991) 11 YBEL 221; P Craig, 'Britain in the European Union' in J Jowell and D Oliver (eds), *The Changing Constitution* (Oxford University Press, 7th edn, 2011) ch 4.

order to be enforceable at the domestic level they must be incorporated by an Act of Parliament. In theory therefore the sovereignty principle makes it very difficult for the supremacy of EU law over later UK legislation to be guaranteed, since the Act of Parliament which incorporates EU law and makes it domestically binding seems vulnerable to any later Act of Parliament which contravenes or contradicts it, expressly or impliedly.

It was nevertheless decided, after the EC Treaties were ratified by the UK in 1972, to give internal legal effect to Community law by means of an Act of Parliament: the European Communities Act 1972, section 2(1) of which provides:

> All such rights, powers, liabilities, obligations and restrictions from time to time created or arising by or under the Treaties, and all such remedies and procedures from time to time provided for by or under the Treaties, as in accordance with the Treaties are without further enactment to be given legal effect or used in the United Kingdom shall be recognized and available in law, and be enforced, allowed and followed accordingly; and the expression 'enforceable Community right' and similar expressions shall be read as referring to one to which this subsection applies.

Section 2(1) makes the concept of direct effect a part of the UK legal system. It deems law which under the EU Treaties is to be given immediate legal effect to to be directly enforceable in the UK. Accordingly UK courts, which on the orthodox domestic approach to international law may not directly enforce a provision of an international treaty or a measure passed thereunder, are directed by section 2(1) to enforce any directly effective EU measures. There is no need for a fresh act of incorporation to enable UK courts to enforce each EU Treaty provision, regulation, or directive which according to EU law has direct effect.

Section 2(2) provides for the implementation of EU obligations, even when they are intended to replace national legislation and Acts of Parliament, by means of an Order in Council or statutory instrument rather than by primary legislation only. Section 2(4) then provides:

> The provision that may be made under subsection (2) above includes, subject to Schedule 2 to this Act, any such provision (of any such extent) as might be made by Act of Parliament, and any enactment passed or to be passed, other than one contained in this Part of this Act, shall be construed and have effect subject to the foregoing provisions of this section; . . .

The Schedule to which the provision refers sets out a number of powers, such as increasing taxation or legislating retroactively, which cannot be exercised by Order in Council or by delegated legislation, even if they are necessary to comply with an EU obligation. For these powers it seems an Act of Parliament will be needed. But the part of section 2(4) which has received most attention is the clause beginning 'any enactment passed or to be passed', which became prominent when the courts sought a way to reconcile new obligations under EU law with the traditional approach to statutory interpretation. Section 3 of the Act then provides:

> For the purposes of all legal proceedings any question as to the meaning or effect of any of the Treaties, or as to the validity, meaning or effect of any Community instrument, shall be treated as a question of law (and, if not referred to the European Court, be for determination as such in accordance with the principles laid down by and any relevant decision of the European Court or any court attached thereto).

This provision makes ECJ decisions on the meaning and effect of EU law authoritative in UK courts, giving them, to use domestic legal language, the force of precedent.

The leading decision on the relationship between EU law and UK law is *Factortame*, which will be considered below. Prior to that decision the judicial approach varied. The predominant approach, despite early judicial comments to the contrary,[94] was to use principles of construction to assume that when Parliament enacted the 1972 European Communities Act it intended any ambiguity or inconsistency with EU law to be resolved by giving primacy to EU law,[95] provided that there was no indication that Parliament expressly intended to depart from a provision of EU law, the assumption being that if the latter were to occur then the courts would follow the will of Parliament.[96] Thus where an apparently conflicting provision of English law was capable of being read in conformity with EU law, this was the proper approach to take.[97] In some cases the courts assumed that this approach would only apply where the provision of EU law was directly effective.[98] However in *Litster*,[99] *Pickstone*,[100] and *Webb*[101] the House of Lords was prepared to construe domestic statutes in conformity with EU law which was not directly effective, even where that construction was not in accordance with the literal or *prima facie* meaning of the statutes. This was so even where the national statute was introduced to implement a non-directly effective directive. We can now consider *Factortame*.[102]

Factortame Ltd v Secretary of State for Transport (No 2)
[1991] 1 AC 603

The applicants were companies incorporated under UK law, but the majority of the directors and shareholders were Spanish. The companies were in the business of sea fishing and their vessels were registered as British under the Merchant Shipping Act 1894. The statutory regime was altered by the Merchant Shipping Act 1988. Vessels that had been registered under the 1894 Act had to register under the new legislation. 95 vessels failed to meet the new criteria and the applicants argued that the relevant parts of the 1988 Act were incompatible with, *inter alia*, Articles 52, 58, and 221 of the EC Treaty. The first *Factortame* case[103] was concerned with whether interim relief should be available against the Crown, in order to protect the applicants' financial interests if they were prevented from fishing pending the final judgment. Such relief was not available in UK law at that time, but the ECJ ruled that the absence of such relief was itself a breach of Community law.[104] This was accepted by the House of Lords in *Factortame (No 2)*, from which the following extract is taken.

LORD BRIDGE[105]

Some public comments on the decision of the Court of Justice, affirming the jurisdiction of the courts of member states to override national legislation if necessary to enable interim relief to be granted in protection of rights under Community law, have suggested that this was a novel and dangerous invasion by a Community institution of the sovereignty of the United Kingdom Parliament. But such

comments are based on a misconception. If the supremacy within the European Community of Community law over the national law of member states was not always inherent in the EEC Treaty it was certainly well established in the jurisprudence of the Court of Justice long before the United Kingdom joined the Community. Thus, whatever limitation of its sovereignty Parliament accepted when it enacted the European Communities Act 1972 was entirely voluntary. Under the terms of the 1972 Act it has always been clear that it was the duty of a United Kingdom court, when delivering final judgment, to override any rule of national law found to be in conflict with any directly enforceable rule of Community law. Similarly, when decisions of the Court of Justice have exposed areas of United Kingdom statute law which failed to implement Council directives, Parliament has always loyally accepted the obligation to make appropriate and prompt amendments. Thus there is nothing in any way novel in according supremacy to rules of Community law in those areas to which they apply and to insist that, in the protection of rights under Community law, national courts must not be inhibited by rules of national law from granting interim relief in appropriate cases is no more than a logical recognition of that supremacy.

The acceptance by UK courts of the supremacy of EU law was further evidenced by the *EOC* case where the House of Lords stated that there was no constitutional barrier to an applicant before any UK court, and not just the House of Lords, seeking judicial review of primary legislation which was alleged to be in breach of EU law.

Equal Opportunities Commission v Secretary of State for Employment
[1994] 1 WLR 409

[Note Lisbon Treaty renumbering: Arts 7, 52, and 177 are now Arts 18, 49, and 267 TFEU]

The Equal Opportunities Commission (EOC) considered that the Employment Protection (Consolidation) Act of 1978 on part-time workers was contrary to Community law. In a letter from the Secretary of State for Employment to the EOC, the Secretary refused to accept that the UK was in breach of EC law. The EOC sought judicial review of the Secretary of State's decision. The Secretary of State argued that the English court had no jurisdiction to declare that the UK or the Secretary of State was in breach of any obligations under Community law.

LORD KEITH[106]

The question is whether judicial review is available for the purpose of securing a declaration that certain United Kingdom primary legislation is incompatible with Community law.... In the *Factortame* series of cases... the applicants for judicial review sought a declaration that the provisions of Part II of the Merchant Shipping Act 1988 should not apply to them on the ground that such application would be contrary to Community law, in particular Articles 7 and 52 of the EEC Treaty.... The Divisional Court, under Article 177 of the Treaty, referred to the Court of Justice of the European Communities a number of questions, including the question whether these restrictive conditions were compatible with Articles 7 and 52 of the Treaty. The European Court... answered that question in the negative, and although the final result is not reported, no doubt the Divisional Court in due course granted a declaration accordingly. The effect was that certain provisions of United Kingdom primary legislation were held to be invalid in their purported application to nationals of Member States of the European Community, but without any prerogative order being available to strike down the legislation in question, which of course remained

[106] [1994] 1 WLR 409, 418–419.

valid as regards nationals of non-member States. At no stage in the course of the litigation, which included two visits to this House, was it suggested that judicial review of legislation was not available for obtaining an adjudication upon the validity of the legislation in so far as it affected the applicants.

The *Factortame* case is thus a precedent in favour of the EOC's recourse to judicial review for the purpose of challenging as incompatible with Community law the relevant provisions of the 1978 Act.

The following extract summarizes the position in UK law concerning the acceptance of the supremacy of EU law.

P Craig, Britain in the European Union[107]

The substantive impact of *Factortame, EOC* and *Thoburn* may be described as follows.

First, in doctrinal terms these decisions mean that the concept of *implied repeal*, or *implied disapplication*, under which inconsistencies between later and earlier norms were resolved in favour of the former, will, subject to what is said below, no longer apply to clashes concerning EU and national law....

Second, if Parliament ever does wish to derogate from its EU obligations then it will have to do so *expressly and unequivocally*. The reaction of our national courts to such an unlikely eventuality remains to be seen. In principle two options would be open to the national judiciary. Either they could choose to follow the latest will of Parliament, thereby preserving some remnant of traditional orthodoxy on sovereignty. Or they could argue that it is not open to our legislature to pick and choose which obligations to subscribe to while still remaining within the EU....

Third, the supremacy of EU law over national law *operates in areas where EU law is applicable*, as is made clear from the dictum of Lord Bridge set out above... The problem being addressed here is often referred to as *Kompetenz-Kompetenz*: who has the ultimate authority to decide whether a matter is within the competence of the EC? The ECJ may well believe that it is the ultimate decider of this issue. However, national courts may not always be content with this arrogation of authority....

(ii) *Conceptual Basis for Acceptance of Supremacy*

While the UK courts have accepted the supremacy of EU law, the conceptual foundation for their decisions has been debated. In *Factortame (No 2)* Lord Bridge adverted to reasoning used by the ECJ in justifying according supremacy to EU law, as exemplified by his reference to supremacy being inherent in the nature of the Treaty. Lord Bridge however also premised the UK's acceptance of supremacy on a UK statute, the 1972 European Communities Act.

It was the domestic acceptance of supremacy that was emphasized in *Thoburn*.[108] Laws LJ held that the constitutional relationship between the UK and the EU was not to be decided by the ECJ's jurisprudence, which could not itself entrench EU law within national law. The constitutional relationship between the EU and the UK, including the impact of EU membership on sovereignty, was to be decided by the common law in the light of any domestic statutes. The common law had, said Laws LJ, modified the traditional concept of sovereignty, by creating exceptions to the doctrine of implied repeal. Ordinary statutes were subject to the doctrine of implied repeal. What Laws LJ referred to as 'constitutional statutes', which conditioned the legal relationship between citizen and state in some overarching manner, or which dealt with fundamental constitutional rights, were not subject to the

[107] Craig, 'Britain in the European Union' (n 93).
[108] *Thoburn v Sunderland City Council* [2003] QB 151.

doctrine of implied repeal. The repeal of such a statute, or its disapplication in a particular instance, could occur only if there were some 'express words in the later statute, or by words so specific that the inference of an actual determination to effect the result contended for was irresistible'.[109] The ECA 1972 was regarded as just such a constitutional statute.

The following extract considers the ways in which supremacy of EU law has been conceptualized in the UK.

P Craig, Britain in the European Union[110]

Commentators have been divided as to how best to conceptualize the impact of the courts' jurisprudence.

It is possible to rationalize what the courts have done as a species of *statutory construction*. . . . All would agree that if a statute can be reconciled with an EU norm through construing the statutory words without unduly distorting them then this should be done, more especially when the statute was passed to effectuate a directive. However the species of statutory construction being considered here is more far-reaching. On this view accommodation between national law and EU law is attained through a rule of construction to the effect that inconsistencies *will* be resolved in favour of the latter *unless* Parliament has indicated clearly and ambiguously that it intends to derogate from EU law. The degree of linguistic inconsistency between the statute and the EU norm is not the essential point of the inquiry. Provided that there is no unequivocal derogation from EU law then it will apply, rather than any conflicting domestic statute. . . . The construction view is said to leave the essential core of the traditional view of legal sovereignty intact, in the sense that it is always open to a later Parliament to make it unequivocally clear that it wishes to derogate from EU law. . . . This approach is, however, problematic. . . .

A second way to conceptualize what the courts have done is to regard it as a *technical legal revolution*. This is the preferred explanation of Sir William Wade who sees the courts' decisions as modifying the ultimate legal principle or rule of recognition on which the legal system is based. On this view the 'rule of recognition is itself a political fact which the judges themselves are able to change when they are confronted with a new situation which so demands'. Such choices are made by the judiciary at the point where the law 'stops'.

There is however a third way in which to regard the courts' jurisprudence. This is to regard decisions about supremacy as being based on *normative arguments of legal principle the content of which can and will vary across time*. . . . On this view there is no *a priori* inexorable reason why Parliament, merely because of its very existence, must be regarded as legally omnipotent. The existence of such power, like all power, must be justified by arguments of principle which are normatively convincing. Possible constraints on Parliamentary omnipotence must similarly be reasoned through and defended on normative grounds. This approach fits well with the reasoning of Lord Bridge in the second *Factortame* case.

(iii) *Limits to Acceptance of Supremacy*

The discussion thus far has shown that notwithstanding initial concerns as to the difficulties of reconciling EU membership and traditional notions of sovereignty the UK has, in reality, experienced fewer problems in accepting EU supremacy than many other Member States. The UK until recently had moreover shown less inclination to articulate limits on the acceptance of EU supremacy than its

[109] Ibid [63].
[110] Craig, 'Britain in the European Union' (n 93).

continental counterparts. There were some dicta, such as those of Laws LJ who sounded a warning note redolent of the earlier German jurisprudence, to the effect that the ECA 1972 might not give overriding effect to an EU measure which was repugnant to a fundamental or constitutional right guaranteed by UK law.[111] There was, subject to this, little to talk about within this section insofar as the UK was concerned.

This will change markedly assuming that the European Union Bill 2011 becomes a statute. The framers of the legislation were influenced by the existence of 'locks' introduced by other Member States, notably Germany. The UK government, dominated by the Conservative Party, felt that if Germany had such locks, then so too should the UK. To that end the European Union Bill 2011 introduced a far-reaching regime of statutory and referendum 'locks'. Space precludes detailed examination, which can be found elsewhere.[112] Suffice it to say the following for present purposes. The European Union Bill 2011 is not, subject to what will be said below, directly concerned with constraints on the supremacy of EU law. It does however contain far-reaching limits to the acceptance of Treaty change and certain other EU decisions within the UK.

It contains a regime of referendum and statutory locks. Section 2 deals with Treaty amendment pursuant to the ordinary revision procedure in Article 48(2)–(5) TEU, and specifies that there must be an Act of Parliament plus a positive vote in a national referendum, unless the exemption condition applies. Section 3 sets the same conditions for Treaty change undertaken through the Simplified Revision Procedure in Article 48(6) TEU, unless the exemption or significance condition applies. The exemption condition renders a referendum unnecessary if the Treaty change does not fall within section 4 of the Act, but this will rarely occur given the breadth of that section. The significance condition makes a referendum unnecessary if the change made by the Simplified Revision Procedure comes within only section 4(1)(i) or (j),[113] and such change is not significant for the UK.

Section 6 is concerned primarily with changes to Treaty voting rules and procedure for enacting legislation pursuant to passerelle provisions in the TEU and TFEU. In such instances the minister cannot vote in favour of such change unless the EU draft decision is approved by Act of Parliament, plus a positive vote in a national referendum. Section 7 stipulates that a minister may not confirm approval of certain EU decisions unless they are approved by Act of Parliament. Section 8 is concerned with decisions made pursuant to Article 352 TFEU. A minister cannot vote in favour of an Article 352 draft decision unless it is approved by Act of Parliament, or in one of the other ways specified in subsections 8(4)–(5). Section 9 requires parliamentary approval for certain other decisions made pursuant to the Treaties.

The obligation to hold a referendum is determined by section 4(1), which covers every conceivable case of extension of competence and/or conferral of power, more especially because section 4(2) states that extension of competence includes the removal of a limitation on a competence. The EU Bill is in this sense 'very British'. The only caveat is section 4(4), which obviates the need to hold a referendum in certain instances, including accession of new Member States. The substantive obligation to hold a referendum is reinforced by the procedural duty in section 5(3), which requires the Minister to state whether in his opinion the Treaty amendment or Article 48(6) decision falls within section 4.

There was much debate during the passage of the legislation concerning what was termed the 'sovereignty clause', in section 18. It provides in effect that 'it is only by virtue of an Act of Parliament that directly applicable or directly effective EU law . . . falls to be recognised and available in law in the United Kingdom'. The legal reality is that section 18 says nothing about the

[111] *Thoburn* (n 108).

[112] P Craig, 'The European Union Act 2011: Locks, Limits and Legality', forthcoming.

[113] European Union Act 2011, s 4(1)(i): the conferring on an EU institution or body of power to impose a requirement or obligation on the United Kingdom, or the removal of any limitation on any such power of an EU institution or body; (j) the conferring on an EU institution or body of new or extended power to impose sanctions on the United Kingdom.

supremacy of EU law over national law in the UK, and is not therefore concerned with 'sovereignty as primacy'. It is concerned with 'sovereignty as dualism'. It reiterates that in a dualist country such as the UK there must be an Act of Parliament which adopts or transforms the EU Treaty into UK law. The European Communities Act 1972, in particular section 2(1), is the gateway for EU law becoming part of UK law. There is moreover no 'legal fight' with the EU *vis-à-vis* this issue, since the application of EU law within a national legal order is predicated on that legal order being part of the EU, as determined by the constitutional requirements of that state.[114]

(iv) *Limits to Acceptance of Supremacy: Locks, Limits, and Consequences*

There are significant legal problems concerning the interpretation of the European Union Bill 2011, and its compatibility with EU law.[115] There are in addition very real political difficulties that flow from the legislation. It is worth adverting to the propositions made when discussing the German jurisprudence: actions have consequences and locks impose demands on their creator. The 'Germanic locks' were fashioned by the Federal Constitutional Court, which then had power to soften them through subsequent interpretation, which is what it did.

The zeal for a referendum before any form of Treaty change can be accepted in the UK may well come to haunt subsequent UK governments, more especially because the mandatory provisions of the 2011 legislation cannot be softened in the same way. It can, to be sure, be amended, but this does not change the force of the preceding point. It mandates a referendum for pretty much every conceivable Treaty change, large or small. It is doubtful whether our European partners will view with equanimity the prospect of 'sitting on' draft decisions while the UK enacts the relevant statute and organizes the referendum. It is equally doubtful whether they will be content with the delays and possible vetoes on Treaty reform when such amendment is deemed necessary.

This adverse reaction is likely to be heightened if such changes are prevented by a negative vote in a referendum when the voter turn-out is small. It is doubtful whether significant numbers of voters will exercise their franchise in relation to many of the issues on which a referendum is mandated by the Act. The task facing those charged with engaging voters to participate in a referendum on whether, for example, a shift to qualified majority voting in relation to enhanced cooperation should be approved will be difficult indeed. The political reality is that voter turn-out will often be low, maybe embarrassingly so. If the vote is negative on a 10 per cent total turnout and blocks the desired change our Treaty partners will not be pleased, nor will they think the result has much in the way of legitimacy. The legal reality under what will be the EU Act is nonetheless that a referendum must be held, and the UK populace may well feel that the cost of a referendum, which is approximately £30–40 million, would be money better spent on schools, education, or health in a time of financial stringency. The 2011 Act may well prove the truth of the old adage: be careful what you wish for because it may just come true.

(v) *Summary*

i. Notwithstanding early doubts whether UK courts would be able to accommodate the supremacy of EU law, they have now done so. A clash between national law and EU law will be resolved in favour of the latter. It is however unclear as yet what the UK courts would do if Parliament sought expressly to derogate from a provision of EU law while still remaining in the EU.

[114] See Craig (n 112) for discussion of two unlikely scenarios in which s 18 could be relevant.
[115] Craig (n 112).

ii. The conceptual foundation for the UK's acceptance of the supremacy of EU law has been primarily the 1972 ECA. There has however been some recognition of the ECJ's own reasoning in this regard.

iii. While the UK does not have a written constitution Laws LJ nonetheless intimated that if EU law were to be repugnant to rights recognized by the UK constitutional order then it might not override the relevant domestic law. In more general terms, the European Union Act 2011 when enacted will place far-reaching constraints before proposed Treaty reform and certain other EU decisions can take effect within the UK.

iv. There has been no UK case directly raising the issue of *Kompetenz-Kompetenz*. The decisions according supremacy to EU law are however premised on the assumption that the EU is acting within the scope of its authority. If a real issue of this nature were to arise the UK courts would probably regard themselves as possessing the ultimate *Kompetenz-Kompetenz*, while at the same time according respect to the views of the ECJ on the relevant matter.

(E) POLAND

(i) *Acceptance of Supremacy*

The issues posed by the ECJ's supremacy doctrine are also evident in the jurisprudence of the newer accession countries. Poland can be taken as an example and has accepted the supremacy of EU law over national statute.

K 32/09, 24 Nov 2010

The case concerned challenges to the compatibility of various provisions of the Lisbon Treaty with the Polish Constitution.

CONSTITUTIONAL TRIBUNAL

In the statement of reasons for the judgment in the case K 18/04, the Constitutional Tribunal pointed out that, by approving the binding Constitution, the Nation itself decided that it agrees to the possibility of binding the Republic of Poland with the law enacted by an international organisation or international institution, i.e. with the law other than the treaty law. This is carried out within the limits provided for in ratified international agreements. Moreover, the Nation also granted its consent, in the said referendum, to the fact that the said law would be directly binding in the territory of the Republic of Poland, taking precedence over statutes in the event of a clash of laws. The consent to bind the Republic of Poland with the law enacted in accordance with the rules specified in the primary law has been expressed in the Treaty of Accession, accepted by way of a nationwide referendum; and the constitutionality of the Treaty of Accession was the object of assessment carried out by the Constitutional Tribunal in the case K 18/04.

(ii) *Conceptual Basis for Acceptance of Supremacy*

Poland has, like most of the older Member States, grounded the acceptance of supremacy in national constitutional provisions. In the case of Poland this has been primarily based on Article 90(1) of the Constitution, which provides that the 'Republic of Poland may, by virtue of international agreements,

delegate to an international organization or international institution the competence of organs of State authority in relation to certain matters'.

(iii) *Limits to Acceptance of Supremacy*

The Polish courts have however articulated firm limits on the acceptance of the supremacy of EU law. Article 8(1) provides that the Constitution shall be the supreme law in Poland, and the Polish courts have made clear that EU law does not take precedence over the Constitution.

Polish Membership of the European Union (Accession Treaty)
K 18/04, 11 May 2005

The Polish Constitutional Tribunal considered the constitutionality of Polish membership of the EU. The Tribunal noted that the Polish Constitution did not have a category of 'supranational organization' and that the Accession Treaty between Poland and the EU should be regarded as a form of international agreement. It then continued as follows.

CONSTITUTIONAL TRIBUNAL

7. Article 90(1) of the Constitution authorizes the delegation of competences of State organs only 'in relation to certain matters'. This implies a prohibition on the delegation of all competences of a State authority organ or competences determining its substantial scope of activity, or competences concerning the entirety of matters within a certain field.

8. Neither Article 90(1) nor Article 91(3) authorize delegation to an international organization of the competence to issue legal acts or take decisions contrary to the Constitution, being the 'supreme law of Poland' (Article 8(1)). Concomitantly, these provisions do not authorize the delegation of competences to such an extent that it would signify the inability of the Republic of Poland to continue functioning as a sovereign and democratic State.

...

11. Given its supreme legal force (Article 8(1)), the Constitution enjoys precedence of binding force and precedence of application within the territory of the Republic of Poland. The precedence over statutes of the application of international agreements which were ratified on the basis of a statutory authorization or consent granted (in accordance with Article 90(3)) via the procedure of a nationwide referendum, as guaranteed by Article 91(2) of the Constitution, in no way signifies an analogous precedence of these agreements over the Constitution.

[*The Court noted the possibility of conflict or collision between Community norms and the Polish Constitution, and continued as follows.*]

13. Such a collision would occur in the event that an irreconcilable inconsistency appeared between a constitutional norm and a Community norm, such as could not be eliminated by means of applying an interpretation which respects the mutual autonomy of European law and national law. Such a collision may in no event be resolved by assuming the supremacy of a Community norm over a constitutional norm. Furthermore, it may not lead to the situation whereby a constitutional norm loses its binding force and is substituted by a Community norm, nor may it lead to an application of the constitutional norm restricted to areas beyond the scope of Community law regulation. In such an event the Nation as the sovereign, or a State authority authorized by the Constitution to represent the Nation, would need to decide on: amending the Constitution; or causing modifications within Community provisions; or, ultimately, on Poland's withdrawal from the European Union.

> 14. The principle of interpreting domestic law in a manner 'sympathetic to European law' . . . has its limits. In no event may it lead to results contradicting the explicit wording of constitutional norms or being irreconcilable with the minimum guarantee functions realized by the Constitution. In particular, the norms of the Constitution within the field of individual rights and freedoms indicate a minimum and unsurpassable threshold which may not be lowered or questioned as a result of the introduction of Community provisions.

The approach of the Polish courts is also apparent in the decision of the Constitutional Tribunal concerning the European Arrest Warrant, EAW.[116] The Constitutional Tribunal held that the domestic law giving effect to the EAW was incompatible with Article 55(1) of the Polish Constitution, which prohibited the extradition of a Polish citizen. The Constitutional Tribunal was willing to accept that Article 55(1) should if possible be interpreted to be in conformity with EU law, but nonetheless felt unable to read the legislation giving effect to the EAW as being consistent with Article 55(1). It held that the constitutional prohibition on extradition applied also to the regime of surrender under the EAW. The Constitutional Tribunal acknowledged that the Constitution might have to be amended to ensure compliance with the EU Framework Decision creating the EAW. The time limit for domestic enactment of this Decision had however passed. The Constitutional Tribunal was therefore willing to defer the cancellation of the binding force of the Polish law implementing the EAW for eighteen months, in order to allow the necessary changes to be made to the Constitution.

The Constitutional Tribunal reiterated the supremacy of the Polish Constitution in its Lisbon ruling.[117] The judgment is long and complex. Suffice it to say for the present that it contains a delicate blend. There are pro-EU sentiments, and openness to EU norms. There are also statements concerning the limits of conferral of competence on an external institution that could undermine constitutional identity, and affirmation that Article 90 of the Constitution precludes the conferral of competence to an external institution to determine the limits of such competence.

(iv) *Summary*

i. The Polish courts accept the supremacy of EU law over statute, subject to the qualifications below.

ii. The conceptual foundation for this is to be found in provisions of the Polish Constitution, not the *communautaire* reasoning of the ECJ.

iii. The Polish courts do not accept the supremacy of EU law over the Constitution. The ruling on the EAW indicates the priority accorded to the Polish Constitution. The ruling however also indicates the willingness to bring Polish law into line with the demands of EU law, as evidenced by the way in which the Constitutional Tribunal delayed the cancellation of the national law pending possible amendment of the Constitution.

iv. The Polish courts regard themselves as possessing the ultimate *Kompetenz-Kompetenz*.

[116] Polish Constitutional Tribunal, 27 Apr 2005, No P 1/05; noted by D Leczykiewicz, (2006) 43 CMLRev 1181; A Nußberger, 'Poland: The Constitutional Tribunal on the Implementation of the European Arrest Warrant' (2008) 6 I-CON 162.

[117] K 32/09, 24 Nov 2010; A Lazowski, 'Half Full and Half Empty Glass: The Application of EU Law in Poland (2004–10)' (2011) 48 CMLRev 503.

(F) CENTRAL AND EAST EUROPEAN STATES

The judicial approach in the new Member States from Central and Eastern Europe is not uniform, and space precludes examination of all such jurisprudence. The Czech Constitutional Court has, for example, adopted a nuanced approach. The judgment was in many respects 'Euro-friendly', and the Court accepted that EU protection for fundamental rights was in accord with that in the Czech Republic; at the same time it stipulated some limits on its acceptance of the primacy of EU law.[118] More recently, in its judgments on the Lisbon Treaty, the Czech Constitutional Court distanced itself from the reasoning in the German Federal Constitutional Court's ruling on the Lisbon Treaty.[119]

It is nonetheless interesting to reflect more generally on this jurisprudence. Sadurski notes that such countries joined the EU in order, *inter alia*, to provide a secure foundation for democracy and human rights, and points to the paradox that their constitutional courts have resisted the supremacy of EU law on the ground that it might endanger domestic constitutional protection of such rights.[120] In the following extract he seeks to explain the fact that such courts have engaged in reasoning analogous to that of the German courts in the *Solange* cases.

W Sadurski, 'Solange Chapter 3' : Constitutional Courts in Central Europe—Democracy—European Union[121]

The Solange story was well suited to be taken up in Central and Eastern Europe after accession, for two powerful reasons. First, in nearly all post-communist European States, constitutional courts established themselves as powerful, influential, activist players, dictating the rules of the political game for other political actors . . . While the powers of the constitutional courts in CEE largely resemble (and often exceed) those of their Western European counterparts, the other branches of CEE States are weaker, more chaotic, disorganized and inefficient compared to those in Western Europe. . . . Accession to the EU provided those courts with yet another opportunity to reinforce their own powers—an opportunity not to be missed: they could easily . . . assert a right to establish and enforce criteria of democracy, rule of law and human rights protection, which would inform the relationship between the European and national constitutional orders. Such a power would further increase their position vis-à-vis the political branches in their countries, by delineating those aspects of the supremacy of European law which they deemed unacceptable, or by dictating the need to carry out constitutional amendments if certain dimensions of supremacy were to be accepted.

The second reason why the Solange story almost begged for a recurrence in CEE stemmed from the strong sovereignty concerns which were felt and expressed in CEE states prior to accession, and persisted after joining the EU. Elsewhere I have described the situation surrounding this concern as a 'sovereignty conundrum': the often perceived irony that almost immediately after the shaking off of the brutal dominance by the Soviet Union (with its doctrine of 'limited sovereignty' of Warsaw Pact States) and the recovery of their long-missed independence, these countries should accede to a supranational Community in which traditional, strict sovereignty is found to be obsolete and in which they are asked to transfer much of their sovereignty to supranational institutions. . . . The constitutional courts thus found themselves in a situation in which the pull towards rephrasing sovereignty-based objections against the supremacy of EU law, in terms of their role as guardians of constitutional values, was irresistible . . . .

4 CONSTITUTIONAL PLURALISM

While the debate over whether there is or can be a final judicial arbiter in Europe remains a live one, different versions of constitutional pluralism are increasingly being proposed as a more attractive alternative to the stalemate of nation-state-centred versus EU-centred monism.[122] The following extracts are from the writings of two commentators whose approaches to the constitutional relationship between national law and European law have altered somewhat in recent years. Kirchhof, former judge of the Bundesverfassungsgericht and one of the main architects of the *Maastricht* judgment at the time, expresses a more cooperative and pluralist vision of this relationship than some of his earlier views suggested; while MacCormick's proposed analysis is one of 'legal pluralism under international law', in place of his earlier radically pluralist perspective which saw the answer to fundamental constitutional conflict lying in politics rather than in law.

N MacCormick, Questioning Sovereignty[123]

The doctrine of supremacy of Community law is not to be confused with any kind of all purpose subordination of Member State law to Community law. Rather, the case is that these are interacting systems, one of which constitutes in its own context and over the relevant range of topics a source of valid law superior to other sources recognized in each of the Member State systems. . . .

On the whole therefore, the most appropriate analysis of the relations of legal systems is pluralistic rather than monistic, and interactive rather than hierarchical. The legal systems of Member States and their common legal system of EC law are distinct but interacting systems of law, and hierarchical relationships of validity within criteria of validity proper to distinct systems do not add up to any sort of all-purpose superiority of one system over another. It follows also that the interpretative power of the highest decision-making authorities of the different systems must be, as to each system, ultimate. It is for the ECJ to interpret in the last resort and in a finally authoritative way the norms of Community law. But equally, it must be for the highest constitutional tribunal of each member State to interpret its constitutional and other norms, and hence to interpret the interaction of the validity of EC law with higher level norms of validity in the given state system. . . .

. . . The potential conflicts and collisions of systems that can in principle occur as between Community and member States do not occur in a legal vacuum, but in a space to which international law is also relevant. Indeed, it is decisively relevant, given the origin of the Community in Treaties and the continuing normative significance of *pacta sunt servanda*, to say nothing of the fact that in respect of their Community membership and otherwise the states owe each other obligations under international law. . . . What that signals is that state Courts have no right to assume an absolute superiority of state constitution over international good order, including the European dimension of that good order. This is not the same as saying that they must simply defer to whatever the ECJ considers to be mandated by the European constitution. . . . But in the event of an apparently irresoluble conflict arising between one or more national courts and the ECJ, there would always on this thesis be a possibility of recourse to international arbitration or adjudication to resolve the matter.

[122] See (n 36).
[123] (Oxford University Press, 1999) 117–121.

P Kirchhof, The Balance of Powers between National and European Institutions[124]

European law would lose its roots and its power to grow by being made autonomous and separate from the Member States, whereas in the close interweaving with Member States' constitutions it gains its identity in a unitary origin and a unitary future.. .[C]onflicts of norms that may arise are not to be avoided or resolved by a conflict of laws provision whereby one takes primacy over the other and norms are rendered non-legal, but through mutual respect and through 'cooperation'.... The ECJ and the constitutional courts each have adjudicatory responsibility of their own for the success of the European legal community.... Accordingly, it is not just 'open skies' that are above these courts of last instance; a system of balance of powers between the European and Member State courts is developing. Whoever seeks to interpret this system of balance and cooperation as a hierarchy is closing off the way laid down in European integration towards a balance of powers within the judicature.... Adjudicating means establishing the culture of measure, of balance, of co-operation, not dominance, subordination and rejection.

The literature on constitutional pluralism is rich and instructive. The more particular conclusions drawn from such pluralist precepts may nonetheless be contestable. Consider in this respect the following extract from Advocate General Maduro, who relied on such reasoning in defence of the ECJ's *Internationale Handelsgesellschaft* ruling. The case concerned a challenge to an EU directive for conformity with certain provisions in the French Constitution. The Conseil d'Etat sought a preliminary ruling from the ECJ on whether the Directive was compatible with principles of equality.

Case C-127/07 Société Arcelor Atlantique et Lorraine and Others v Premier ministre, Ministre de l'Écologie et du Développement durable and Ministre de l'Économie, des Finances et de l'Industrie
[2008] ECR I-9895

ADVOCATE GENERAL MADURO

15. It may appear that, in being asked to rule on the conformity of the Directive with the French Constitution, the Conseil d'État was faced with the impossible task of having to reconcile the irreconcilable: how to protect the Constitution within the domestic legal order without breaching the primordial requirement of the primacy of Community law? Those concurrent claims to legal sovereignty are the very manifestation of the legal pluralism that makes the European integration process unique... Far from resulting in a breach of the uniform application of Community law, those claims have prompted the Conseil d'État to seek, through the preliminary ruling procedure, the assistance of the Court of Justice in guaranteeing the observance by Community acts of the values and principles also recognised by its national constitution. There should be nothing surprising about that request, the Union itself being built on the constitutional principles common to the Member States, as reiterated in Article 6(1) TEU. In reality, what the Conseil d'État is asking the Court to do is not to verify the conformity of a Community act with certain national constitutional values—which it could not do anyway—but to review its lawfulness in the light of analogous European constitutional values. It is through this process that what at first sight appeared to be irreconcilable has in fact been reconciled. The European Union and the national legal orders are founded on the same fundamental legal values. While it is the duty of the national courts to guarantee the observance of those values within the scope of their constitutions, it is the responsibility of the Court to do likewise within the Community legal order.

[124] (1999) 5 ELJ 225, 227–228, 241. See also Voßkuhle (n 60).

16. Article 6 TEU expresses the respect due to national constitutional values. It also indicates how best to prevent any real conflict with them, in particular by anchoring the constitutional foundations of the European Union in the constitutional principles common to the Member States. Through this provision the Member States are reassured that the law of the European Union will not threaten the fundamental values of their constitutions. At the same time, however, they have transferred to the Court of Justice the task of protecting those values within the scope of Community law. In that connection, the Conseil d'État is correct in assuming that the fundamental values of its constitution and those of the Community legal order are identical. It must be pointed out, however, that that structural congruence can be guaranteed only organically and only at the Community level, through the mechanisms provided for by the Treaty. It is that organic identity which is referred to in Article 6 TEU and which ensures that national constitutions are not undermined, even though they can no longer be used as points of reference for the purpose of reviewing the lawfulness of Community acts. If they could, in so far as the content of the national constitutions and the instruments for protecting them vary considerably, the application of Community acts could be the subject of derogations in one Member State but not in another. Such an outcome would be contrary to the principles set out in Article 6 TEU and, in particular, to the understanding of the Community as a community based on the rule of law. In other words, the effect of being able to rely on national constitutions to require the selective and discriminatory application of Community provisions in the territory of the Union would, paradoxically, be to distort the conformity of the Community legal order with the constitutional traditions common to the Member States. That is why, in *Internationale Handelsgesellschaft,* the Court held that 'the validity of a Community measure or its effect within a Member State cannot be affected by allegations that it runs counter to either fundamental rights as formulated by the constitution of that State or the principles of a national constitutional structure'. (7) The primacy of Community law is therefore indeed a primordial requirement of the legal order of a community based on the rule of law.

17. Article 6 TEU merely makes explicit what was already inherent in that primordial requirement, namely that an examination of the compatibility of Community acts with the constitutional values and principles of the Member States may be carried out only by way of Community law itself and is confined, essentially, to the fundamental values which form part of their common constitutional traditions. Community law having thus incorporated the constitutional values of the Member States, national constitutions must adjust their claims to supremacy in order to comply with the primordial requirement of the primacy of Community law within its field of application. This does not mean that the national courts have no role to play in the interpretation to be given to the general principles and fundamental rights of the Community. On the contrary, it is inherent in the very nature of the constitutional values of the Union as constitutional values common to the Member States that they must be refined and developed by the Court in a process of ongoing dialogue with the national courts, in particular those responsible for determining the authentic interpretation of the national constitutions. The appropriate instrument of that dialogue is the reference for a preliminary ruling and it is in that context that the question raised here must be understood.

It is questionable whether national Constitutional Courts would accept all tenets of this reasoning. The EU has, to be sure, drawn on national constitutional values when framing its own. The ECJ will engage in a dialogue with national courts as to the more particular meaning to be ascribed to such values, although the extent thereof can be questioned.[125] Whether this 'squares the circle' and provides the requisite justification for the 'primordial requirement' of supremacy of EU law over all national law, including the national constitution, is more debatable.

There can be real differences in the interpretation of the general values that are common to the EU and the Member States. It is indeed differences about the particular conception of such values,

[125] There was, eg, little or no evidence of such dialogue as to the meaning of the particular constitutional value by the ECJ itself in the *Arcelor* case.

the way in which rights are balanced, and the weight accorded to them that divides legal systems, and differences of view within those systems. Given that this is so, the 'structural congruence' and 'organic identity' to which Maduro refers may be less readily attainable, or entail greater national constitutional sacrifice, than is evident in the extract. If the national court is content with the ECJ's interpretation of the relevant constitutional values, all well and good. If it is not and the difference of view is serious it may not be willing to sacrifice those values and the interpretation thereof embedded in its national constitution, as attested to by the fact that national constitutional courts continue to conceptualize EU law as lower in the normative hierarchy than the national constitution.

5 CONCLUSIONS

i. The supremacy of EU law still clearly retains its 'bi-dimensional' character, despite the monist view of supremacy asserted by the ECJ in *Simmenthal* and *Internationale Handelsgesellschaft*.

ii. While there are exceptions, most notably in the Netherlands,[126] most Member State courts continue to locate the authority of EU law in the national legal order within the national constitution, and not in the jurisprudence of the Court of Justice or in the sovereignty of the EU.

iii. Further, many higher national courts have asserted the ultimate, albeit residual, role of national courts in ensuring that the proper boundaries of EU competence are respected and in protecting rights which are fundamental within the national legal order.[127]

iv. Thus far, while the residual control of national courts has been firmly asserted as a matter of constitutional theory, it has rarely materialized in practice. Nonetheless, it remains as a clear counterpoint to the ECJ's assertion of the autonomy of EU law, and it may influence the ECJ in showing greater sensitivity to national constitutional concerns.[128]

EU INTERNATIONAL RELATIONS LAW

1 CENTRAL ISSUES

i. The EU for some years has been preoccupied with strengthening and highlighting its international role and identity. Until recently, the complex and fragmented three-pillar framework governing EU international relations significantly hindered this endeavour. One of the core objectives of the Lisbon Treaty, following the mandate of the Laeken Declaration, was to bring about greater consistency and coherence in EU external relations and to strengthen the EU as a global actor.

ii. The entry into force of the Lisbon Treaty brought several important changes in the field of EU international relations. *First*, Article 47 TEU declares that the EU has legal personality, giving formal status to the EU's practice over a number of years of entering into international agreements. *Secondly*, the three-pillar structure has been formally dissolved, although the Common Foreign and Security Policy (CFSP) remains separate and distinct from the rest of the EU's powers and competences, governed by the terms of the TEU rather than the TFEU. *Thirdly*, the former third pillar of police and judicial cooperation in criminal matters (PJCC), including its significant external dimension, is integrated into the same framework as all other EU policies, apart from the CFSP. *Fourthly*, the office of High Representative of the Union for Foreign Affairs and Security Policy was created. *Fifthly*, an EU external action service (an EU diplomatic corps) was created, integrating civil servants and diplomats from the Commission, Council, and Member States. *Sixthly*, the scope of the EU's exclusive common commercial (external trade) policy has been widened. *Seventhly*, EU international action is now based on a common set of values, principles, and objectives. *Finally*, the Treaty attempts to codify parts of the ECJ's complex case law on implied external powers.

iii. The law governing the EU's external competence originated in a complicated body of case law which was developed over many years by the ECJ. While the express Treaty-based external powers of the former Community were few, the Court early on gave a wide interpretation of the EC's implied powers, sowing the seeds for what became known as the principle of parallelism of internal and external powers.

iv. The two important questions dominating this legal doctrine are (a) whether a given external power exists and (b) whether it is exclusive to the EU (formerly the EC) or shared with the Member States. The ECJ consistently answered the first question in very broad terms, but it grew more cautious in relation to the second. Since *Opinion 1/94* on the WTO agreements, the ECJ has interpreted many of the EU's external powers as being shared with the Member States, and has given a less expansive reading to the scope of the EU's common commercial policy (CCP). It remains

to be seen whether the express widening of the CCP by the Lisbon Treaty will change the Court's approach in this respect or not.

v. The existence of so many shared competences has led to the phenomenon of 'mixed agreements', involving the participation of both sets of actors in the negotiation, conclusion, and implementation of agreements. While this has problematic consequences in terms of efficiency and visibility for international partners, it has been praised as a unique feature of the EU's federalism, and an important source of practical cooperation between the EU and the Member States.

vi. Unlike the rest of EU law and policy, the CFSP remains governed by a separate set of rules and principles, and is largely excluded from judicial review. However, given the overlaps in subject matter between the CFSP and other domains of EU external competence, as seen in cases concerning anti-terrorist sanctions or programmes to reduce the incidence of small weapons, some difficult legal issues arise. These include the appropriate legal basis for action, the proper delimitation of the scope of each field of action, and the organization of cooperation across these fields.

vii. The ECJ has played an active role in EU international relations, especially in determining the existence, scope, and nature of the EU's competences over the years. It has treated international agreements (including mixed agreements) as acts of the EU which are subject to its jurisdiction. It has ruled that international agreements are a binding and integral part of the EU legal order, and that they may, in principle, have direct effect. However, it has consistently ruled that provisions of the WTO Agreements may not be invoked before EU Courts, and recent rulings suggest it may extend this reasoning to other categories of international agreement.

2 INTRODUCTION: THE EU AS AN INTERNATIONAL ACTOR AND THE GENERAL PRINCIPLES OF EU EXTERNAL ACTION

(A) THE EU AS AN INTERNATIONAL ACTOR

The European Union is seeking to develop a role for itself as a significant actor on the global stage. While it enjoys substantially more influence in some fields (such as trade) than others, in general the EU has developed a substantial network of relations through which it acts to influence international affairs. The EU is the world's largest trading power and a major donor of development aid and humanitarian assistance. It has been described variously as a civilian,[1] normative,[2] or structural power.[3] These terms reflect the fact that the means the EU deploys are—of necessity, given its lack of significant military capacity—economic, diplomatic, structural, and political rather than strongly coercive in nature. The EU relies primarily on its 'soft power' on the global stage.[4] The Lisbon Treaty did not alter the character of the EU in this respect, although it strengthened the institutional basis for the development of a Common Security and Defence Policy.[5]

The EU plays many different roles at the same time. In positive terms it can be described as flexible and multifaceted; in negative terms as fractured and confused. Cremona has identified at least five different roles played by the EU as a global actor: (i) a laboratory and model for other regions,

[1] F Duchêne, 'Europe's Role in a World Peace' in R Mayne (ed), *Europe Tomorrow: Sixteen Europeans Look Ahead* (Fontana, 1972).

[4] J Nye, *Soft Power, The Means to Success in World Politics* (Public Affairs, 2004).

[5] Art 42 TEU.

(ii) a market player defending and promoting its own economic interests, (iii) a rule-generator and exporter of norms, operating through a network of agreements with other states and regions, (iv) a force for stabilization, within the EU and beyond, and (v) a magnet and neighbour using the incentive of membership.[6]

(B) THE CONSTITUTIONAL FRAMEWORK AND GENERAL PRINCIPLES OF EU EXTERNAL ACTION

The constitutional structure of EU international relations law prior to the Lisbon Treaty was complex, fragmented, and dominated by ECJ case law. While it remains complex and to some extent still fragmented, the Lisbon Treaty introduced a range of provisions designed to underscore the role of the EU as a global actor[7] and to strengthen the coherence of its international relations system.[8] Article 3(5) TEU highlights the role of values in EU international relations by declaring that:

> In its relations with the wider world, the Union shall uphold and promote its values and interests and contribute to the protection of its citizens. It shall contribute to peace, security, the sustainable development of the Earth, solidarity and mutual respect among peoples, free and fair trade, eradication of poverty and the protection of human rights, in particular the rights of the child, as well as to the strict observance and the development of international law, including respect for the principles of the United Nations Charter.

Article 205 TFEU, which forms a kind of 'chapeau' to the part of the Treaty (Part V of the TFEU) dealing with EU external relations other than CFSP, declares that:

> The Union's action on the international scene, pursuant to this Part, shall be guided by the principles, pursue the objectives and be conducted in accordance with the general provisions laid down in Chapter 1 of Title V of the Treaty on European Union.

Chapter 1 of Title V TEU begins with Article 21, which for the first time gathers together, summarizes, and articulates the core objectives of all EU external policies, including the CFSP. As can be seen below, these provisions are intended to contribute to the establishment of an integrated framework and to articulate—alongside the values set out in Article 3(5) TEU—a common, overarching set of principles and objectives for EU international relations:

Article 21 TEU

> 1. The Union's action on the international scene shall be guided by the principles which have inspired its own creation, development and enlargement, and which it seeks to advance in the wider world: democracy, the rule of law, the universality and indivisibility of human rights and fundamental freedoms,

[6] M Cremona, 'The Union as a Global Actor: Roles, Models and Identity' (2004) 41 CMLRev 553.

[7] Whether or not the Lisbon Treaty innovations will in fact strengthen the EU as a global actor remains to be seen, as much will depend—as always—on the political will of the Member States: B Donnelly, 'Europe in the World: All Change or No Change in EU Foreign Policy After Lisbon?' (2010) 45 International Spectator 17; F Bindi (ed), *The Foreign Policy of the EU: Assessing Europe's Role in the World* (Brookings Institute Press, 2010).

[8] M Cremona, 'Coherence through Law: What Difference Will the Treaty of Lisbon Make?' (2008) 3 Hamburg Review of Social Sciences 11; P Van Elsuwege, 'EU External Action after the Collapse of the Pillar Structure: In Search of a New Balance Between Delimitation and Consistency' (2010) 47 CMLRev 987.

respect for human dignity, the principles of equality and solidarity, and respect for the principles of the United Nations Charter and international law.

The Union shall seek to develop relations and build partnerships with third countries, and international, regional or global organisations which share the principles referred to in the first subparagraph. It shall promote multilateral solutions to common problems, in particular in the framework of the United Nations.

2. The Union shall define and pursue common policies and actions, and shall work for a high degree of cooperation in all fields of international relations, in order to:

(a) safeguard its values, fundamental interests, security, independence and integrity;
(b) consolidate and support democracy, the rule of law, human rights and the principles of international law;
(c) preserve peace, prevent conflicts and strengthen international security, in accordance with the purposes and principles of the United Nations Charter, with the principles of the Helsinki Final Act and with the aims of the Charter of Paris, including those relating to external borders;
(d) foster the sustainable economic, social and environmental development of developing countries, with the primary aim of eradicating poverty;
(e) encourage the integration of all countries into the world economy, including through the progressive abolition of restrictions on international trade;
(f) help develop international measures to preserve and improve the quality of the environment and the sustainable management of global natural resources, in order to ensure sustainable development;
(g) assist populations, countries and regions confronting natural or man-made disasters; and
(h) promote an international system based on stronger multilateral cooperation and good global governance.

3. The Union shall respect the principles and pursue the objectives set out in paragraphs 1 and 2 in the development and implementation of the different areas of the Union's external action covered by this Title and by Part Five of the Treaty on the Functioning of the European Union, and of the external aspects of its other policies.

The Union shall ensure consistency between the different areas of its external action and between these and its other policies. The Council and the Commission, assisted by the High Representative of the Union for Foreign Affairs and Security Policy, shall ensure that consistency and shall cooperate to that effect.

(c) THE NEW INSTITUTIONS OF EU INTERNATIONAL ACTION

Following the statement of the principles and goals of EU foreign policy in Article 21 TEU, Article 22 describes the role of some of the key institutional actors in the shaping of EU external action, in particular the European Council and the newly established High Representative for Foreign Affairs and Security Policy:

1. On the basis of the principles and objectives set out in Article 21, the European Council shall identify the strategic interests and objectives of the Union.

Decisions of the European Council on the strategic interests and objectives of the Union shall relate to the common foreign and security policy and to other areas of the external action of the Union. Such decisions may concern the relations of the Union with a specific country or region or may be thematic in approach. They shall define their duration, and the means to be made available by the Union and the Member States.

> The European Council shall act unanimously on a recommendation from the Council, adopted by the latter under the arrangements laid down for each area. Decisions of the European Council shall be implemented in accordance with the procedures provided for in the Treaties.
>
> 2. The High Representative of the Union for Foreign Affairs and Security Policy for the area of common foreign and security policy, and the Commission for other areas of external action, may submit joint proposals to the Council.

While the European Council is far from being a new actor in EU international relations, the Lisbon Treaty amendments have strengthened and highlighted its role in this respect, giving it an express mandate to develop the EU's overall foreign policy strategy and the power to adopt binding decisions as well as non-binding frameworks and strategies across the whole field of external relations. The role of the 'semi-permanent' President of the European Council is described in Chapter 2, Section 4(B).

The two important new institutional players introduced by the Lisbon Treaty in the field of external relations are the High Representative for Foreign Affairs and Security Policy ('Foreign Minister' under the abandoned Constitutional Treaty), and the European External Action Service. The office and role of the High Representative are set out and described in Chapter 2, Section 5. As we have seen, the role is complicated by the fact that the holder is simultaneously a member (Vice-President) of the European Commission and Chair of the Foreign Affairs Council, thus serving two rather different masters. The first High Representative, appointed in 2010, was Baroness Catherine Ashton. Reviews of the role and performance of the High Representative have so far been mixed, with media reaction being particularly critical,[9] although it remains to be seen to what extent this is a reflection on the performance of the post-holder or on the multiple constraints and responsibilities of the new position. The institutional potential of the position of High Representative has however been favourably compared with that of the President of the European Council, given that (i) the High Representative's position is not limited in time, (ii) the High Representative is given a more independent field of activity in conducting the CFSP and CSDP under Article 18(2) TEU, and explicit powers of initiative such as those in Article 22(2) TEU above, and (iii) the High Representative has the new European External Action Service (EEAS) at her disposal.[10]

The EEAS was formally established in 2010.[11] The description of its function in Article 27(3) TEU is minimal, specifying only that it is to assist the High Representative in fulfilling his or her mandate, and that it shall work 'in cooperation with' the diplomatic services of Member States.[12] However, the new EU diplomatic service is likely to become an important component of EU foreign policy over time, even if its establishment has been accompanied by institutional wrangling over its composition, and in particular over the balance between national diplomats and EU civil servants, and by the traditional debates over supranational versus intergovernmental influences on the trajectory of the EU. In the words of one MEP, 'It is not yet certain whether, in practice, the European External Action Service will actually develop its full potential and deliver real added value, or whether it will simply become Europe's twenty-eighth foreign ministry'.[13]

3 EXTERNAL CAPACITY AND EU COMPETENCE

(A) INTERNATIONAL LEGAL PERSONALITY

According to Article 47 TEU, the Union 'shall have legal personality'.[14] We saw in Chapter 9 that the counterpart of this provision in the former EC Treaty (Article 181 EC) was central to the ECJ's argument for the autonomy and supremacy of the Community legal system in the 1960s.[15] Article 47 TEU is extremely brief, but Article 335 TFEU elaborates somewhat:

> In each of the Member States, the Union shall enjoy the most extensive legal capacity accorded to legal persons under their laws; it may, in particular, acquire or dispose of movable and immovable property and may be a party to legal proceedings. To this end, the Union shall be represented by the Commission. However, the Union shall be represented by each of the institutions, by virtue of their administrative autonomy, in matters relating to their respective operation.

Notably there is no mention of *international* personality in either provision. In this sense the TEU and TFEU differ from both the former Coal and Steel Treaty and the Euratom Treaty, each of which made express reference to international legal capacity.[16] This makes it all the more striking that the ECJ in the early *ERTA* case (or *AETR*, to use the French acronym) nonetheless interpreted what was then Article 281 EC as granting the Community international legal personality.[17] The ECJ in *ERTA* extrapolated from the statement of legal personality to conclude that the Community's, now the Union's, external capacity covers the 'whole extent of the field of the objectives' defined in the first part of the Treaty. However, it distinguished the broad notion of capacity from actual legal authority or competence to enter into an international agreement in a given circumstance. Capacity means that there is the potential for the EU to act, whereas legal authority must be found in the specific conferral of power in another provision of the Treaty. [18]

Under international law, as an organization the international legal personality of which is recognized, the EU enjoys the right to be represented and to receive the representatives of third states and organizations, the right to conclude treaties, the right to submit claims or to act before an international court or judge, the right to become party to international conventions, and the right to enjoy immunities. It is also subject to legal obligations and responsibility under international law.

(B) THE NEED FOR A LEGAL BASIS AND THE LIMITS OF EXTERNAL EU COMPETENCE

Being founded on the principle of conferred powers, the EU may act only when there is a legal basis for action provided in the Treaties.[19] The choice of legal basis determines the procedures by which

[14] This provision ended the debate, which had taken place since the adoption of the Maastricht Treaty, over whether the European Union, as opposed to the European Community, enjoyed international legal personality.

[15] Case 6/64 *Costa v ENEL* [1964] ECR 585.

[16] Art 6(2) ECSC Treaty had provided 'In international relations, the Community shall enjoy the legal capacity it requires to perform its functions and attain its objectives'. The Euratom Treaty provides in Art 101(1) that 'The Community may, within the limits of its powers and jurisdiction, enter into obligations by concluding agreements or contracts with a third State, an international organization or a national of a third State'.

[17] Case 22/70 *Commission v Council* (*AETR/ERTA*) [1971] ECR 263.

[18] The relevance of this distinction can be seen recently in Declaration No 24 which was annexed to the EU Treaties by the Lisbon Treaty and which states that 'the fact that the European Union has a legal personality will not in any way authorise the Union to legislate or to act beyond the competences conferred upon it by the Member States in the Treaties'.

[19] Ch 3.

secondary measures are adopted and the participation of the EU institutions in decision-making.[20] The importance of choosing the correct legal base and the consequences of not doing so were highlighted in *Opinion 2/00*, which concerned the then Community's signature of the Cartagena Protocol to the Convention on Biological Diversity. The ECJ declared that the use of an incorrect legal basis was liable to invalidate the EU act concluding the agreement, thereby vitiating the EU's consent to be bound and creating complications both for the EU and at international level.[21] Referring to its case law on the 'objective' choice of legal basis, which specifies that where a measure has more than one purpose and where one purpose is incidental and the other predominant, it should be based on a single legal basis rather than two, the ECJ added here that where the objectives were inseparably linked, more than one legal basis could be used.[22]

The ECJ has even declared invalid an EU legislative act which established a position to be taken on an international agreement, on the ground that it did not clearly refer, either explicitly or implicitly, to the specific legal basis for the measure.[23] However, in order to protect third parties and to comply with the Vienna Convention on the Law of Treaties, the ECJ ruled in *France v Commission* that such agreements are nonetheless to be binding on the EU.[24] Assuming that it does indeed have competence under another provision of the Treaty to conclude the agreement, the EU is required to act again, using the correct legal basis this time.[25]

The issue arose in the *Passenger Name Records* (PNR) case in which the Parliament challenged the Council's conclusion of an agreement with the US on the processing and transfer of PNR data, and a Decision of the Commission determining that the US Bureau of Customs and Border Protection provided an adequate level of protection of PNR data under the Data Protection Directive.[26] The PNR Agreement was concluded on the basis of an internal market provision, Article 95 EC (now Article 114 TFEU), which was also the legal basis for the Data Protection Directive. The Court ruled that although the data would be initially collected by airlines in the course of a normal commercial activity the further use of the data would be for the purpose of safeguarding public security in combating terrorism, and since this use was expressly excluded from the scope of the Directive, the two acts fell outside the scope of EC competence at the time.[27] As a result, the EU was required to denounce the agreement within a specific period of time, and in accordance with the relevant rules of international law.[28]

(c) EXPRESS AND IMPLIED COMPETENCE

The two original Treaty provisions which, since 1957, have expressly provided for the conduct of EU international relations are Article 207 TFEU (ex Article 133 EC) on the common commercial policy (CCP) and Article 217 TFEU (ex Article 310 EC) on the conclusion of agreements 'establishing an association' with the EU. The original Communities were also empowered to maintain relations with other international organizations, in particular the Council of Europe, the OECD, and the organs and specialized agencies of the UN. Further express treaty-making powers were added in 1987 by the

Single European Act in the fields of research, technological development, and the environment, and subsequently by the Maastricht Treaty in 1993 in the fields of development cooperation and economic and monetary policy.

However, from the early 1960s on, the ECJ apparently took the view that the Community would not be able to develop a sufficiently strong international presence on the basis of its express powers alone. This seems to be the logic underpinning its ruling in *ERTA*, where the Court sought to avoid the prospect of uncoordinated external representation of the EC by its Member States in fields in which they had adopted common internal policies. As we will see below, the Lisbon Treaty attempts to codify the long-standing case law of the ECJ on implied powers. Finally, while the discussion below refers to the competence of the EC, this case law is applicable to the EU now that the EC no longer exists as a separate entity but has been absorbed into the EU.

Case 22/70 **Commission v Council (AETR/ERTA)**
[1971] ECR 263

[Note Lisbon Treaty renumbering: Art 113 EC is now 207 TFEU, Art 114 EC has been repealed, Art 238 EC is now Art 217 TFEU, and Arts 74 and 75 EC are now Arts 90 and 91 TFEU]

Five out of six Member States of the then EEC and a number of other European states which were not EEC members signed a 1962 European Agreement concerning the work of crews of vehicles engaged in international road transport (AETR), but it did not enter into force and negotiations were resumed in 1967. Similar work undertaken at EC level had resulted in the adoption of Council Regulation 543/69 standardizing driving and rest periods of drivers. A year after the adoption of this Regulation, the Member States together concluded the negotiations on a new European Agreement (AETR) with other states. The Commission brought an action for the annulment before the ECJ of all legal consequences of the Council proceedings which had led to the Member States adopting the AETR. The ECJ considered whether the Community had competence to sign the AETR Agreement.

THE ECJ

16. Such authority arises not only from an express conferment by the Treaty—as is the case with Articles 113 and 114 for tariff and trade agreements and with Article 238 for association agreements—but may equally flow from other provisions of the Treaty and from measures adopted, within the framework of those provisions, by the Community institutions.

...

23. According to Article 74, the objectives of the Treaty in matters of transport are to be pursued within the framework of a common policy.

24. With this in view, Article 75 (1) directs the Council to lay down common rules and, in addition, 'any other appropriate provisions'.

25. By the terms of subparagraph (a) of the same provision, those common rules are applicable 'to international transport to or from the territory of a Member State or passing across the territory of one or more Member States'.

26. This provision is equally concerned with transport from or to third countries, as regards that part of the journey which takes place on Community territory.

27. It thus assumes that the powers of the Community extend to relationships arising from international law, and hence involve the need in the sphere in question for agreements with the third countries concerned.

28. Although it is true that Articles 74 and 75 do not expressly confer on the Community authority to enter into international agreements, nevertheless the bringing into force, on 25 March 1969, of Regulation No 543/69 of the Council on the harmonization of certain social legislation relating to road transport (OJ L 77, p. 49) necessarily vested in the Community power to enter into any agreements with third countries relating to the subject-matter governed by that regulation.

29. This grant of power is moreover expressly recognized by Article 3 of the said regulation which prescribes that: 'The Community shall enter into any negotiations with third countries which may prove necessary for the purpose of implementing this regulation'.

30. Since the subject-mater of the AETR falls within the scope of Regulation No 543/69, the Community has been empowered to negotiate and conclude the agreement in question since the entry into force of the said regulation.

According to the Court, the fact that by the time the contested decision was taken by the Council on the international road transport agreement a common policy on social aspects of road transport had already been adopted by the EC made it possible to imply external powers on the part of the Community. Conversely, the Court ruled that until the internal rules had been adopted those powers remained vested in the Member States.[29]

In the subsequent *Kramer* case concerning fisheries conservation, the ECJ reiterated this dimension of the *ERTA* judgment. It ruled that external legal authority 'arises not only from an express conferment by the Treaty, but may equally flow *implicitly* from other provisions of the Treaty, from the Act of Accession and from measures adopted, within the framework of those provisions, by the Community institutions'.[30] In the context of *Kramer*, the ECJ ruled that given the EC's internal power to take any measure for the conservation of the biological resources of the sea, the only way to ensure an effective and equitable conservation was by a system including also non-member countries. Thus, 'it follows from the very duties and powers which Community law has established and assigned to the institutions of the Community on the internal level that the Community has authority to enter into international commitments for the conservation of the resources of the sea'.[31]

The subtle difference between the *Kramer* and the *ERTA* rulings is that the *ERTA* principle is based on the actual *adoption* of internal rules. In *Kramer*, however, the Court ruled that the Treaty provisions which explicitly conferred competence on the internal level in this field must, on the grounds of equity and effectiveness, be read as implicitly conferring treaty-making power. This has been described as a 'principle of complementarity' since the external competence of the Community is viewed as necessary to complement its internal competence.[32]

Even after *Kramer*, however, doubts persisted whether international competence existed in the absence of *either* express conferral of external powers *or* the actual adoption of common internal rules. *Opinion 1/76* was the final ambitious step in this expansive articulation of the implied powers doctrine.

Opinion 1/76 (European Laying-up Fund for Inland Waterway Vessels)
[1977] ECR 741

The subject of this Opinion was the legal competence of the EC to sign an international Agreement establishing a European laying-up fund for inland waterway vessels. The aim of the proposed scheme was to eliminate disturbances arising from surplus carrying capacity for goods by inland waterway in

[29] Case 22/70 *ERTA* [1971] ECR 263, [82].
[30] Cases 3, 4 & 6/76 *Kramer* [1976] ECR 1279, [19]–[20].
[31] Ibid [30].
[32] A Dashwood, 'The Classic Authorities Revisited' in A Dashwood and C Hillion (eds), *The General Law of EC External Relations* (Sweet & Maxwell, 2000).

the Rhine and Moselle basins. This objective could not have been fully achieved by the establishment of common EC transport rules under Article 71 EC, because of the traditional participation of Swiss vessels; therefore Switzerland was brought into the scheme by means of the international agreement. The Court elaborated further on the scope of the implied treaty-making powers of the Community.

THE ECJ

3. [A]uthority to enter into international commitments may not only arise from an express attribution by the Treaty, but equally may flow implicitly from its provisions. The Court has concluded *inter alia* that whenever Community law has created for the institutions of the Community powers within its internal system for the purpose of attaining a specific objective, the Community has authority to enter into the international commitments necessary for the attainment of that objective even in the absence of an express provision in that connection.

4. This is particularly so in all cases in which internal power has already been used in order to adopt measures which come within the attainment of common policies, it is, however, not limited to that eventuality. Although the internal Community measures are only adopted when the international agreement is concluded and made enforceable, as is envisaged in the present case by the proposal for a regulation to be submitted to the Council by the Commission, the power to bind the Community vis-à-vis third countries nevertheless flows by implication from the provisions of the Treaty creating the internal power and in so far as the participation of the Community in the international agreement is, as here, necessary for the attainment of one of the objectives of the Community.

This case has been described as endorsing the principle of parallelism, according to which EU external competence mirrors its internal competence.[33] The upshot is that the EU has competence to enter into an international agreement in a given domain, provided that (i) the Treaty confers *internal* competence on the EU in that domain for the purpose of attaining a specific objective, and (ii) participation of the EU in the agreement in question is *necessary* for the attainment of that objective. In other words, for the EU to have external competence in a certain field it is not necessary for it to have *exercised* its internal competence in that field. The very existence of such internal competence is sufficient.

Finally, we shall also see in Chapter 11 how the Court in *Opinion 2/94* on accession of the EC to the ECHR indicated that there are other limits to the implied external competence of the EU.[34] The Court in that case ruled, in relation to the subject of human rights protection, that where entry into an international agreement would have fundamental institutional implications for the EU and would modify its own system of protection, it would fall outside EU external competence and would require a Treaty amendment.

(D) EXCLUSIVE EU COMPETENCE

Once the existence of EU competence is established, the next important question is whether it is exclusive competence, or whether it is shared with the Member States. Exclusivity means that the competence has been completely transferred by Member States to the EU and that there is no concurrent Member State competence.[35]

The ECJ established the exclusive nature of EU competence as regards the common commercial policy in *Opinion 1/75* as far as the conclusion of international agreements is concerned,[36] and

[33] T Tridimas and P Eeckhout, 'The External Competence of the Community and the Case-Law of the Court of Justice: Principle versus Pragmatism' (1994) 14 YBEL 143.

[34] *Opinion 2/94 on Accession by the Community to the ECHR* [1996] ECR I–1759; see Ch 11, section 7(c).

[36] *Opinion 1/75 (Understanding on a Local Cost Standard)* [1975] ECR 1355.

similarly in *Donckerwolcke* as far as the adoption of autonomous or unilateral legislative acts is concerned.[37]

The Court based its assertion of exclusivity on two main factors. The first was the threat which concurrent powers would pose to mutual trust within the EU and thus to the coherence and effectiveness of the defence of EU commercial interests vis-à-vis non-member countries. The second was the risk of distortion of competition within a single market brought about by different commercial and trading policies, given the varying degrees of economic strength of the different Member States. Its reasoning here has been described as 'a characteristic mixture of pragmatism and (again) the link between external and internal trade policy'.[38] The same reasoning was echoed in the Court's judgment on the establishment of the common fisheries policy.[39] It follows from this case law that if a particular issue is deemed to fall within the scope of these policies, CCP or fisheries, the EU's competence will be exclusive.

We see that in the early case law the claim of exclusivity of external competence was linked by the ECJ to the autonomy of the EU legal order *vis-à-vis* the Member State. The very existence of implied powers in these cases is closely tied by the Court to their exclusive nature.[40] At the same time, the doctrine of pre-emption was developed, according to which once the EU had exercised its powers either internally or externally, and the field was thus 'occupied', the Member States were precluded from acting. The rationale was that unilateral action by individual Member States would be incompatible with the unity of the market and the uniform application of EU law. Although the ECJ has since moved away from the strength of its early position on exclusivity, the Lisbon Treaty recently expanded the scope of external exclusive EU competence, even while also adding new non-exclusive and non-pre-emptive external competences.

It is necessary, in order to understand this complicated area of EU law, to trace the journey taken by the Court over time.

Case 22/70 **Commission v Council (AETR/ERTA)** [1971] ECR 263

[Note Lisbon Treaty renumbering: Art 5 EC is now Art 4(3) TEU]

THE ECJ

17. In particular, each time the Community, with a view to implementing a common policy envisaged by the Treaty, adopts provisions laying down common rules, whatever form these may take, the Member States no longer have the right, acting individually or even collectively, to undertake obligations with third countries which affect those rules.

18. As and when such common rules come into being, the Community alone is in a position to assume and carry out contractual obligations towards third countries affecting the whole sphere of application of the Community legal system.

[37] Case 41/76 *Donckerwolcke* [1976] ECR 1921.

[38] M Cremona, 'External Relations and External Competence of the European Union. The Emergence of an Integrated Policy' in P Craig and G de Búrca (eds), *The Evolution of EU Law* (Oxford University Press, 2nd edn, 2011) ch 9.

[39] Case 804/79 *Commission v UK (sea fisheries conservation)* [1981] ECR 1045, [17]–[18]. This case in fact established exclusivity with regard to Art 102 of the Act of Accession.

[40] Cremona (n 38), who argues that this is a stage during which the 'classic' form of pre-emption theory was developed by the Court. External competence was seen as *either* exclusive or concurrent. Concurrent competence at that stage meant 'distinct, discrete compartments for the EC and the Member States' and did not include the concept of complementary action by both in the same field, unless the Member States were acting under a form of authorization from the EU.

19. With regard to the implementation of the provisions of the Treaty the system of internal Community measures may not therefore be separated from that of external relations.

20. Under Article 3(e), the adoption of a common policy in the sphere of transport is specially mentioned amongst the objectives of the Community.

21. Under Article 5, the Member States are required on the one hand to take all appropriate measures to ensure fulfilment of the obligations arising out of the Treaty or resulting from action taken by the institutions and, on the other hand, to abstain from any measure which might jeopardize the attainment of the objectives of the Treaty.

22. If these two provisions are read in conjunction, it follows that to the extent to which Community rules are promulgated for the attainment of the objectives of the Treaty, the Member States cannot, outside the framework of the Community institutions, assume obligations which might affect those rules or alter their scope. . . .

. . .

31 These Community powers exclude the possibility of concurrent powers on the part of Member States, since any steps taken outside the framework of the Community institutions would be incompatible with the unity of the Common Market and the uniform application of Community law.

Following *ERTA*, the ECJ indicated that there were a number of other contexts in which Community competence would be exclusive.

The *first*, a now very limited example, was where internal powers could only be effectively exercised *at the same time* as external powers. The Court ruled in *Opinion 1/76* that exclusive external powers could arise at the moment of being exercised, even without there having been any prior exercise of internal powers, so long as internal competence could be effectively exercised only at the same time as external competence,[41] and so long as the conclusion of the international agreement was necessary in order to attain objectives of the Treaty that could not be attained by unilateral rules.[42] This rather convoluted instance has effectively been restricted to the facts of *Opinion 1/76*.[43] In later cases, the ECJ has reverted to the stance that the adoption of internal legislation is generally a prerequisite for the exclusivity of implied powers.[44]

The *second* context articulated by the ECJ was where the agreement falls into an area which is already largely covered by EU rules. The Court ruled that external EU competence will be exclusive where rules have been adopted in other areas of EU law (apart from common policies such as transport policy in *ERTA*), and particularly in areas where harmonizing legislation has been adopted.[45] The Court relied in making this argument on the ubiquitous principle of loyal cooperation in Article 4(3) TEU (ex Article 10 EC) which it has used extensively in other fields to promote the effectiveness of EU law.[46] Thus in *Opinion 2/91* on ILO Convention No 170, which *inter alia* regulated safety in the use of chemicals at work, the Court ruled that even though there was no actual contradiction between the rules of the ILO Convention and the provisions of EU directives in the same field, the general area covered by the Convention was one which to a large extent had been covered by progressive EU rules, such that Member States could not undertake commitments in this field outside the EU context. The

[43] The case—on the laying-up fund for inland waterway vessels—allegedly involved a situation in which the achievement of the Treaty objective required the prior conclusion of an international agreement and could not be attained by adopting internal rules: *Opinion 1/94 (WTO)* (n 41) [85]. See also *Opinion 1/03 on the Lugano Convention* [2006] ECR I–1145, [115].

[44] *Opinion 1/94 (WTO)* (n 41) [88]–[89].

[46] *Opinion 2/91* (n 45) [10]; *Opinion 1/03 on the Lugano Convention* (n 43) [119].

mere existence of EU rules on broadly the same subject matter was sufficient without the need for any conflict. The Court however drew back in part from this extensive holding on the facts of the case, by ruling that competence was not actually exclusive in the given context, since both the EU rules and the ILO Convention laid down *minimum standards* only, so that there was nothing to prevent Member States from fully complying with EU law.[47]

The ECJ has continued to expand the arena in which Member States are prevented from acting even in the absence of an actual conflict. In the *Greek Maritime Monitoring* case, the Commission brought infringement proceedings against Greece before the ECJ for submitting a proposal on monitoring compliance with the SOLAS Convention to the International Maritime Organization (IMO), within a field of exclusive EU competence.[48] The ECJ ruled that although the proposal submitted by Greece was not itself a binding measure, it could have led to the adoption of new rules by the IMO which in turn could have affected the existing EU regulation implementing the SOLAS Convention. While the Court accepted that the EU's exclusive competence need not preclude the Member States from actively participating in the IMO, it held that the positions adopted by states within the IMO would first have to be coordinated at EU level, and no state could individually assume obligations likely to affect existing EU rules.[49]

The *third* and *fourth* possible examples of exclusive competence respectively were referred to in the ECJ's *Opinion 1/94* on the competence of the EU to conclude the General Agreement on Trade in Services (GATS) and the Agreement on Trade-related Intellectual Property Rights (TRIPs).[50] These were, in the context of services, the treatment of nationals of non-EU countries, and issue areas which have been completely internally harmonized. Yet despite articulating these two additional grounds for exclusive competence,[51] the Court in *Opinion 1/94* also ruled that the risk that bilateral agreements would lead to distortions in the flow of services in the internal market would not provide grounds for exclusive EU competence.[52] The Court ultimately ruled that competence to conclude the GATS was shared between the EU and the Member States.[53]

Opinion 1/94 represented the first high-profile shift by the Court away from its expansive case law on the exclusive nature of the EC's implied external competence. The line of case law from *ERTA*, including *Kramer* and *Opinions 1/75, 1/76,* and *2/91,* had been in the direction of widening the sphere of external EU competence and extending its exclusive nature. *Opinion 2/92*, which followed shortly after *Opinion 1/94*, also adopted a more measured tone in relation to exclusivity.

Opinion 2/92 (OECD Decision on National Treatment)
[1995] ECR I–521

31. In that regard, the Court has consistently held, most recently in Opinion 1/94..., that the Community's exclusive external competence does not automatically flow from its power to lay down rules at internal level. As the Court pointed out in the AETR judgment..., the Member States whether acting individually or collectively, only lose their right to enter into obligations with non-member countries as and when there are common rules which could be affected by such obligations.

[47] *Opinion 2/91* (n 45) [18].

[51] Case C–467/98 *Commission v Denmark* (n 42) [83]–[84]; *Opinion 1/03* (n 43) [122].
[52] *Opinion 1/94* (n 41) [78]–[79]; Case C–467/98 *Commission v Denmark* (n 42) [85]–[86]; *Opinion 1/03* (n 43) [123].
[53] *Opinion 1/94* (n 41) [95]–[96].

In keeping with the highly complex and technical tone of the case law, it is evident that the determination of whether a given field has been completely or exhaustively occupied is far from clear, and requires a definition of the relevant 'field'. In *Opinion 2/92 (OECD)* itself, for example, the Court ruled that the internal measures adopted by the EU had not covered all the fields of activity to which the OECD decision was related, and that the EU enjoyed exclusive competence only in areas where internal common rules had been adopted.

In *Opinion 1/94* and, more recently in its *Open Skies* rulings,[54] the ECJ purported to summarize the various situations set out above in which the EU has so far been held to have exclusive competence. Apart from the lack of clarity in their scope and the debate they have generated, these situations are, according to the Court in *Opinion 1/03* on the Lugano Convention, 'only examples, formulated in the light of the particular contexts with which the Court was concerned'.[55] Having restated its previous case law, however, the ECJ went on to set out more general guidelines on how to determine whether EU competence in a given instance is exclusive.

Opinion 1/03 (Lugano Convention)
[2006] ECR I–1145

THE ECJ

124. It should be noted in that context that the Community enjoys only conferred powers and that, accordingly, any competence, especially where it is exclusive and not expressly conferred by the Treaty, must have its basis in conclusions drawn from a specific analysis of the relationship between the agreement envisaged and the Community law in force and from which it is clear that the conclusion of such an agreement is capable of affecting the Community rules.

125. In certain cases, analysis and comparison of the areas covered both by the Community rules and by the agreement envisaged suffice to rule out any effect on the former (see Opinion 1/94 . . . ; Opinion 2/92 . . . , and Opinion 2/00 . . .).

126. However, it is not necessary for the areas covered by the international agreement and the Community legislation to coincide fully. Where the test of 'an area which is already covered to a large extent by Community rules' (Opinion 2/91 . . .) is to be applied, the assessment must be based not only on the scope of the rules in question but also on their nature and content. It is also necessary to take into account not only the current state of Community law in the area in question but also its future development, insofar as that is foreseeable at the time of that analysis (see, to that effect, Opinion 2/91 . . .).

127. That that assessment must include not only the extent of the area covered but also the nature and content of the Community rules is also clear from the Court's case-law referred to in paragraph 123 of the present opinion, stating that the fact that both the Community rules and the international agreement lay down minimum standards may justify the conclusion that the Community rules are not affected, even if the Community rules and the provisions of the agreement cover the same area.

. . .

133. It follows from all the foregoing that a comprehensive and detailed analysis must be carried out to determine whether the Community has the competence to conclude an international agreement and whether that competence is exclusive. In doing so, account must be taken not only of the area covered

[54] Case C–466/98 *Commission v United Kingdom* [2002] ECR I–9427; Case C–467/98 (n 42); Case C–468/98 *Commission v Sweden* [2002] ECR I–9575; Case C–469/98 *Commission v Finland* [2002] ECR I–9627; Case C–471/98 *Commission v Belgium* [2002] ECR I–9681; Case C–472/98 *Commission v Luxembourg* [2002] ECR I–9741; Case C–475/98 *Commission v Austria* [2002] ECR I–9797.

[55] *Opinion 1/03* (n 43) [121].

> by the Community rules and by the provisions of the agreement envisaged, insofar as the latter are known, but also of the nature and content of those rules and those provisions, to ensure that the agreement is not capable of undermining the uniform and consistent application of the Community rules and the proper functioning of the system which they establish.

The Court here sets out a relatively nuanced and context-specific set of guidelines as to the circumstances in which EU competence would be exclusive on the ground that the internal rules adopted by the EU might be adversely affected by an international agreement.

With the apparent intention of codifying the rules on exclusive competences developed in the case law above by the ECJ, the Lisbon Treaty introduced Article 3 TFEU.

> 1. The Union shall have exclusive competence in the following areas: (a) customs union; (b) the establishing of the competition rules necessary for the functioning of the internal market; (c) monetary policy for the Member States whose currency is the euro; (d) the conservation of marine biological resources under the common fisheries policy; (e) common commercial policy.
>
> 2. The Union shall also have exclusive competence for the conclusion of an international agreement when its conclusion is provided for in a legislative act of the Union or is necessary to enable the Union to exercise its internal competence, or in so far as its conclusion may affect common rules or alter their scope.

The second paragraph of this provision on exclusive external competence, however, seems to be at best an over-simplified translation of the principles set out by the ECJ in *Opinion 1/03*, and it seems extremely likely that further clarification will be required and sought from the ECJ in future case law.[56]

Finally, Article 207 TFEU broadens the scope of the exclusive competence of the EU in the field of the common commercial policy, which now covers all aspects of trade in services except transport, the commercial aspects of intellectual property, as well as foreign direct investment.

(E) SHARED COMPETENCE

Despite the extensive and doctrinally intricate case law on the scope of exclusive competence, and despite the expansion of the scope of the important and extensive common commercial policy by the Lisbon Treaty, a substantial part of the EU's external competence remains joint or shared in nature. We have seen that the main fields of EU external and internal competence, apart from CFSP and also economic and employment policy coordination, are now categorized and listed in Article 2 TFEU as including (i) exclusive (ii) shared, as well as (iii) supplementary and supporting competences. Article 4 TFEU elaborates on the category of 'shared competence' by indicating that the EU shall share competence with the Member States in fields which are not covered by the exclusive competences mentioned in Article 3, including the ill-formulated Article 3(2), and it goes on to list a range of fields including the environment, transport, and the area of freedom, security, and justice.

[56] For criticism of the formulation of this attempt to codify the case law on exclusive external competence, which appeared in the same form in the predecessor Constitutional Treaty, see B de Witte, 'The Constitutional Law of External Relations' in I Pernice and M Poiares Maduro (eds), *A Constitution for the European Union: First Comments on the 2003 Draft of the European Convention* (Nomos, 2004).

In an analysis fifteen years ago which remains useful even after the Lisbon Treaty, MacLeod, Hendry, and Hyett identified five situations of joint or shared external competence.[57] The *first* is where this is expressly determined by the Treaty Article conferring power on the EU. Examples include agreements within the framework of the EMU, development cooperation, and technical cooperation, where Member States have explicitly retained their competence to negotiate in international bodies and to conclude international agreements.[58] The ECJ has ruled that this means that Member States may enter commitments *vis-à-vis* non-Member States either collectively or individually, or jointly with the EU.[59] They may exercise their retained powers either 'collectively in the Council or outside it', and where they act collectively they may adopt acts 'not in their capacity as members of the Council, but as representatives of their governments, and thus collectively exercising the powers of the Member States'.[60]

The *second* situation is where the EU has a power to adopt common internal rules which has not yet been exercised. An example was the case of the common fisheries policy during the transitional period, or the field of patent law at present.[61]

The *third* is where an agreement covers both matters falling within EU competence and matters within Member States competence. The Court ruled to this effect in *Opinion 1/78 (Natural Rubber Agreement)* when it decided that although the field covered by the agreement in question was within the exclusive (common commercial policy) competence of the EU, the financing of this area remained within the competence of the Member States.[62] Since this was a central element of the agreement and the participation of the Member States was required, competence was deemed to be shared.[63]

The *fourth* situation is where EU competence derives from the existence of internal 'minimum rules' where Member States are entitled to maintain higher standards which will not 'affect' the scope of the internal EU rules, as we saw in the case of *Opinion 2/91* on ILO Convention No 170. The *fifth* situation includes certain fields where EU and Member State competence can co-exist without either displacing the other. An example can be found in the field of intellectual property, when the nature of the rights created at the EU level, such as the EU trade mark, is such that they do not necessarily replace national-level intellectual property rights.

We have see above that some categories of shared competence can become exclusive through pre-emption by the adoption of EU action in accordance with the Lugano Opinion guidelines and with Article 3(2) TFEU, while other categories of shared competence, such as development cooperation and humanitarian aid, as well as research, technological development, and space, are explicitly deemed by the Treaty to be non-pre-emptive.[64] Similarly, environmental policy competence is listed as being shared in Article 4(2) TFEU, but Article 191(4) indicates that EU external competence in this field is not to be pre-emptive, and shall be 'without prejudice to Member States' competence to negotiate in international bodies and to conclude international agreements'. There are also other areas of EU policy competence, such as culture, education, vocational training, public health, sport, and others, which cannot become exclusive or pre-emptive through exercise in the external domain, because they are expressly categorized as 'supplementary and coordinating competence' in Article 6 TFEU, as well in the specific Treaty provision which outlines the details of the EU's powers in that field.

[57] I MacLeod, I Hendry, and S Hyett, *The External Relations of the European Communities* (Clarendon Press, 1996) 63–64.

[58] Arts 219(4), 191(4), and 211 TFEU.

[59] See, eg, Case C–316/91 *European Parliament v Council (EDF)* [1994] ECR I–625, on the Lomé Convention.

[61] Case C–431/05 *Merck Genéricos—Produtos Farmacêuticos Lda v Merck & Co* [2007] ECR I–7001, [39]–[47].

[62] *Opinion 1/78* (*International Agreement on Natural Rubber*) [1979] ECR 2871.

[63] See for similar reasoning in relation to the GATS, prior to the adoption of the Lisbon Treaty, *Opinion 1/08 on the Schedules of Specific Commitments annexed to the GATS Agreement* [2009] ECR I–11129.

[64] Art 4(3) and (4), governing humanitarian aid, cooperation, and research and development, provides that 'the exercise of that competence shall not result in Member States being prevented from exercising theirs'.

In other words, the category of shared external competence is a broad and differentiated one, and the exact type of shared competence in any given field may be affected by the case law of the ECJ on the subject, by the Treaty's classification of the competence, and by the terms of the legal basis in the Treaty which outlines the detail of the EU's competence in that field. However, in any case where competence is shared between the Member States and the EU, each is under a duty to cooperate closely due to the requirement of unity in the international representation of the EU.[65]

(F) SUMMARY

i. It is evident from the discussion above that the constitutional core of EU international relations law has been shaped over time by the ECJ, and that it centres on the notions of (a) capacity: whether the EU has the capacity to enter international agreements; (b) competence: whether the EU has external competence, either by express grant under the Treaty or as implied from the existence of internal rules or competence; and (c) exclusivity: whether the external competence of the EU in a given field is exclusively held by the EU or is shared with the Member States.

ii. It is a highly complex, difficult, and detailed case law which does little to assist the clarity and comprehensibility of the EU's international role either for other actors on the global stage, or indeed for students! Nonetheless, the basic foundations of the doctrine laid down in *ERTA* in 1971 remain in place, as is evident from the more recent *Opinion 1/03* on the Lugano Convention.

iii. The Treaty of Lisbon set out to codify this case law by describing the various categories of competences (both internal and external)—exclusive, shared, supplementary and coordinating, and others—conferred upon the EU and setting out a list of the fields they cover. While this brings a certain superficial degree of clarification, many questions remain to be answered about the relationship between the new Treaty provisions and the Court's case law, in particular in relation to the provision concerning implied exclusive competence in Article 3(2) TFEU.

iv. Further, the exact scope and nature of external EU competence cannot be determined from the classification in Articles 3–6 alone, but depend also on the precise terms of Treaty provisions which confer power in a given field, and on the prior legislative activity of the EU in particular fields.

4 A SURVEY OF THE FIELDS OF EU EXTERNAL ACTION UNDER THE TREATIES

Following the overview above of the general constitutional principles underpinning external EU action, we turn now to the foundations in the Treaties, the TEU and the TFEU, of some of the most important external policies. Below, four broad fields of EU external action will briefly be surveyed, before we move on to the special field of the Common Foreign and Security Policy. The four fields are (i) the common commercial policy, (ii) association, partnership, cooperation, and neighbourhood policy, (iii) development, technical cooperation, and humanitarian aid, and (iv) the external dimension of other internal policies.

[65] *Opinion 1/94* (n 41) [108]; *Opinion 1/08* (n 63) [136]; see also the discussion of mixed agreements below.

EU international action is now governed by Part V of the TFEU, entitled 'The Union's External Action'. This Part begins with a 'chapeau clause' in Article 205 TFEU on the principles guiding EU international action,[66] and ends with a solidarity clause in Article 222 governing relations between Member States and the EU in the event of a terrorist attack or natural or man-made disaster. Notably, the CFSP is not included within Part V of the TFEU, but is dealt with separately within the TEU.[67]

The list of fields of action in Part V of the TFEU does not reflect the full breadth or scope of EU external action. We have seen above how external EU power has been implied, according to a kind of principle of parallelism, from internal EU powers and rules. The case law has now been loosely codified[68] in Article 216(1) TFEU:

> The Union may conclude an agreement with one or more third countries or international organisations where the Treaties so provide or where the conclusion of an agreement is necessary in order to achieve, within the framework of the Union's policies, one of the objectives referred to in the Treaties, or is provided for in a legally binding Union act or is likely to affect common rules or alter their scope.

In other words, every policy of the EU has a potential external dimension, including fields such as social policy, environmental policy, and the area of freedom, security, and justice. Notably, Article 216 TFEU reproduces the textual formula of Article 3(2) TFEU on EU exclusive implied powers, although in the context of Article 216 it seems to refer only to the existence of external EU competence rather than to its exclusive nature.

(a) THE COMMON COMMERCIAL POLICY (CCP)

The Lisbon Treaty brought significant changes to the Common Commercial Policy. For many years the scope of the CCP was determined primarily by the rulings of the ECJ, but in recent decades it has been shaped by a kind of dialogue between ECJ rulings and Treaty amendments following a series of Intergovernmental Conferences.

Five important results of the Lisbon Treaty in this field can be noted. *First*, the distinctions previously drawn between various types of trade in services has disappeared, and the CCP now covers trade in services as a whole, meaning a broader scope for the EU's exclusive external competence in this field. *Secondly*, the same is true for the commercial aspects of intellectual property and foreign direct investment.[69] *Thirdly*, transport policy, which is a competence shared between the EU and the Member States under Article 4(2)(g) TFEU, remains outside the scope of the CCP.[70] *Fourthly*, despite the fact that trade in services is now an exclusive EU competence, Article 207(4)(3) TFEU provides exceptionally for unanimity in the field of trade in cultural, audiovisual, social, educational, and

[66] See above at Section 2(b).

[67] See Title V, Ch 2, Arts 23–46 TEU.

[68] For criticism of the codification as establishing a potentially wider basis for implied external powers than before see Cremona (n 38).

[69] The transition from shared to exclusive EU competence in the sphere of foreign direct investment is likely to create difficulties given the large network of existing bilateral investment treaties (BITs) between Member States and third countries. Recent case law has also contributed to the complexity, since the ECJ ruled in Case C–205/06 *Commission v Austria* [2009] ECR I–1301; Case C–249/06 *Commission v Sweden* [2009] I–1335; Case C–118/07 *Commission v Finland* [2009] ECR I–889 that Member States had infringed Art 351 TFEU (ex Art 307 EC) by not taking the necessary steps to ensure the compliance of their BITs with EU law. Following the Court's suggestion to the Commission in these cases 'to take any steps which may facilitate mutual assistance between the Member States concerned and their adoption of a common attitude', the Commission proposed the adoption of a reg establishing transitional arrangements for bilateral investment agreements between Member States and third countries, COM(2010)344 final.

[70] Art 207(5) TFEU.

health services. *Fifthly*, the European Parliament is finally accorded a full legislative role in the CCP. Article 206 TFEU now sets out the aims of the CCP:

> By establishing a customs union . . . the Union shall contribute, in the common interest, to the harmonious development of world trade, the progressive abolition of restrictions on international trade and on foreign direct investment, and the lowering of customs and other barriers.

Article 207(1)TFEU goes on to describe the measures to be adopted within the framework of the CCP:

> The common commercial policy shall be based on uniform principles, particularly with regard to changes in tariff rates, the conclusion of tariff and trade agreements related to trade in goods and services, and the commercial aspects of intellectual property, foreign direct investment, the achievement of uniformity in measures of liberalisation, export policy and measures to protect trade such as those to be taken in the event of dumping or subsidies.

Following the Lisbon Treaty, Article 207(1) TFEU now contains a sentence that apparently gave rise to some anxiety on the part of the Commission that the Council or the EEAS might seek greater involvement in or control over the CCP, which hitherto has been significantly shaped by the Commission:

> [T]he common commercial policy shall be conducted in the context of the principles and objectives of the Union's external action.

The institutional framework of the CCP, which used to be quite distinctive, has also been aligned broadly with other EU decision-making processes. The ordinary legislative procedure now applies to the adoption of measures which define the framework for implementing the CCP.[71] This means that, for the first time, the European Parliament acts as a co-legislator within the CCP. Similarly, the consent of the European Parliament is now required for the conclusion of an international agreement of the CCP.[72]

The CCP covers both unilateral EU measures, for example anti-dumping instruments, and conventional measures negotiated with third countries and international organizations, such as trade agreements. The Court in an early case ruled that the proper functioning of the customs union justified a wide interpretation of the powers which the Treaty conferred in this field.[73] The link between the CCP and the original project of founding the EEC's common market may explain many of the developments in this field, including the Commission's and the ECJ's determination to establish and expand exclusive EU competence in the early years.[74]

In *Opinion 1/75*, the Court defined the scope of the CCP very broadly by reference to the external trade policy of a state,[75] declaring that it was a field which developed progressively, through a combination of internal and external measures, without any priority of one kind over the other.[76] The Court ruled further that the defence of the Community's common interest, the need to

prevent distortions of competition, and the principle of Member State loyalty to the EC meant that competence must be exclusive.[77] However, although the ECJ continued to confirm the exclusivity of EU competence in the CCP, it did not interpret this exclusivity strictly. Some scope was left for gradual implementation of the CCP, during which period the Member States were not precluded from acting, provided their activities were regulated by EU law. In *Donckerwolcke* the ECJ ruled that the Member States could deviate from CCP rules, albeit only under 'specific authorization' by the EU.[78]

The Court's dynamic construction of the scope of the CCP was significant in the 1970s when there was a tendency towards a more regulatory and less liberalizing approach to international trade. This move involved also taking the concerns of developing countries more seriously into account. In *Opinion 1/78 (Natural Rubber Agreement)*, the ECJ emphasized the complex objectives of commodities agreements of this kind, and ruled that the EU must be able to avail itself of 'more elaborate means' to further the development of international trade.[79] Thus the CCP could not be restricted only to the traditional aspects of external trade, and 'the Treaty … does not form a barrier to the possibility of the Community's developing a commercial policy aiming at a regulation of the world market for certain products rather than at a mere liberalization of trade'.[80] Ultimately the Court ruled that the EU had exclusive competence in substantive terms to enter into the agreement, but that the role of the Member States in financing the agreement meant that their involvement was also required. This approach towards trade agreements pursuing developmental aims was confirmed in the *General System of Preference (GSP)* judgment.[81]

The international trade policy picture changed again after 1986 with the Uruguay Round of trade negotiations, which included coverage of trade in services, trade-related aspects of intellectual property rights, and trade-related investment measures. These issues were brought together with the former GATT in the agreements establishing the World Trade Organization (WTO) in 1994. Since the Commission considered that the Community had exclusive competence to sign the final WTO agreement, but the Member States did not wish to give up their powers in this respect, the Court was asked for its opinion. In *Opinion 1/94*, the ECJ decided that all WTO agreements on trade in goods fell within the EU's CCP. Trade in services could not, as a matter of principle, be excluded from the scope of what was then Article 133 EC (now Article 207 TFEU), [82] but the ECJ ruled that it must take into account the definition of trade in services in the GATS. The Court's conclusion was that competence over *cross-border* services was exclusive, but that the Member States in principle retained their competence over other modes of supplying services.[83] Transport services did not fall within the CCP but remained implied powers under the EC Treaty chapter on transport, and therefore were shared between the EU and the Member States.[84] The Court ruled to the same effect for much of the TRIPs Agreement. Consequently, since the EU and the Member States were jointly competent to conclude both GATS and TRIPs, the whole WTO Agreement was concluded as a 'mixed agreement'.

Opinion 1/94 was an important opinion which marked the end of the expansion of EU competence under the CCP, as well as the end of the period of judicial activism with regard to exclusive

[84] These powers could become exclusive under the conditions set in Case 22/70 *ERTA* (n 29).

EU competence.[85] Subsequent cases confirmed this and indicated that trade measures would not necessarily always be perceived as trade or commercial policy measures if they pursued other objectives such as environmental policy.[86]

The Treaties of Amsterdam and Nice made further changes, extending the scope of the CCP further and eventually including agreements relating to services and intellectual property while ruling out exclusive competence in this respect, and providing exceptions for other sensitive areas of shared competence.[87] The lack of clarity resulting from the Nice Treaty amendments to the CCP gave rise to the ruling of the ECJ in *Opinion 1/08* on the division of competence between EU and Member States in the conclusion of 'horizontal' transport agreements.[88]

As we have seen above, the Lisbon Treaty wrought important further changes to the development of the CCP. EU competence no longer depends on a distinction between various categories of trade in services, but the CCP covers trade in services as a whole as well as the commercial aspects of intellectual property and foreign direct investment, thus expanding significantly the exclusive external competence of the EU. Transport however remains outside the CCP[89] and is a shared competence,[90] which is likely to mean that trade agreements containing significant provisions on transport will continue to be 'mixed' agreements.[91]

Finally, joint involvement of Member States and the EU in the making of agreements may well also remain in certain sensitive spheres due to the new provisions governing trade in cultural and audiovisual services, and in social, education, and health services which, by way of derogation from the majority voting applicable under the ordinary legislative procedure, preserve Council unanimity where the agreements being negotiated risk 'prejudicing the Union's cultural and linguistic diversity' or 'disturbing the national organization' of social, educational, and health services or prejudicing the responsibility of Member States to deliver them.[92]

Last but not least, the European Parliament is finally accorded full legislative power alongside the Council in the field of the CCP. It is up to the Parliament and the Council, adopting regulations in accordance with the ordinary legislative procedure, to define the framework for implementing the common commercial policy.[93] A second significant change is the required consent of the European Parliament for the conclusion of international trade agreements.[94] While the Parliament is likely to develop new modalities for exercising this new power, and to bring democratic and human rights concerns to bear more on the goals of EU trade policies, the Council is clearly concerned about the impact of growing parliamentary involvement in external relations.[95]

(B) ASSOCIATION, PARTNERSHIP, COOPERATION, AND NEIGHBOURHOOD RELATIONS

Article 217 TFEU provides:

> The Union may conclude with one or more States or international organisations agreements establishing an association involving reciprocal rights and obligations, common action and special procedure.

The power to conclude Association Agreements was, apart from the CCP, the only express external relations power of the EU until the Single European Act in 1987. The first Association Agreements were concluded with Greece and Turkey, and with the African, Caribbean, and Pacific (ACP) countries under the Yaoundé Convention, a few years after the entry into force of the EEC Treaty.[96] Many others have followed since. The Association Agreements concluded with the states of central and eastern Europe were known as 'Europe Agreements', and took account of the fact that these states were likely soon to become EU members. These agreements were extensively invoked before the Court, which ruled consistently that, like other international agreements, they form an integral part of the EU legal order and that the ECJ enjoys broad jurisdiction over their provisions.[97]

The Treaty itself provides no indication of what an association should involve apart from the skeletal provisions of Article 217 TFEU. The initial Association Agreements in fact included measures covering the entire subject matter of the Treaty.[98] Amongst the most important of the Association Agreements currently in force are the agreements with the ACP countries, most recently the revised Cotonou Agreement. Other important Association Agreements include the European Economic Area (EEA) agreement, the stabilization and Association Agreements with some of the Western Balkans, and the Euro-Mediterranean Agreements.

The EU also concludes other agreements which are similar to Association Agreements but provide for less intensive forms of integration or a narrower range of fields. Examples are the cooperation and partnership agreements concluded with the countries of the ex-Soviet Union, now members of the Commonwealth of Independent States (CIS), and interregional cooperation agreements with the countries of the Latin American, South-East Asian, and Arab states.

The Lisbon Treaty provided a new legal basis for the EU to conclude specific agreements with neighbouring countries, establishing a 'special relationship' with the latter and 'aiming to establish an area of prosperity and good neighbourliness, founded on the values of the Union and characterized by close and peaceful relations based on cooperation'.[99] Article 8(1) TEU thus gives Treaty recognition to the policy introduced by the EU in 2004 and known as the European Neighbourhood Policy.[100] Neighbourhood agreements may contain 'reciprocal rights and obligations' as well as the possibility of undertaking activities jointly.[101] Considering the position of

[99] Art 8(1) TEU.

[100] The ENP has been described as 'a particularly developed expression of a policy designed to meet the challenge of ensuring coherence between the three EU pillars': M Cremona and C Hillion, 'L'Union fait la force? Potential and Limitations of the European Neighbourhood Policy as an Integrated EU Foreign and Security Policy', EUI Working Paper 2006/39.

[101] Art 8(2) TEU.

this new legal basis in the Treaties, outside the title of the TFEU devoted to EU external action, and given the absence of any specific procedure, neighbourhood agreements do not seem to be linked with any particular one of the categories of agreements described above. The introduction of this provision may be politically explained in the light of the successive enlargements of the past decade. If the EU considers itself to be coming closer to its outer geographical limits, it may be creating a new framework for those neighbouring countries that may not be eligible for membership.

(c) DEVELOPMENT POLICY, TECHNICAL COOPERATION, AND HUMANITARIAN AID

Prior to the adoption of the Maastricht Treaty in 1993, there was no explicit EU Treaty basis for these three fields. Instead, they had been developed on the basis of other external policies including commercial policy and association, as well by using the residual powers provision in Article 352 TFEU (ex Article 308 EC, and before that Article 235 EEC).

We saw in *Opinion 1/78* that the ECJ accepted the use of trade instruments with a development dimension, although it ruled that the provision of financing by Member States would result in an agreement of the kind at issue being 'mixed'.[102] Following that case, the association and trade legal bases of the Treaty were used for many agreements concluded with developing countries. The Court in the *Bangladesh* case ruled that the Community did not have exclusive competence in the field of humanitarian aid, and that Member States were not precluded from exercising their competence collectively within the Council or outside it.[103] The *Parliament v Council (Lomé IV)* ruling established that EU competence in the field of development was not exclusive, that Member States were entitled to enter into commitments themselves, and that competence to implement the EU's financial assistance was shared by the EU and its Member States.[104]

The Maastricht Treaty subsequently inserted an independent Treaty basis for development policy, which is now to be found in Article 208 TFEU, and the Nice Treaty later provided a legal basis for 'economic, financial and technical cooperation' with third states, now to be found in Article 212 TFEU. In both of these areas, EU policy is expressly required to contribute to the general objective of developing and consolidating democracy and the rule of law, and to that of respecting human rights and fundamental freedoms.

In *Parliament v Council* (*European Investment Bank Guarantee*), the ECJ clarified the relationship between these fields.[105] The Court ruled that it cannot be inferred from the reference to 'third countries' in Article 212 TFEU (ex Article 181a EC) that all economic, financial, and technical cooperation with developing states may be undertaken on the sole basis of this provision. Otherwise, there would be a risk of this provision being used to circumvent the specific objectives of development cooperation set out in Article 208 TFEU (ex Article 177 EC). Insofar as a measure pursues specific *development* objectives, it must therefore be based on Article 208 TFEU. Since the entry into force of the Lisbon Treaty, the existing joint legislative powers of the European Parliament are extended beyond the field of development cooperation to include also the field of economic, financial, and technical cooperation.

[105] Case C–155/07 *European Parliament v Council* [2008] ECR I–8193.

(D) EXTERNAL DIMENSIONS OF OTHER INTERNAL POLICIES

While the external dimension of many internal policies was initially developed on the basis of the implied powers doctrine and the residual power clause of Article 352, later Treaty amendments provided a range of express external powers.

One of the most important such fields of external EU action is environmental policy. This is a good example of a field in which internal and external activities are often so closely linked that EU internal competence would be limited in effect without its external counterpart.[106] As soon as an explicit environmental policy title was inserted into the EEC Treaty by the Single European Act, provision was also made for external competence in Article 191(4) TFEU (ex Article 174(4) EC). The Lisbon Treaty has added a new express external power for the EU to combat climate change in Article 191(1). External competence in the environmental field is shared with the Member States.[107]

Other areas of EU external policy include education,[108] vocational training,[109] culture,[110] public health,[111] in which the EU is explicitly required to foster cooperation with third countries and international organizations. These areas are now categorized by Article 6 TFEU on competences as supporting, supplementary, or coordinating competences. Other areas providing for cooperation with third countries are trans-European networks under Article 171(3) TFEU and research, technological development, and space under Article 186 TFEU.

In the area of social policy, Article 153 TFEU (ex Article 118 EC) was held to confer competence to conclude international agreements, even though the EU's internal legislative competence in the field was defined in rather subsidiary terms. Such external competence, as we have seen from *Opinion 2/91*[112] and now from Article 3(2) TFEU, becomes exclusive where there is EU legislation which could be affected by the provisions of the international agreement.

The operation of the single currency and of monetary union also requires international cooperation. Article 219 TFEU provides for the conclusion of international agreements on an exchange-rate system for the Euro in relation to non-EU currencies.[113]

The field of energy policy was given an express legal basis in Article 194 TFEU by the Lisbon Treaty, and although external competence is not explicitly mentioned, the EU has exercised implied external competence in the field for some time.[114] This competence is shared between the EU and the Member States.[115]

With regard to policies concerning 'Border checks, asylum and immigration', which are part of new Title V of Part III of the TFEU (the Area of Freedom, Security, and Justice, AFSJ), there is clearly, on the basis of *ERTA* reasoning and Article 3(2) TFEU, competence to conclude agreements over the

[106] D Thieme, 'European Community External Relations in the Field of the Environment' (2001) 10 European Environmental Law Review 252.

[107] Art 4(2)(e) TFEU. Art 191(4) TFEU also provides: 'within their respective spheres of competence, the Union and the Member States shall cooperate with third countries and with the competent international organisations. The arrangements for Union cooperation may be the subject of agreements between the Union and the third parties concerned.'

[108] Art 165(3) TFEU.

[109] Art 166(3) TFEU.

[110] Art 167(3) TFEU.

[111] Art 168(3) TFEU.

[112] *Opinion 2/91* (n 45).

[113] For controversy over whether the EU or the ECB (with its own separate legal personality) has external competence in this field see C Zilioli and M Selmayr, 'The External Relations of the Euro Area: Legal Aspects' (1999) 36 CMLRev 273; C Herrmann, 'Monetary Sovereignty over the Euro and External Relations of the Euro Area: Competences, Procedures and Practice' (2002) 7 EFA Rev 1, 23.

[114] For a brief overview of EU activity in the field see the European Council document 'The External Dimension of European Union Energy Policy', available at www.european-council.europa.eu/media/171260/ec04.02.2011-external-dimension-factsheetfinal.en.pdf.

[115] Art 4(2)(i) TFEU.

whole area.[116] Although the EU had already concluded such agreements,[117] the Lisbon Treaty added an express external competence for the EU to conclude readmission agreements with third countries in relation to third-country nationals who do not fulfil the conditions required by one of the Member States.[118] More generally, migration issues have been integrated into the EU's overall relations with third countries. Finally, the ECJ held in *Opinion 1/03* held that the EU had exclusive competence to conclude the Lugano Convention on jurisdiction and the recognition and enforcement of judgments in civil and commercial matters, a subject covered by Title V of Part III of the TFEU.[119]

Since the entry into force of the Lisbon Treaty, the former third Pillar of the EU governing Police and Judicial Cooperation in Criminal matters (PJCC) has, subject to a transitional period,[120] been integrated into Title V of Part 3 of the TFEU on the AFSJ. Even though the AFSJ legal regime maintains certain specificities in comparison with other fields of EU competence,[121] it is subject to the general rules and principles governing EU international action. The objectives of this policy field include international cooperation in criminal matters, facilitating mutual recognition of judgments, police and judicial cooperation in criminal matters having a cross-border dimension, and perhaps the conclusion of international agreements in fields where common EU rules are established concerning the definition of serious cross-border criminal offences and sanctions.[122]

The EU has recently concluded an agreement with the US on the processing and transfer of Financial Messaging Data for the purposes of the Terrorist Finance Tracking Programme, using Articles 87 and 88 TFEU on police cooperation as a legal basis.[123] Even before the entry into force of the Lisbon Treaty, the Union had already negotiated and concluded international agreements with third countries or international organizations in the field of PJCC.[124]

Finally, it should be noted that some of the important agencies set up on the basis of former Title VI TEU, in particular Europol and Eurojust, have been vested with their own powers to conclude agreements with third countries and international organizations.[125]

5 THE COMMON FOREIGN AND SECURITY POLICY

The emergence of the EU's Common Foreign and Security Policy, formerly the Second Pillar, has been examined briefly in Chapter 1. The focus of the present section is on the status of the CFSP within the new institutional framework, which was a matter of significant disagreement amongst the negotiators of the Constitutional Treaty and the Lisbon Treaty. Ultimately, despite the single legal personality of

[116] M Cremona, J Monar, and S Poli (eds), *External Dimensions of the Area of Freedom, Security and Justice* (Peter Lang-PIE, 2011); M Cremona, 'EU External Action in the JHA Domain: A Legal Perspective', EUI Working Paper in Law 24/2008.

[120] Lisbon Treaty Protocol No 36, Arts 9 and 10.

[121] Ch 25.

[122] Arts 82 and 83 TFEU. These areas of criminal activity are: terrorism, trafficking in human beings and sexual exploitation of women and children, illicit drug trafficking, illicit arms trafficking, money laundering, corruption, counterfeiting of means of payment, computer crime and organized crime. See also the agreement signed between the EU and Japan on mutual legal assistance in criminal matters, [2010] OJ L39/20.

[123] [2010] OJ L195/5.

[124] The EU began to exercise its contractual powers in this field in 2003 by concluding three agreements: two with the US on extradition and mutual legal assistance respectively, and one with Iceland and Norway on the application of certain provisions of the EU Convention on Mutual Assistance in Criminal Matters of 2000.

[125] Europol has already concluded a wide range of bilateral operational or strategic agreements with other states and international organizations: Council Decision 2009/371/JHA of 6 April 2009 establishing the European Police Office [2009] OJ L121/37, Art 23.

the EU, the CFSP remains apart from the other fields of EU action and is governed by a different set of institutional and procedural rules.

The key differences, reflected in the terms of Article 24(1) paragraph 2 TEU, are that (i) the institutions which have the primary role in shaping the CFSP are the European Council and the Council, (ii) the Commission's role is very much secondary and the Parliament is restricted to a mainly consultative role, (iii) no 'legislative acts' can be adopted, but only the range of special CFSP instruments described below, (iv) the CFSP is to be implemented and carried out by the High Representative and by the Member States, and (v) the ECJ has no jurisdiction over the provisions of the CFSP, except for the boundary-policing provision of Article 40 TEU and in relation to challenges against individual sanctions in accordance with Article 275 TFEU.

(A) THE SCOPE OF THE CFSP

The Treaty itself refers to the scope of the CFSP in very wide terms, as covering 'all areas of foreign policy and all questions relating to the Union's security'.[126] Two apparent aims of the Treaty provisions which articulate the relationship between the CFSP and the rest of the EU's action on the international scene are to ensure consistency and a significant degree of autonomy for the CFSP. Article 23 TEU declares:

> The Union's action on the international scene [in the field of CFSP] shall be guided by the principles, shall pursue the objectives of, and be conducted in accordance with the general provisions [governing EU external action as a whole].

As we have seen above, the objectives listed in Article 21 TEU governing EU external action as a whole include support for democracy, the rule of law, human rights and international law, preservation of peace and security in accordance with the UN Charter, the aims of the Helsinki Final Act, and the Paris Charter. At the same time, other Treaty provisions demonstrate the importance of the CFSP within the overall aims of the EU and other external policies. Article 22(1) TEU, paragraph 2 declares that:

> Decisions of the European Council on the strategic interests and objectives of the Union shall relate to the common foreign and security policy and to other areas of the external action of the Union.

The maintenance and reinforcement of the distinctiveness of the CFSP even within the newly integrated EU with its single legal personality are further underscored by the amended clause governing the relationship between the CFSP and other parts of EU policy. While before the adoption of the Lisbon Treaty priority was given to what was then the Community pillar over the CFSP,[127] Article 40 TEU now sets the CFSP on an equal footing with all other EU policies and provides that neither shall affect the other:

> The implementation of the common foreign and security policy shall not affect the application of the procedures and the extent of the powers of the institutions laid down by the Treaties for the exercise of the Union competences referred to in Articles 3 to 6 of the Treaty on the Functioning of the European Union.

[126] Art 24 TEU.

[127] Former Art 47 TEU had provided that 'nothing in this Treaty [the TEU] shall affect the Treaties establishing the European Communities or the subsequent Treaties and Acts modifying or supplementing them'. The ECJ reinforced this priority in its case law: see, eg, Case C–91/05 *Commission* v *Council (ECOWAS)* [2008] ECR I–3651.

> Similarly, the implementation of the policies listed in those Articles shall not affect the application of the procedures and the extent of the powers of the institutions laid down by the Treaties for the exercise of the Union competences under this Chapter.

Article 24 TEU provides that the CFSP is to include all questions relating to the security of the Union, including the progressive framing of a common defence policy, which may lead to a common defence.

The scope of the CFSP is thus potentially extremely broad,[128] and is described both in terms of its objectives and of the instruments supplied to achieve those objectives. These instruments include *general guidelines* adopted by the European Council, *decisions* adopted by the Council defining specific operational *action* by the Union where it is deemed to be required, *positions* adopted by the Council, which define the approach of the Union to a particular matter of a geographical or thematic nature, and *arrangements* for the implementation of the two latter categories of decisions.[129] Amongst the other instruments mentioned which contribute to building the CFSP are *information and consultation* on any matter of foreign and security policy of general interest and *international agreements*.

There is clearly an overlap of competence between the CFSP and other external policies of the EU.[130] Given that it covers 'all areas of foreign policy and all questions relating to the Union's security', economic matters may clearly be implicated. Yet since the differences between the procedures, the powers of the institutions, and the guarantees for individuals such as judicial oversight are so important, the question of the borderline between the CFSP and other areas of EU powers is crucial.

The limits of Member State powers when acting outside the scope of what was then the Community were initially addressed by the Court in cases pre-dating the creation of the CFSP, when the conduct by Member States of their foreign policies was subject to 'European political cooperation' (EPC) regulated by the SEA. In *Centro-Com*, concerning action by the Member States pursuant to a UN Sanctions Regulation against Serbia and Montenegro, the ECJ ruled that the Member States' powers 'must be exercised in a manner consistent with Community law'.[131] Even if they pursued foreign and security objectives, measures the effect of which was to restrict the export of products could not be treated as falling outside the scope of the CCP, but had to respect the provisions of the CCP. Applied to the CFSP context, this implies that even when acting within the scope of the CFSP the Member States must respect other aspects of EU (formerly EC) law. Secondly, the ECJ ruled that although the CFSP applies in principle to all areas of foreign and security policy, it does not necessarily cover areas where there is another competence such as the CCP.[132]

This approach was confirmed and clarified by the ECJ in its *Ecowas* judgment.[133] The Council adopted a joint action (CFSP) on combating the spread of small arms and light weapons. Amongst the measures covered by the joint decision to achieve these goals was the provision of assistance to third countries. In December 2004, the Council adopted a decision which implemented the contested

[129] Art 25 TEU.

[130] R Baratta, 'Overlaps Between European Community Competence and European Union Foreign Policy Activity' in E Cannizzaro (ed), *The European Union as an Actor in International Relations* (Kluwer, 2002).

[131] Case C–124/95 *R v HM Treasury and Bank of England, ex parte Centro-Com* [1997] ECR I–81, [25].

[132] The later *Airport Transit visas* case suggested that this was so not only in relation to exclusive competence such as the CCP, but also in other fields such as immigration and visa policy: Case C–170/96 *Commission v Council (Airport Transit Visas)* [1998] ECR I–2763. Although this case concerned the delimitation between the First and the Third Pillars, the reasoning is applicable by analogy to the relationship between other EU policies and the CFSP.

[133] Case C–91/05 (n 127); B Van Vooren, 'The Small Arms Judgment in an Age of Constitutional Turmoil' (2009) 14 EFAR 231; C Hillion and R Wessel, 'Competence Distribution in EU External Relations after ECOWAS: Clarification or Continued Fuzziness' (2009) 46 CMLRev 551; J Heliskoski, 'Small Arms and Light Weapons within the Union's Pillar Structure' (2008) 33 ELRev 898.

joint action to enable the EU to make a financial contribution to the Economic Community of West African States (ECOWAS) which had adopted a Moratorium on Small Arms and Light Weapons. The Commission criticized the choice of the second (CFSP) pillar as a legal basis for this decision, arguing that it impinged upon EC competences in the area of development cooperation and infringed former Article 47 EU.[134] The ECJ endorsed the Commission's view and ruled that a measure having legal effects adopted under the CFSP 'affected' the provisions of what was then the EC Treaty within the meaning of Article 47 EU 'whenever it could have been adopted on the basis of the EC Treaty, it being unnecessary to examine whether the measure prevents or limits the exercise by the Community of its competences'. The ECJ rejected the argument that, by comparison with the objectives of the disputed measure to preserve peace and strengthen international security, its concern to assist the development of the countries concerned was purely incidental, and the measure was annulled. [135]

Article 47 TEU, which was central to the Court's ruling in ECOWAS, has now been replaced by Article 40 TEU, which no longer subordinates the CFSP to other EU policies, but stipulates instead that neither field shall affect the application of the procedures or the extent of exercise of the powers of the other. This change was part of the bargain amongst Lisbon Treaty negotiators, within which the *quid pro quo* for the full integration of the PJCC within the general EU framework was the enhancement and upgrading of the status of the CFSP as an autonomous policy field with its own set of norms, particularly in its relationship to the rest of the EU law and policy framework. Each field now stands on an equal footing, which is likely to create significant complexity when a legal measure touching on both CFSP and other EU policy fields is to be adopted, and there are incompatible procedures to be followed within each field.[136] This issue will undoubtedly return to the ECJ again before too long.[137]

The famous *Kadi* case concerning the legality of EU 'smart sanctions' (regulations imposing anti-terrorist sanctions on *individuals*) also dealt with the question of overlapping competences, this time as between provisions of the former TEU and several former provisions of the EC Treaty.[138] The ECJ gave a convoluted ruling on the relationship between CFSP objectives and the various EC Treaty provisions which ultimately upheld the use of the legal bases in question, but most of the judgment on this question has now been rendered redundant by the new provision inserted by the Lisbon Treaty in Article 75 TFEU permitting the adoption of restrictive measures against individuals.[139] One part of the ruling on this issue which may however retain its relevance was the Court's rejection of any direct connection between the EU flexibility clause (now Article 352 TFEU) and the objectives of the CFSP.[140] This suggests that the ECJ is likely to be protective of the CFSP and to protect it from encroachment by the exercise of other EU competences, in particular in the light of the new provision in Article 40 TEU.

(B) THE CONSTITUTIONAL NATURE OF THE CFSP

We have seen in Chapter 1 how the CFSP initially emerged from a history of intergovernmental cooperation between the states on foreign policy matters, known as EPC, and was enshrined in the TEU by

[134] For the text of former Art 47 TEU see (n 127).

[139] Art 215(2) TFEU.

[140] Cases C–402 and 415/05 (n 138) [197].

the Maastricht Treaty. However, the CFSP has since developed and deviated significantly from EPC practice at that time.

The TEU provided that the Member States were under an obligation to support the Union's external and security policy actively and unreservedly, in a spirit of loyalty and mutual solidarity. They were henceforth required to work together to enhance and develop their mutual political solidarity and to refrain from any action contrary to the interests of the Union or likely to impair its effectiveness as a cohesive force in international relations. All of these duties are laid down in the EU Treaties as binding legal obligations.

While some of the failures of the CFSP and the discord between Member States on high-profile situations like the Iraq war and, more recently, the conflict in Libya suggest a mixed record, in fact the CFSP system has enabled a reasonable amount of progress to be made towards the coordination of national foreign policies on a range of issues. This is despite the fact that no formal mechanism of supranational enforcement of the various obligations of solidarity and loyalty has been established, even under the Lisbon Treaty.

As we have seen above, a sharp separation of the CFSP from the rest of the EU legal system is impossible. Following the logic of the ECJ in its *Pupino* ruling,[141] for example, the principle of sincere cooperation as now enshrined in Article 4(3) TEU applies also to the Member States when they act within the scope of the CFSP.

From a constitutional point of view, CFSP instruments are undoubtedly legal in nature, but their legal nature is somewhat different from that of the other legislative instruments adopted by the EU. Article 25 TEU stipulates that the EU shall conduct the CFSP by defining general guidelines, adopting decisions which define actions and positions to be undertaken by the EU, or adopting decisions defining arrangements for the implementation of such decisions.[142] It has been argued that CFSP instruments are best understood as 'international law decisions', which bear a close affinity to EU law in that they are binding upon both Member States and the EU institutions, and are adopted by the Council as the primary decision-making body.[143] Finally, although this characterization may be disputed by some, it has been suggested that the core features of supranational EU law, primacy, direct effect, and the ERTA principles, are not entirely absent from the law of the CFSP.[144]

(c) INTERACTIONS BETWEEN THE CFSP AND THE ECONOMIC DIMENSIONS OF SECURITY

Under the previous pillar structure, EU external relations law seemed more preoccupied with preventing interaction between the different pillars than promoting their harmonious coexistence.[145] Yet foreign policies based on the CFSP and on other EU policies necessarily overlap, and conflicts over the proper legal basis arise. The European Security Strategy of 2003 marked an important shift in the attempt to make strategic use of all the external policies of the EU, and influenced the mainstreaming of security concerns into other foreign policy activities including development cooperation and Association Agreements.[146] Nonetheless, this approach also raises some of the legal questions addressed above in the discussion of the interaction between the CCP and national foreign policies in the case of economic sanctions.[147]

[147] (N 131).

Dual-use goods are products which can be used for both civil and military purposes, and they are regulated by two different sets of constitutional rules: the general EU rules apply in relation to their civil use, and Member States' rules apply with regard to questions of national security.[148] They fall within the scope of the 'public security' exception in Article 36 TFEU which, according to the ECJ in the *Aimé Richardt* case, covers both a Member State's internal and external security.[149] Initially, the EU regime for export control was based on both the CFSP and the EC pillars with the main emphasis on the former, but in the *Werner* and *Leifer* cases the ECJ ruled that measures the effect of which was to restrict the export of certain products could not be treated as falling outside the scope of the CCP on the ground that they had foreign policy and security objectives.[150] Since the CCP is a field of exclusive EU competence, Member States could act only on the basis of a specific authorization. Following these rulings the EU approach to dual-use goods changed and now operates solely on the basis of a regulation, and national measures regarding export controls must operate within the limits set by this regulation.[151]

The imposition of economic sanctions by the EU, however, was differently organized. Even before the Treaty provided for a specific mechanism, the EU proceeded by following an EPC decision on the appropriateness of particular sanctions, while the relevant substantive rules were contained in a regulation adopted under the former Article 133 EC.[152] The Maastricht Treaty then established an inter-pillar mechanism, and the EU adopted a range of economic sanctions, including trade embargoes, financial sanctions, and other prohibitions on lending or investment.[153] The Lisbon Treaty has adapted this system in light of the new institutional structure of the EU, but without fundamentally changing the two-prong mechanism. Article 215 TFEU provides:

> 1. Where a decision, adopted in accordance with Chapter 2 of Title V of the Treaty on European Union, provides for the interruption or reduction, in part or completely, of economic and financial relations with one or more third countries, the Council, acting by a qualified majority on a joint proposal from the High Representative of the Union for Foreign Affairs and Security Policy and the Commission, shall adopt the necessary measures. It shall inform the European Parliament thereof.
>
> 2. Where a decision adopted in accordance with Chapter 2 of Title V of the Treaty on European Union so provides, the Council may adopt restrictive measures under the procedure referred to in paragraph 1 against natural or legal persons and groups or non-State entities.
>
> 3. The acts referred to in this Article shall include necessary provisions on legal safeguards.

In other words, a decision adopted under the CFSP decision-making process is necessary as a first step, and it is then implemented according to the TFEU procedure outlined above.[154]

[148] Art 346(1)(b) TFEU provides that: any Member State may take such measures as it considers necessary for the protection of the essential interests of its security which are connected with the production of or trade in arms, munitions, and war material; such measures shall not adversely affect the conditions of competition in the internal market regarding products which are not intended for specifically military purposes.

[151] Reg 428/2009 [2009] OJ L134/1.

[152] Before the EPC emerged in the 1980s, Member States adopted sanctions following the so-called 'Rhodesia doctrine' on the basis of Art 297 EC, which provides for Member States to consult each other with a view to taking together the steps needed to prevent the functioning of the common market being affected by the necessity to adopt such measures.

[153] P Koutrakos, *Trade, Foreign Policy & Defence in EU Constitutional Law* (Hart, 2001) 69.

[154] A different procedure (with joint legislative power for the European Parliament) applies when the EU adopts restrictive measures in the area of freedom, security, and justice, to prevent and combat terrorism and related activities (Arts 75 and 76 TFEU).

Chapter 11 of this book describes a number of challenges to the compatibility of such sanctions with the EU's fundamental rights regime. In the *Bosphorus* case, the ECJ upheld the compatibility of sanctions imposed by a regulation implementing a UN Security Council resolution with the right to property and the freedom to pursue a commercial activity, and its approach was broadly upheld in a later challenge before the European Court of Human Rights.[155] In a series of subsequent cases concerning 'smart sanctions' directed against particular persons and organizations, the ECJ ruled that the fact that these sanctions were mandated by the Security Council did not prevent the ECJ from reviewing their compatibility with fundamental rights, and the Court proceeded to annul several such measures for violation of the right to a fair hearing and access to a judicial remedy.[156]

It is clear from the discussion above of the overlap between EU security and economic powers and policies that the EU is now attempting to manage this overlap more harmoniously through the use of legislation (the Dual-use Goods Regulation) and Treaty provisions (Article 215 TFEU) which expressly coordinate their interaction.

6 THE CONCLUSION OF INTERNATIONAL AGREEMENTS BY THE EU AND OTHER FORMS OF EU INTERNATIONAL PRACTICE

International agreements are probably the most important form of external lawmaking by the EU. The Lisbon Treaty has partly unified the procedure for the conclusion of such agreements, ending the former distinction between EC and EU procedures.[157] The international practice of the EU also includes participation in international organizations. Both forms of international activity have important ramifications internally, as well as internationally through the creation of obligations which may entail international responsibility.

(a) EU PROCEDURES FOR CONCLUDING INTERNATIONAL AGREEMENTS

Article 218 TFEU establishes a general procedure for the exercise of treaty-making powers. This provision stipulates the division of tasks between the institutions and the various voting procedures. While the procedure is largely uniform for all international agreements, there are important exceptions for agreements touching on the CFSP. Article 218(2)–(4) provides:

> 2. The Council shall authorise the opening of negotiations, adopt negotiating directives, authorise the signing of agreements and conclude them.
>
> 3. The Commission, or the High Representative of the Union for Foreign Affairs and Security Policy where the agreement envisaged relates exclusively or principally to the common foreign and security policy, shall submit recommendations to the Council, which shall adopt a decision authorising the

[156] Cases C–402/05 and 415/05 P *Kadi* (n 138); Cases C–399 and 403/06 P *Hassan and Ayadi v Council and Commission* [2009] ECR I–11393; Case T–318/01 *Othman v Council and Commission* [2009] ECR II–1627; Case T–135–138/06 *Al-Faqih et al v Council*, 29 Sept 2010.

[157] While EC agreements were concluded under former Art 300 EC, CFSP agreements were concluded under Art 24 EU, and agreements in the field of PJCC under former Art 38 EU.

opening of negotiations and, depending on the subject of the agreement envisaged, nominating the Union negotiator or the head of the Union's negotiating team.

4. The Council may address directives to the negotiator and designate a special committee in consultation with which the negotiations must be conducted.

The first step of the procedure is thus the *negotiation* of an agreement, which is, in principle, the task of the Commission. The Commission generally initiates the whole process, albeit under the political leadership of the European Council. The directives which form the basis for the Commission's actions are informally known as 'negotiating mandates'. These tend to be rather general in nature, although the Council sometimes specifies the result which is sought and the margins of the concessions which the Commission is permitted to make. Following the Lisbon Treaty, however, in the case of an agreement which relates exclusively or principally to the CFSP, we see above that it is the High Representative who has exclusive power to recommend the opening of negotiations. The Treaty gives little guidance to the Council in designating the negotiator, indicating only that it 'depends on the subject' of the agreement envisaged. While negotiations are normally conducted by the Commission,[158] the Presidency or even the High Representative can be designated as negotiator or head of the negotiating team where an agreement touches on the CFSP.

The second stage of the procedure is the signature and the conclusion of the agreement. In accordance with the terms of Article 218 TFEU the Council exercises this power in conjunction, in most cases, with the European Parliament,[159] as will be outlined further below. Qualified majority in the Council is required for the signing and conclusion of an agreement, just as it is for the opening of the negotiations.[160] However, for both stages there are four exceptional cases in which unanimity is required. The first is when the agreement covers a field for which unanimity is required for the adoption of internal rules. The second is when it concerns an association agreement referred to in Article 217. The third case is where a cooperation agreement is concluded with a country which is officially a candidate for the accession. The fourth is in the case of agreement on accession of the EU to the European Convention on Human Rights, which will enter into force only after it has been approved by the Member States in accordance with their respective constitutional requirements.[161] The significant broadening of the powers of the European Parliament in external relations is, as we shall see below, one of the important features of the Lisbon Treaty changes.

In the case of an agreement which is part of the Common Commercial Policy, the procedure is further modified by Article 207(3) TFEU and involves a specialized Council-appointed committee to assist the Commission in conducting negotiations. Similar committees may be appointed to assist the Commission in the negotiation of other types of agreement.[162] These committees are evidently intended to ensure control by Member States over the direction of the negotiations.

The institutional procedures may also be varied in the case of agreements concerning monetary or foreign exchange regime matters. According to Article 219(3) TFEU the Council decides, by qualified majority on a recommendation from the Commission and after consulting the ECB, on the

[158] The most recent Framework Agreement between the European Parliament and the Commission requires the Commission to facilitate a delegation of Members of Parliament as observers within EU delegations, although the Council has challenged this aspect of the Framework Agreement, (n 95).

[159] The Council may however decide to delegate the concluding power to the Commission, but only for enacting modifications to an existing agreement and where the latter provides for them to be adopted by a simplified procedure or by a body set up by the agreement. The Council may attach specific conditions to such authorization: Art 218(7).

[160] All of these acts take the form of decs or sometimes regs.

[161] Art 218(8) TFEU.

[162] These committees, including the Article 207 Committee, are purely advisory and are limited to giving assistance in the negotiation of agreements: Case C–61/94 *Commission v Germany (International Dairy Arrangement)* [1996] ECR I–3989, [14].

arrangements for the negotiation and conclusion of agreements. The Commission is to be 'fully associated with the negotiations'.

Although Article 218 TFEU refers to 'agreements', the ECJ ruled in *Opinion 1/75* that this notion is to be construed broadly as referring to 'any undertaking entered into by entities subject to international law which has binding force, whatever its formal designation'.[163] The intention of the parties to give the document binding force will be decisive. In *France v Commission*, concerning the EU–US antitrust agreement on the application of competition laws, the Court made clear that the Commission could not adopt a binding document of this kind together with another international actor, outside the procedure provided for in Article 218 TFEU.[164] However, where it is clear throughout negotiations that the intention of the parties is not to enter into legally binding commitments, the adoption by the Commission together with an international partner of 'Guidelines' is not precluded by Article 218.[165]

The Council may, on a proposal from the Commission or the High Representative, adopt a decision suspending an international agreement concluded by the EU, or establishing the positions to be adopted on the EU's behalf in a body set up by an agreement, when that body may adopt acts having legal effects.[166] Although not explicitly mentioned, a similar procedure applies in relation to the termination of an international agreement. The provisions governing suspension and termination are invoked only in exceptional circumstances, and they tend to serve as instruments of political pressure on third countries.[167]

(B) MIXED AGREEMENTS

Mixed agreements are a very common EU phenomenon, and will remain an integral part of the legal landscape so long as both the EU and the Member States retain treaty-making capacity.[168] Mixed agreements are agreements to which both the EU and the Member States are contracting parties on the basis that their joint participation is required, because not all matters covered by the agreement fall exclusively within EU competence or exclusively within Member State competence. A mixed agreement will also be used in a case where competence over the subject matter of the agreement is shared between the Member States and the EU. Mixed agreements form an integral part of EU law and are binding on both the EU institutions and the Member States.

Discussions of mixity, as with many aspects of EU external relations, are often intricate and confusing. Rosas proposed a detailed typology of mixed agreements on the basis of the nature of the competence involved.[169] He distinguishes between parallel and shared competence. On his account, parallel competence implies that the EU's participation in an agreement is just like that of

[163] *Opinion 1/75* (n 76) 1359–1360; Case C–327/91 *France v Commission* (n 24). It may be argued that the ECJ's definition of an agreement in *Opinion 1/75* related only to an 'envisaged agreement' for the purposes of its advisory jurisdiction under Art 218(11), but the Court in Case C–327/91 clearly ruled that the term agreement in Art 218 was intended to indicate 'any undertaking entered into by entities subject to international law which has binding force, whatever its formal designation'.

[164] Case C–327/91 *France v Commission* (n 24); Case C–189/97 *European Parliament v Council (EC/Mauritania fisheries agreement)* [1999] ECR I–4741.

[165] Case C–233/02 *French Republic v Commission (Guidelines on regulatory cooperation and transparency concluded with the USA)* [2004] ECR I–2759.

[166] Art 218(9) TFEU.

[167] M Maresceau, 'Unilateral Suspension and Termination of Bilateral Agreements Concluded by the EC' in M Bulterman, L Hancher, A McDonnell, and H Sevenster (eds), *Views of European Law from the Mountain. Liber Amicorum Piet-Jan Slot* (Kluwer Law International, 2009) 455–466.

[168] The literature on mixed agreements is vast. See, for instance, D O'Keeffe and HG Schermers (eds), *Mixed Agreements* (Kluwer, 1983); J Heliskoski, *Mixed Agreements as a Technique for Organizing the International Relations of the European Community and its Member States* (Kluwer, 2001).

[169] A Rosas, 'The European Union and Mixed Agreements' in Dashwood and Hillion (n 32).

any other contracting party and has no direct effect on the rights and obligations of Member States. Shared competence on the other hand entails some division of rights and obligations contained in the agreement.[170] Rosas subdivides shared competence into (i) coexistent competence, where an agreement contains some provisions falling under the exclusive competence of either the EU or the Member States, so that the agreement can be divided into separate parts; and (ii) concurrent competence, where the agreement in question forms a whole which cannot be divided into separate parts.[171] Rosas also proposes a distinction between obligatory and optional mixity, although the distinction is difficult to apply in practice. Indeed, it has been suggested that any attempt to classify mixed agreements risks over-simplifying the phenomenon, since the practice is extremely complicated and involves the interaction of a range of external EU powers and a variety of international agreements.[172]

The ECJ has not generally attempted any detailed delineation of areas of competence in the context of mixed agreements. Once exclusive competence is ruled out, the Court generally turns its attention to how best to organize the joint participation of the EU and the Member States. One additional reason for its unwillingness to address the exact scope of the respective competences of states and the EU has been the dynamic and evolving nature of EU competence.[173] In its ruling on the compatibility with the Euratom Treaty of Member State participation in the Convention on the Physical Protection of Nuclear Materials, the ECJ held that the division of competence with regard to implementation of the agreement was to be resolved on the basis of the same principles that govern the division of powers concerning the negotiation and conclusion of agreements.[174] The Court emphasized that the duty of cooperation must be observed in all in three stages of external action: in the negotiation, conclusion, and execution of mixed agreements.[175] Responsibility for the performance of mixed agreements also follows the respective competences.[176] According to the ECJ, Member States are subject to special duties of action and abstention as soon as a 'concerted common strategy' exists at the level of the EU.[177] The Court has also ruled that whatever difficulties there may be in managing mixed agreements, these difficulties do not provide a reason for altering the classification of competence, or for arguing that it should be exclusive.[178]

As far as negotiation is concerned, the division of competence under a mixed agreement does not, generally, influence participation in negotiations. While the practice is decided on a case-by-case basis, it is generally accepted that the Commission may act as a sole negotiator for the whole agreement according to the mandate given to it by the Council, as occurred in the case of the WTO Agreement. In general, the 'common statement' is agreed by consensus and the Commission presents it when competence is exclusive, whereas the Presidency presents the agreed position for matters falling under shared competence. This background practice suggests that the new reference made in Article 218(3) TFEU to the designation of an EU negotiator 'depending on the subject of the agreement envisaged' would make it difficult for the Commission to act as a sole negotiator when an agreement partly concerns the CFSP, which is not a domain of EU exclusive competence.

[170] On the range of ways which the EU has developed to manage shared competence see Cremona (n 38).

[171] For a similar argument see the Opinion of AG Kokott, 26 Mar 2009, in Case C–13/07 *Commission v Council (Accession of Vietnam to the WTO)* [67]–[84]. The case was withdrawn by the Commission before the ECJ ruled. See (n 88).

[178] *Opinion 1/94* (n 41) [107]; *Opinion 2/00* (n 22) [41]; *Opinion 1/08* (n 88) [127].

The phenomenon of mixity has attracted a range of views, with some regarding it as a necessary evil which is rendered all the more problematic by the enlargement of EU membership, while others have praised it as a 'near-unique contribution to true federalism'.[179]

(c) THE ROLE OF THE EUROPEAN PARLIAMENT

Although the power of the European Parliament has been consistently growing in external relations, it has done so in small steps.[180] The latest step taken by the Lisbon Treaty however is particularly significant. The Parliament is called upon to act mainly at the stage of conclusion of agreements, which considerably reduces its opportunity for influencing their content.[181] However, a range of informal mechanisms have been created to compensate for this, in order to enable the Parliament to be 'regularly and fully informed', including through the participation of MEPs as observers during negotiations, and so that its views can be taken into account.[182]

The basic position today is that the Council adopts the decision concluding an international agreement after obtaining the Parliament's consent. Under the terms of Article 218(6) such consent is required in five cases: (i) Association Agreements referred to in Article 217 TFEU, (ii) agreements on EU accession to the ECHR, (iii) other agreements which establish a specific institutional framework by organizing cooperation procedures, (iv) agreements having important budgetary implications for the Union,[183] and finally (v) agreements covering fields of EU competence to which either the ordinary legislative procedure applies or the special legislative procedure where consent by the European Parliament is required. This last category largely reconciles the roles of the European Parliament in the internal decision-making process and in the field of external relations. The most significant impact of this change is that no international agreement in the field of the CCP may be concluded without the Parliament's consent, whereas in the past even simple consultation was not required.[184] In order to avoid excessive delay in negotiations and conclusion, the Parliament and the Council can agree upon a time limit within which the Parliament is to deliver its opinion in an urgent situation.

The cases where mere consultation of the Parliament applies are now the exception,[185] and in such cases the Council may impose on the Parliament a deadline for communicating its opinion. There is no formal requirement to consult the Parliament where an agreement exclusively concerns the CFSP.

[181] See Eeckhout (n 77) 183 for a democracy-based critique of the omission of the European Parliament from the conclusion of international agreements, especially those negotiated under the Second and Third Pillars.

[182] This was done previously under the so-called Luns-Westerterp procedure and at present under the Framework Agreement on relations between the European Parliament and the Commission. For controversy over the latter see (n 95).

[183] Note that the Council and the European Parliament may, in an urgent situation, agree upon a time limit for Parliament's assent. This category of agreements has given rise to problems of interpretation, particularly concerning which budgetary implications can be said to be 'important'. See Case C–189/97 *European Parliament v Council* (n 164) for discussion as to what the appropriate point of comparison should be for weighing the amount of expenditure under a given agreement.

[185] See, eg, Art 64(3) TFEU on the adoption of certain restrictive measures in the field of liberalization of capital movements to or from third countries, where mere consultation is required.

(D) THE MEMBER STATES' DUTY OF SINCERE COOPERATION

Although there is no explicit Treaty provision which specifies that the Member States must not enter into negotiations and conclude international agreements which would deviate from the position taken by the EU, it seems that the supremacy of EU law, together with Article 4(3) TEU, effectively requires states to abstain from any such action or from enacting any rules which would conflict with EU norms.

We have seen that Article 4(3) TEU requires Member States to facilitate the achievement of the Union's tasks and to abstain from any measure which could jeopardize the attainment of the Treaty objectives. This 'duty of sincere cooperation' applies whether the EU's competence is exclusive or shared. The implications of this provision have been held to mean that when the EU institutions envisage taking EU action, and once they adopt a decision authorizing the Commission to negotiate a multilateral agreement, the Member States are under a duty to cooperate closely with the EU institutions in order to 'facilitate the achievement of the EU's tasks and to ensure the coherence and consistency of the action and its international representation'.[186] If on the other hand they negotiate, conclude, ratify, or implement bilateral or multilateral treaties concerned with the same issues without cooperating or consulting with the Commission they will be in breach of EU law.

The ECJ recently clarified the obligations arising for the Member States from the duty of sincere cooperation for the implementation of an international agreement. The Court ruled that Greece, by submitting to the International Maritime Organization (IMO) a proposal for monitoring the compliance of ships and port facilities with certain requirements of the International Convention for the Safety of Life at Sea, had failed to fulfil its obligations under the duty of sincere cooperation.[187] As a result, the mere initiation of a procedure that might have led the IMO to adopt a new rule which could affect EU rules was sufficient for the ECJ to conclude that the proposal submitted by Greece amounted to an impermissible exercise by the Member State of an exclusive EU competence. The duty of sincere cooperation is particularly important where, as in this case, the EU is not a party to an international agreement and the Member States act jointly in the EU's interests.[188] However, even in a field of shared competences such as the negotiation of a mixed environmental agreement, the ECJ ruled that Member States are under duties of action and abstention once the Commission has submitted proposals to the Council which, although not yet adopted by the Council, represent a point of departure for the EU's 'concerted common strategy'.[189]

(E) COOPERATION WITHIN INTERNATIONAL ORGANIZATIONS

The TFEU expressly provides for the establishment of relations with other international entities. Article 220 TFEU refers to the maintenance of all appropriate relations with the organs of the UN and its specialized agencies,[190] the Council of Europe, the OECD, the OSCE, and more generally with 'all international organizations'. The maintenance of such relations is the task of the High Representative for CFSP matters[191] and of the Commission in other cases.

[186] Case C–266/03 *Commission v Luxembourg (Inland Waterways Agreement)* [2005] ECR I–4805; Case C–433/03 *Commission v Germany (Inland Waterways Agreement)* [2005] ECR I–6985.

[187] Case C–45/07 *Commission v Greece* [2009] ECR I–701.

[188] See also *Opinion 2/91* (n 45) [119].

[189] Case C–246/07 *Commission v Sweden* (n 177) [91].

[190] On the complexities of EU representation at the UN see A Degrand Guillaud, 'Actors and Mechanisms of EU Coordination at the UN' (2009) 14 EFAR 405 and 'Characteristics of and Recommendations for EU Coordination at the UN' (2009) 14 EFAR 607. The EU's recent attempt to gain speaking rights at the UN General Assembly was initially opposed by other regional groupings but was subsequently approved on 3 May 2011.

[191] Art 27(2) TEU.

Other Treaty provisions mention relations between the EU and 'competent' international organizations in the context of the EMU, education and sport, culture, public health, the environment, and development cooperation. Article 138 TFEU makes specific provision for the Council to decide on the position of the Union and its representation, at the international level, in relation to issues concerning economic and monetary union. In the context of the CFSP, Article 34 TEU provides that the 'Member States shall coordinate their action in international organizations and at international conferences'. In *Opinion 1/76*, the ECJ ruled that the powers of the EU to enter international agreements include a power, within the scope of the then Community's competence, to enter agreements establishing international organizations.[192] This was further implicitly confirmed by the ECJ's *Opinion 1/94* where participation in the Agreements establishing the World Trade Organization was approved. EU participation can take either the form of full membership, as in the WTO example,[193] or the form of observer status, as in the case of the ILO. In many instances, as in the WTO case, the EU participates in the organization alongside the Member States. If membership of the organization in question is open only to states, then the Member States will adopt a common position on the issue for which the EU is competent, and they must act jointly in the Union's interest in accordance with their general duty of cooperation.[194]

7 THE EU AND INTERNATIONAL LAW

As an entity with international legal personality, the EU is the subject of rights and obligations arising under international agreements and under international law. This applies to all areas in which the EU has competence including the CFSP, despite the limited jurisdiction of the ECJ over this field.

(A) INTERNATIONAL AGREEMENTS CONCLUDED BY THE EU ARE BINDING UPON IT AND ARE PART OF EU LAW

Article 216(2) TFEU applies the international law principle of *pacta sunt servanda* within EU law by providing that agreements concluded by the Union are binding on the institutions of the Union and on its Member States.[195] The Court has consistently held since the *Haegeman* ruling that once an agreement enters into force, its provisions form an 'integral part' of Community law, now EU law.[196] The ECJ has also ruled that Member States are in violation of their obligations under EU law where they fail to adopt the measures necessary to implement an international agreement concluded by the EU.[197] In other words, agreements entered into by the EU bind the Member States by virtue of their duties under EU law and not international law.

[192] *Opinion 1/76* (n 41); S Marchisio, 'EU's Membership in International Organisations' in Cannizzaro (n 130); R Frid, *The Relations between the EC and International Organizations—Legal Theory and Practice* (Kluwer, 1995).

[193] Other examples include the Food and Agriculture Organization and the European Bank for Reconstruction and Development. In some cases the EU has joined pre-existing international organizations, whereas in other cases it has participated in the agreement creating a new organization.

[194] *Opinion 2/91* (n 45) [1]–[5].

[196] Case 181/73 *Haegeman* [1974] ECR 449, [5]; *Opinion 1/91 (EEA Agreement I)* [1991] ECR 6079, [37].

[197] See, eg, Case C–239/03 *Commission v France* (*Étang de Berre*) [2004] ECR I–9325. Similar issues were raised by the proposal for an international agreement creating a European and EU patents court (see *Opinion 1/09* given by the ECJ, 8 Mar 2011, finding the envisaged agreement to be incompatible with the EU Treaties), and by the proposed accession of the EU to the ECHR and its judicial system as noted by the ECJ in its Discussion Document on certain aspects of the accession of the European Union to the Convention for the Protection of Human Rights and Fundamental Freedoms, 5 May 2010.

(B) THE EU LEGAL SYSTEM AS AN AUTONOMOUS LEGAL ORDER

When the EU has become a party to an organization or an agreement setting up bodies the powers of which may conflict with those of the EU institutions, the Court has been particularly insistent on defending the autonomy of the EU legal order. In *Opinion 1/76*, the ECJ ruled out the possibility of establishing a special Tribunal composed of six judges from the ECJ and one judge from Switzerland, on the ground that ECJ judges might face a conflict of jurisdiction or allegiance to two different bodies.[198]

A similar ruling was given in relation to provisions of the proposed EEA Agreement in *Opinion 1/91*.[199] The proposed conferral of jurisdiction upon a new EEA Court which would have been composed of three judges from the ECJ and three from EFTA states was held to be incompatible with Community law. So was the fact that the agreement had the effect of introducing into the Community legal order a large body of legal rules which would be juxtaposed to a corpus of identically worded Community rules, with all the problems of interpretation and consistency that would follow. This was said to conflict with what was then Article 220 EC[200] and, more generally, with the very foundations of the Community.[201] A similar approach can be seen in *Opinion 1/00* on the agreement establishing a European Common Aviation Area where, although ultimately it upheld the compatibility of the agreement with the EC Treaty, the Court underscored the importance of 'the preservation of the autonomy' of the EU legal order.[202] In *Opinion 1/09* on the creation of a new European and EU patents court, the ECJ ruled that the envisaged agreement establishing the new international court, which would have given exclusive jurisdiction to hear actions brought by individuals in the field of the EU patent to the new court, would deprive the ECJ of its power to give preliminary rulings to national courts on questions of interpretation arising from such disputes, and consequently was incompatible with the EU Treaties.[203]

The exclusive jurisdiction of the ECJ is confirmed by Article 344 TFEU, in accordance with which the Member States undertake not to submit a dispute concerning the interpretation or application of the Treaties to any method of settlement other than those provided for therein. The breach of this obligation formed the basis of the *Sellafield/MOX Plant* case brought by the Commission against Ireland.

Case C–459/03 **Commission v Ireland**
[2006] ECR I–4635

[Note Lisbon Treaty renumbering: Arts 226 and 292 EC are now Arts 258 and 344 TFEU]

Ireland instituted proceedings against the UK before the international arbitral tribunal provided for under the United Nations Convention on the Law of the Sea (UNCLOS) in relation to the failure to protect the marine environment with regard to the operation of the MOX plant situated on the Irish Sea. The Commission as a result brought proceedings against Ireland under Article 226 EC for violation of the obligation in Article 292 EC. The ECJ ruled that the breach related to an area of shared external

[198] *Opinion 1/76* (n 41).
[199] *Opinion 1/91* (n 196).
[200] This Art is replaced, in substance, by Art 19 TEU. Art 19 sets out the basic task and role of the ECJ by providing that it 'shall ensure that in the interpretation and application of the Treaties the law is observed'.
[201] Following renegotiation of the agreement, and the replacement of the earlier proposed EEA Court with an EFTA Court consisting only of judges from the EFTA countries, with more limited jurisdiction, the ECJ upheld the compatibility of the revised Agreeement with the EC Treaty: *Opinion 1/92 (EEA Agreement II)* [1992] ECR I–2821.
[202] *Opinion 1/00 on the establishment of a European Common Aviation Area* [2002] ECR I–3493.
[203] *Opinion 1/09*, 8 Mar 2011.

competence, and that the matters covered by the relevant UNCLOS provisions were to a large extent already regulated by Community measures. It ruled further that UNCLOS had been concluded by the Community, and continued:

THE ECJ

123. The Court has already pointed out that an international agreement cannot affect the allocation of responsibilities defined in the Treaties and, consequently, the autonomy of the Community legal system, compliance with which the Court ensures under Article 220 EC. That exclusive jurisdiction of the Court is confirmed by Article 292 EC, by which Member States undertake not to submit a dispute concerning the interpretation or application of the EC Treaty to any method of settlement other than those provided for therein (see, to that effect, Opinion 1/91 . . . and Opinion 1/00 . . .).

124. It should be stated at the outset that the Convention precisely makes it possible to avoid such a breach of the Court's exclusive jurisdiction in such a way as to preserve the autonomy of the Community legal system.

125. It follows from Article 282 of the Convention that, as it provides for procedures resulting in binding decisions in respect of the resolution of disputes between Member States, the system for the resolution of disputes set out in the EC Treaty must in principle take precedence over that contained in Part XV of the Convention.

126. It has been established that the provisions of the Convention in issue in the dispute concerning the MOX plant come within the scope of Community competence which the Community exercised by acceding to the Convention, with the result that those provisions form an integral part of the Community legal order.

127. Consequently, the dispute in this case is indeed a dispute concerning the interpretation or application of the EC Treaty, within the terms of Article 292 EC.

128. Furthermore, as it is between two Member States in regard to an alleged failure to comply with Community-law obligations resulting from those provisions of the Convention, this dispute is clearly covered by one of the methods of dispute settlement established by the EC Treaty within the terms of Article 292 EC, namely the procedure set out in Article 227 EC.

Ultimately, the ECJ ruled that Ireland had violated its obligation to respect the exclusive nature of the ECJ's jurisdiction to resolve disputes concerning the interpretation and application of provisions of EU law, and that such a violation involved a manifest risk of adverse effects on the jurisdictional order laid down in Treaties and on the autonomy of the EU (formerly the Community) legal system.

(c) THE EFFECT OF OTHER RULES OF INTERNATIONAL LAW, AND OF INTERNATIONAL AGREEMENTS TO WHICH THE MEMBER STATES ARE PARTY

Article 216(2) TFEU mentions only agreements which have been concluded by the EU, and makes no reference to other rules of international law. However, the ECJ has acknowledged the binding nature of such other rules. Further, as we have seen above, since the enactment of the Lisbon Treaty, Article 3(5) TEU declares that the EU shall contribute to 'the strict observance and the development of international law, including respect for the principles of the United Nations Charter'. However, the cases in which the ECJ has invoked or applied rules or principles of international law other than international agreements to which it is party remain few in number.

Two decades ago in *Poulsen* the ECJ ruled that the EU must respect international law in the exercise of its powers,[204] and specifically that it was required to comply with the rules of customary international law when adopting a regulation suspending trade concessions resulting from an agreement concluded with a non-member country. Shortly afterwards in *Racke* the Court declared that the rules of customary international law concerning the termination and the suspension of treaty relations by reason of fundamental change of circumstances (*rebus sic stantibus*) are binding on the EU institutions and form part of the EU legal order.[205] In a ruling concerning the International Dairy Agreement, the Court drew on the general rule of international law requiring the parties to any agreement to show good faith in its performance.[206] More recently in the *Firma Brita* case, in which an apparently technical customs dispute concealed the complex politics of the Middle East, the ECJ ruled that the EU must respect the general principle of international law, also enshrined in Article 34 of the Vienna Convention on the Law of Treaties, concerning the relative effect of treaties, according to which treaties do not impose any obligations, or confer any rights, on third states (ie, non-parties) without their consent.[207] Applying this principle to the facts of *Brita*, the ECJ ruled that if the EC–Israel Association Agreement were interpreted to mean that the Israeli customs authorities enjoyed competence in respect of products originating in the West Bank, this would be tantamount to imposing on the Palestinian customs authorities an obligation to refrain from exercising the competence expressly conferred upon them under the terms of the EC–Palestinian Liberation Organization Association Agreement. No doubt reflecting the highly contested political dispute over Israeli settlements within the Occupied Territories underlying the facts of the case, the judgment has been criticized for its 'ill-founded, incomplete, one-dimensional and selective' use of international law,[208] and for raising as many questions as it answered.[209]

In another important and controversial case concerning international law, the ECJ in *Kadi* ruled that the EU's obligation to respect international law in the exercise of its powers and the special importance attached to resolutions of the UN Security Council under Chapter VII of the UN Charter would not prevent the Court from annulling EU measures implementing a Security Council resolution where those measures violated fundamental rights protected within EU law.[210] According to the ruling of the Court, 'the obligations imposed by an international agreement', even by the UN Charter, 'cannot have the effect of prejudicing the constitutional principles of the EC Treaty'.[211] The Court further ruled that even if the UN Charter were to have primacy over secondary EU acts, it would not have primacy over the EU Treaties or the general principles of EU law. [212] In one of its most dramatic rulings to date on the autonomy of the EU legal system and its separateness from the international legal order, the ECJ declared that 'an international agreement cannot affect the allocation of powers fixed by the Treaties or, consequently, the autonomy of the Community legal system'.[213] The *Kadi* case is discussed further in Chapter 11.

As regards international agreements to which the EU is not a party, but which are binding on the Member States, Article 351 TFEU specifies that, in the case of agreements concluded *before* 1 January 1958 (or, for acceding states, before the date of their accession) between one or more Member States on

[213] Ibid [282].

the one hand and one or more third countries on the other, the rights and obligations arising shall not be affected by the provisions of the TEU or the TFEU. The ECJ has clarified further the conditions for the application of Article 351 TFEU (ex Article 307 EC) in various cases. In *T. Port*, it ruled:

> Thus, for a Community provision to be deprived of effect as a result of an international agreement, two conditions must be fulfilled: the agreement must have been concluded before the entry into force of the Treaty and the third country concerned must derive from it rights which it can require the Member State concerned to respect.[214]

In the Bilateral Investment Treaties' (BITS) cases, the ECJ ruled that the purpose of Article 351 TFEU was to make it clear, in accordance with the principles of international law, that application of the EU Treaties does not affect the duty of the Member State concerned to respect the rights of third countries under a prior agreement and to perform its obligations.[215] The EU itself, however, is not bound by such previous agreements. Article 351 contains only a duty on the part of the EU institutions not to impede the performance of Member States' obligations stemming from such a prior agreement which confers rights on third countries.[216]

Further, to the extent that such agreements are not compatible with the EU Treaties, the ECJ has ruled that the Member States concerned are obliged to take all appropriate steps to eliminate the incompatibilities established. The case below illustrates that the fact that a Member State encounters difficulties in bringing its obligations to a third state in line with its obligations under EU law does not release the state from its obligation to adjust and, where necessary, to denounce the conflicting agreement.[217]

Case C–84/98 **Commission v Portugal**
[2000] ECR I–5215

[Note Lisbon Treaty renumbering: Art 234 EEC is now Art 351 TFEU]

Following its accession to the EC in 1986 Portugal was required to adjust its prior agreement with the Federal Republic of Yugoslavia (FRY) so as to respect Regulation 4055/86 on the freedom of maritime transport services between Member States and third countries, but failed to do so. The Commission brought infringement proceedings against Portugal before the ECJ.

THE ECJ

39. In this case, the Portuguese Government has not succeeded in adjusting the contested agreement by recourse to diplomatic means within the time-limit laid down by Regulation No 4055/86.

40. It must be borne in mind that the Court has already held that, in such circumstances, in so far as denunciation of such an agreement is possible under international law, it is incumbent on the Member State concerned to denounce it (see, to that effect . . . *Commission* v *Belgium* [1999] . . .).

41. However, the Portuguese Government denies any failure to fulfil its obligations . . .

. . .

[214] Cases C–364–365/95 *T. Port GmbH & Co v Hauptzollamt Hamburg-Jonas* [1998] ECR I–1023, [61].
[215] Case 205/06 [33]; Case C–249/06 [34]; Case C–118/07 [34] (n 69).
[216] Case 812/79 *Attorney General v Juan C Burgoa* [1980] ECR 2787, [9].
[217] See also Case C–170/98 *Commission v Belgium* [1999] ECR I–5493; Case C–62/98 *Commission v Portugal* [2000] ECR I–5171; Case C–84/98 *Commission v Portugal* [2000] ECR I–5215.

49. Finally, the Portuguese Government contends, in essence, that, with regard to pre-Community conventions concluded between a Member State and a third country, although Article 234 of the Treaty imposes the obligation to take all appropriate steps to eliminate any incompatibility between a rule of the convention and a Community rule, that provision is not indifferent to the legal consequences and political costs flowing from that obligation. Cases where a convention must be denounced under Article 234 of the Treaty arise only exceptionally and in extreme circumstances. Such denunciation would involve a disproportionate disregard of the interests linked to its foreign policy as compared with the Community interest. Moreover, the Commission should have referred to that provision in the statement of the reasons for a request for a pre-Community convention to be adjusted or denounced…

[*The ECJ went on to conclude that it was not impossible, in the case at hand, for Portugal to respect the rights of the FRY since the agreement itself enabled the parties to denounce it.*]

58. Furthermore, although, in the context of Article 234 of the Treaty, the Member States have a choice as to the appropriate steps to be taken, they are nevertheless under an obligation to eliminate any incompatibilities existing between a pre-Community convention and the EC Treaty. If a Member State encounters difficulties which make adjustment of an agreement impossible, an obligation to denounce that agreement cannot therefore be excluded.

59. As regards the argument that such denunciation would involve a disproportionate disregard of foreign-policy interests of the Portuguese Republic as compared with the Community interest, it must be pointed out that the balance between the foreign-policy interests of a Member State and the Community interest is already incorporated in Article 234 of the Treaty, in that it allows a Member State not to apply a Community provision in order to respect the rights of third countries deriving from a prior agreement and to perform its obligations thereunder. That article also allows them to choose the appropriate means of rendering the agreement concerned compatible with Community law.

…

61. In those circumstances, it must be held that, by failing either to denounce or adjust the contested agreement so as to provide for fair, free and non-discriminatory access by all Community nationals to the cargo-shares due to the Portuguese Republic, as provided for in Council Regulation (EEC) No 4055/86, the Portuguese Republic has failed to fulfil its obligations under Articles 3 and 4(1) of that regulation.

In the BITS cases,[218] the ECJ defined the obligations of Member States under Article 351 TFEU very broadly. The agreements, which had been concluded by Austria, Sweden, and Finland with a range of third countries, contained provisions guaranteeing the free transfer, without undue delay and in freely convertible currency, of payments connected with an investment. Article 63 TFEU prohibits all restrictions on the movement of capital and on payments between the Member States, and between Member States and third countries, but Articles 64(2), 66, and 75 TFEU empower the EU to adopt measures to restrict such movements which involve direct investment. The BITs in question in these cases did not contain any provision allowing for the unilateral suspension of their implementation in the event of the EU exercising that competence. The ECJ rejected the argument of the states that they could, in the event that the Council decided to exercise its restrictive power under the EU Treaty, negotiate with their third-country partners with a view to suspending, on a temporary basis, the implementation of their bilateral agreements. The Court ruled that the time required for such international negotiations would be inherently incompatible with the practical effectiveness of the measures, and that the possibility of relying on international law mechanisms, such as suspension or denunciation of the agreements, would be too uncertain to guarantee that the Council's measures could be effectively applied. The mere risk of difficulties in the implementation of potential future Council measures was sufficient for it to find an infringement by the three Member States concerned.

[218] (N 215).

In the case of the GATT 1947, the ECJ ruled in the *International Fruit Company* case that the EC was bound by its provisions, notwithstanding the fact that it was not a party to it. The Court declared that the EC had assumed the functions inherent in the tariff and trade policy in their entirety on the expiry of the transitional period, and since this is an area governed by the GATT, the provisions of that agreement bound the Community.[219]

8 THE LEGAL EFFECT OF INTERNATIONAL AGREEMENTS IN THE EU LEGAL ORDER

One of the major legal topics within EU external relations has been the question of what effect international agreements have within the EU legal order. We have seen above that international agreements entered into by the EU are deemed to be an integral part of the EU legal order[220] and are binding upon the EU in accordance with Article 216(2) TFEU. We have also seen in Chapter 7 that most forms of binding EU law have been held by the Court to be in principle capable of having direct effect.

Arguments may be made both for and against the direct legal enforceability of international agreements by private parties before domestic courts. On the one hand, as treaties concluded with other states or international organizations, they can be viewed as traditional international agreements binding only the states or organizations which signed them, having no automatic 'self-executing' quality and conferring neither rights nor obligations on individuals. On the other hand, as agreements entered into by the EU, they can be viewed as sharing some of the key characteristics of EU law, and in particular could be capable of direct effect, of being invoked and enforced by individuals whenever sufficiently precise and unconditional. Opting broadly for the approach which would integrate agreements made by the EU into the law of the Member States, the Court held that international agreements can, *under certain circumstances*, be directly effective.

We shall see, however, that in the field of international agreements a range of political and strategic considerations comes into play, and the question whether or not the provisions of a particular agreement can be judicially enforced at the suit of individual litigants is not determined solely by reference to the legal criteria first developed in *Van Gend en Loos*.

The issue which dominated this area of law for many years and has generated a vast academic literature, namely whether the provisions of the GATT 1947 and the successor World Trade Organization (WTO) agreements can have direct effect, was first raised several decades ago.

Cases 21–24/72 **International Fruit Company v Produktschap voor Groenten en Fruit** [1972] ECR 1219

A Dutch court made a preliminary reference to the ECJ, asking whether it had jurisdiction to rule on the validity of Community regulations in relation to a provision of international law and if so whether the regulations in question were contrary to the GATT.

[219] Cases 21–24/72 *International Fruit Company NV v Produktschap voor Groenten en Fruit* [1972] ECR 1219, [14]–[18]. Compare the ECJ ruling in Case C–188/07 *Commune de Mesquer* [2008] ECR I–4501, [85], to the effect that where neither the EU nor all the Member States were party to an international agreement, the EU would not be treated as having succeeded to the international obligations of Member States under the agreement.

[220] See (n 196).

THE ECJ

7. Before the incompatibility of a Community measure with a provision of international law can affect the validity of that measure, the Community must first of all be bound by that provision.

8. Before invalidity can be relied upon before a national court, that provision of international law must also be capable of conferring rights on citizens of the Community which they can invoke before the courts. . . .

18. It therefore appears that, in so far as under the EEC Treaty the Community has assumed the powers previously exercised by Member States in the area governed by the General Agreement, the provisions of that agreement have the effect of binding the Community.

19. It is also necessary to examine whether the provisions of the General Agreement confer rights on citizens of the Community on which they can rely before the courts in contesting the validity of a Community measure.

20. For this purpose, the spirit, the general scheme and the terms of the General Agreement must be considered.

The Court concluded from various aspects of the GATT, including the 'great flexibility of its provisions', the possibilities of derogation, and the power of unilateral withdrawal from its obligations, that it was 'not capable of conferring on citizens of the Community rights which they can invoke before the courts'. In other words, in terms of the criteria for direct effect laid down in earlier cases, the provisions of GATT were insufficiently precise and unconditional in the sense that they permitted the obligations contained therein to be modified, and they allowed for too great a degree of flexibility. The ECJ was unwilling to accord direct effect to international obligations of this nature, no doubt also because they were normally invoked to challenge the legality of EU legislation.[221]

In the later *Polydor* case, the Court was confronted with a provision of a free trade agreement between the EU and Portugal before Portugal had joined the EU.[222] Here the ECJ ruled that a provision of the trade agreement on free movement of goods, although it was worded identically to a provision of the then EEC Treaty (now Article 34 TFEU), was not to be interpreted in the same way and should not be given direct effect, since the agreement with Portugal did not have the same aim or purpose as the EEC Treaty of establishing a single market.

In *Kupferberg*,[223] however, the ECJ ruled that a different provision of the Portuguese free trade agreement did have direct effect, since the provision was unconditional, sufficiently precise, and its direct application was within the *purpose* of the agreement. It is notable that, unlike in the GATT cases, the effect of declaring the trade agreement in *Kupferberg* to be directly enforceable was to extend the scope of Community rules rather than to challenge or invalidate them. Similarly, the ECJ has held that provisions of the earlier Lomé Convention governing relations between the EU and the African, Caribbean, and Pacific states were directly effective where it was national rather than EU legislation which was being challenged for compatibility with the Convention.[224]

It should be noted that in paragraph 8 of the *International Fruit* judgment, the Court appeared to equate direct effect with the possibility of review of legality, and to rule out the latter unless the former were present. However, in the later *Nakajima* case, the Court distinguished between the 'direct effect' of the provisions of an international trade agreement in conferring individual rights on the one hand,

[221] This was confirmed in various cases after *Kupferberg* including Case 9/73 *Schlüter v Hauptzollamt Lörrach* [1973] ECR 1135; Case C–469/93 *Amministrazione delle Finanze dello Stato Chiquita Italia* [1995] ECR I–4533.

[222] Case 270/80 *Polydor Ltd and RSO Records Inc v Harlequin Record Shops Ltd. and Simons Records Ltd* [1982] ECR 329.

[223] Case 104/81 *Hauptzollamt Mainz v CA Kupferberg & Cie KG* [1982] ECR 3641; G Bebr, 'Agreements Concluded by the Community and their Possible Direct Effect: From International Fruit Company to Kupferberg' (1983) 20 CMLRev 35.

[224] Case C–469/93 (n 221).

and the possibility of those provisions being invoked before the ECJ to claim that EU legislation was incompatible with them on the other.[225] Subsequently in *Germany v Commission*, the ECJ made clear that a GATT provision could be invoked for the purposes of alleging the incompatibility of an EU measure in two circumstances only: (1) where the EU *intended* to implement that particular obligation, or (2) where the EU measure being challenged expressly referred to the particular GATT provision.[226]

In the recent *Ikea Wholesale* case, however, the ECJ appeared to narrow the *Nakajima* and *Germany v Commission* line of reasoning.[227] In earlier case law the ECJ had accepted that the EU intended, in adopting EU anti-dumping legislation, to satisfy the obligations arising from the GATT and the international Anti-Dumping Agreement. Applying the *Nakajima* principle, the validity of the specific Council regulation imposing definitive anti-dumping duties in the case should therefore be assessed not only in light of the general EU anti-dumping legislation, but also of the Anti-Dumping Agreement. In *Ikea Wholesale*, however, the ECJ treated the EU's initial intent to legislate in compliance with the Anti-Dumping Agreement as having been superseded by a later regulation which excluded repayment of duties, in spite of a subsequent report by the dispute settlement body (DSB) of the WTO finding the EU regulation in question to violate the Anti-Dumping Agreement.[228] This means that the political room for manoeuvre given to the EU institutions in implementing the WTO agreements has been expanded further, by enabling them to refuse to follow a DSB ruling on the compatibility of an EU measure with the Anti-Dumping Agreement, even where the EU had previously legislated with the intention of implementing that Agreement. In the later *Van Parys* case, too, the ECJ refused to apply the *Nakajima* principle to the situation of an EU regulation intended to implement a WTO DSB ruling, and would not assess the validity of the regulation in the light of the WTO rules in question, declaring that the EU had not in this situation intended to implement a 'particular obligation' in the context of the WTO.[229]

Despite this narrowing of the applicability of the *Nakajima* principle, the ECJ in other cases has applied the obligation of harmonious interpretation, the principle that EU law should be interpreted in the light of international law and of binding international agreements,[230] to provisions of the GATT and other WTO agreements such as that on Trade-Related Intellectual Property Rights (TRIPs).[231] This has the consequence of enhancing their effectiveness in certain circumstances, although not normally when they are being invoked to challenge EU measures.

It was argued, following the establishment of the WTO and the adoption of the new GATT in 1994, that in view of the more effective means of dispute settlement and enforcement under the new system, the assumptions on which the GATT 1947 had been held to lack direct effect no longer applied.[232]

[225] Case C–69/89 *Nakajima v Council* [1991] ECR 2069, [28]–[29]. For this purpose, according to the Court, the provisions need only be binding on the Community. However, in the case in question the ECJ ruled that the Community anti-dumping rules in issue did not conflict with the Anti-Dumping Code adopted under the GATT. See also Case 70/87 *Fediol v Commission* [1989] ECR 1781, and compare Case C–76/00 P *Petrotub SA and Republica SA v Council* [2003] ECR I–79.

[232] See, eg, Case T–228/95 R *S Lehrfreund Ltd v Council and Commission* [1996] ECR II–111, [28], and many cases which followed. There is also a vast and specialized academic literature on this subject.

Having avoided addressing the question of the legal effect and enforceability of the WTO agreements in a series of cases before the ECJ and the CFI (now the General Court), the ECJ finally confronted it directly.

Case C–149/96 **Portugal v Council**
[1999] ECR I–8395

Portugal brought an action for annulment of a 1996 Council Decision, arguing *inter alia* that the Decision was in breach of the WTO rules, including provisions of GATT 1994. Portugal argued that the case did not raise the problem of direct effect but rather 'the circumstances in which a Member State may rely on the WTO agreements before the Court for the purpose of reviewing the legality of a Council measure'. The ECJ began by indicating that it was only where an international agreement did not itself settle the question of the effects which its provisions would have within the legal orders of the contracting parties that it would fall to be decided by the courts.

THE ECJ

36. While it is true that the WTO agreements, as the Portuguese Government observes, differ significantly from the provisions of GATT 1947, in particular by reason of the strengthening of the system of safeguards and the mechanism for resolving disputes, the system resulting from those agreements nevertheless accords considerable importance to negotiation between the parties.

[*The ECJ examined the dispute-settlement rules of the WTO, and noted that although they provided for withdrawal of any measures found to be incompatible with WTO rules, they also allowed for compensation to be paid instead as a temporary measure where withdrawal would be impracticable. And if a member of the WTO failed to comply with a recommendation made by the dispute resolution body, that member would be requested to enter negotiations with the other party to the dispute 'with a view to finding mutually acceptable compensation'. The Court continued:*]

40. Consequently, to require the judicial organs to refrain from applying the rules of domestic law which are inconsistent with the WTO agreements would have the consequence of depriving the legislative or executive organs of the contracting parties of the possibility afforded by Article 22 of that memorandum of entering into negotiated arrangements even on a temporary basis.

41. It follows that the WTO agreements, interpreted in the light of their subject-matter and purpose, do not determine the appropriate legal means of ensuring that they are applied in good faith in the legal order of the contracting parties.

42. As regards, more particularly, the application of the WTO agreements in the Community legal order, it must be noted that, according to its preamble, the agreement establishing the WTO, including the annexes, is still founded, like GATT 1947, on the principle of negotiations with a view to 'entering into reciprocal and mutually advantageous arrangements and is thus distinguished, from the viewpoint of the Community, from the agreements concluded between the Community and non-member countries which introduce a certain asymmetry of obligations, or create special relations of integration with the Community, such as the agreement which the Court was required to interpret in *Kupferberg*.

43. It is common ground, moreover, that some of the contracting parties, which are among the most important commercial partners of the Community, have concluded from the subject-matter and purpose of the WTO agreements that they are not among the rules applicable by their judicial organs when reviewing the legality of their rules of domestic law.

44. Admittedly, the fact that the courts of one of the parties consider that some of the provisions of the agreement concluded by the Community are of direct application whereas the courts of the other party do not recognise such direct application is not in itself such as to constitute a lack of reciprocity in the implementation of the agreement (*Kupferberg*, paragraph 18).

> 45. However, the lack of reciprocity in that regard on the part of the Community's trading partners, in relation to the WTO agreements which are based on 'reciprocal and mutually advantageous arrangements and which must *ipso facto* be distinguished from agreements concluded by the Community, referred to in paragraph 42 of the present judgment, may lead to disuniform application of the WTO rules.
>
> 46. To accept that the role of ensuring that those rules comply with Community law devolves directly on the Community judicature would deprive the legislative or executive organs of the Community of the scope for manoeuvre enjoyed by their counterparts in the Community's trading partners.
>
> 47. It follows from all those considerations that, having regard to their nature and structure, the WTO agreements are not in principle among the rules in the light of which the Court is to review the legality of measures adopted by the Community institutions.

The ECJ went on to rule that the neither of the two conditions established in the *Nakajima* and *Germany* cases[233] was fulfilled, and so it could not review the legality of the Council decision in the light of the WTO rules. A number of factors were thus cited by the ECJ as arguments against the direct judicial enforceability of the WTO agreements.

First, the Agreements themselves do not specify precisely what their own methods of enforcement are to be, given that compensation is permitted in certain circumstances as an alternative to direct enforcement, and that there is scope for negotiation over the recommendations of the WTO dispute-settlement bodies.

Secondly, the ECJ took the view that the WTO was still founded on the principle of mutually advantageous negotiations, rather than on clearly and precisely binding legal commitments of the kind to be found in other international agreements entered into by the EU. Such other agreements, according to the Court, include those involving an 'asymmetry of obligations', where a guarantee of clear legal enforcement by the EU is given regardless of the lack of direct reciprocity in the relationship with the other party, for example the previous Lomé agreements with the ACP states, as well as those involving special relationships of integration with the Community such as the Portugal free trade agreement in *Kupferberg*, or the Europe Association Agreements.[234] In other words, lack of reciprocity in obligations and commitments under an international agreement has not in itself been sufficient reason for the ECJ to deny the direct applicability of such an agreement. However, the Court was unwilling to accord such legal effect within the EU legal order to the WTO agreements, given the particular kind of lack of reciprocity in *enforcement* which this would involve—ie, the EU Courts giving effect to the obligations contained in these broad-ranging multilateral trade agreements while the other trading partners could enjoy the full 'scope for manoeuvre' expressly permitted under them. The ECJ also commented that the lack of reciprocity in terms of willingness to recognize the direct applicability of the WTO agreements could lead to 'dis-uniform application of WTO rules'.

The Court's judgment generated another avalanche of academic commentary, much of which conceded that while the legal reasoning was less than convincing, the political motivation for the ruling is relatively obvious.[235] For some, this motivation was regrettable;[236] for others it was entirely pragmatic

[236] See, eg, G Zonnekeyn, 'The Status of WTO Law in the Community Legal Order: Some Comments in the Light of the Portuguese Textiles Case' (2000) 25 ELRev 293; S Griller, 'Judicial Enforceability of WTO Law in the EU' (2000) 3 JIEL 441. A longstanding advocate of the justiciability and direct effect of the GATT/WTO agreements has been E-U Petersmann, 'The Dispute Settlement System of the World Trade Organization and the Evolution of the GATT Dispute Settlement System since 1948' (1994) 31 CMLRev 1157 and 'Proposals for a New Constitution for the European Union: Building Blocks for a Constitutional Theory and Constitutional Law of the EU' (1995) 32 CMLRev 1123.

and even laudable, given criticisms of the WTO system for privileging trade liberalization over other social and environmental values.[237]

Since the *Portugal* ruling, the ECJ and the CFI have repeatedly resisted attempts to narrow the potential scope of the judgment. The ECJ ruled out any remaining uncertainty over the direct effect of provisions of the GATT,[238] and confirmed the application of the *Portugal* ruling in this respect to other WTO agreements such as TRIPs,[239] and on Technical Barriers to Trade (TBT).[240] The CFI also rejected a series of creative legal arguments including attempts to rely on Article 351 TFEU (ex Article 307 EC)[241] or on the principle of *pacta sunt servanda*,[242] or to invoke provisions of the WTO agreements in the context of actions for damages.[243] A number of unsuccessful attempts were also made to invoke the *Nakajima* and *Germany* doctrine,[244] in order to rely on the effects of the ruling of a dispute settlement panel within the WTO system,[245] specifically by arguing that the EU intended to implement or execute a particular WTO obligation following a dispute-settlement process.[246] Despite rejecting further attempts of this kind in *IKEA*, and *Biret*, the ECJ in *Biret* seemed to leave open the possibility that a provision of the WTO agreements, including as in this case the Agreement on Sanitary and Phytosanitary Standards (SPS), might be capable of being invoked to challenge the legality of an EU measure in the context of an action for damages, following the expiry of the reasonable period for compliance with its ruling set by a WTO DSB.[247] However the Court in *FIAMM* firmly closed the door on attempts to claim damages based on WTO violations, even those following a DSB ruling, and rejected the argument that a decision of the WTO Dispute Settlement Body, as compared with a provision of one of the WTO agreements, could be given 'direct effect'.[248]

In contrast to its reluctance to permit the judicial enforceability of the WTO agreements, the ECJ seemed initially to be more willing to recognize the enforceability of a number of other international agreements, even multilateral agreements, which did not involve special relations of integration with the EU. In the *Biotechnology* case, the ECJ declined to rule on whether the Rio Convention on Biological Diversity had created directly effective individual rights in the narrow sense, but confirmed its broader invocability by declaring that, unlike the WTO agreements, the Biodiversity Convention was 'not strictly based on reciprocal and mutually advantageous arrangements' and that courts could therefore review the Community's compliance with the obligations contained therein.[249] Moreover in the case of a regional

[249] Case C–377/98 *Netherlands v Council* [2001] ECR I–7079.

environmental agreement, the ECJ ruled that the Protocol for the protection of the Mediterranean Sea against pollution from land-based sources, and a later amended Protocol which had been signed by the EU and approximately twenty-one other states in the region was directly effective.[250]

The ECJ in *Racke* ruled that provisions of the EEC–Yugoslavia cooperation agreement of 1980 were directly effective, and could be invoked along with provisions of customary international law to challenge the legality of an EU regulation.[251] Similarly, in a series of cases involving various Europe Association Agreements, the ECJ declared their provisions on freedom of establishment and the free movement of workers to be directly effective.[252] These judgments follow the pattern of similar rulings in which the Court has recognized the direct effect of various provisions of association or cooperation agreements with third countries,[253] as well as the provisions of secondary decisions adopted by association councils or bodies set up under those agreements.[254] Agreements of this sort fall within the category of those setting up 'special relations of integration' with the EU of the kind referred to by the ECJ in paragraph 42 of its ruling in *Portugal* v *Council*.

While it may seem therefore that the ECJ has, with the exception of the WTO agreements, treated international agreements as being capable of having direct effect within the EU legal order, the Court in 2008 in the *Intertanko* case for the first time applied its restrictive reasoning from the GATT/WTO agreements case law to another kind of international agreement.[255] In *Intertanko* the ECJ refused to assess the validity of EU legislation in the light of the UN Convention on the Law of the Sea (UNCLOS) or the related MARPOL (marine pollution) Convention. A challenge had been brought to the validity of EU legislation on ship-source pollution, alleging that it violated the provisions of UNCLOS. Returning to its ruling in the *International Fruit Company* case, the ECJ declared that UNCLOS does not in principle grant independent rights and freedoms to individuals, and that the nature and broad logic of UNCLOS prevented the Court from being able to assess the validity of a Community measure in the light of that Convention.

It is notable that the Court relied on the argument that UNCLOS does not grant rights to individuals, rather than on the political flexiblity maintained by the Convention, in order to reach its conclusion that it could not review the legality of EU legislation in the light of UNCLOS. A further curious feature of the *Intertanko* ruling is that it ignored the distinction drawn earlier by the ECJ in *Nakajima* between the question of conferral of individual rights and the question whether provisions of an international agreement can be invoked to challenge the validity of EU law.[256] The *Intertanko* case also leaves open the question whether Member States, rather than individuals, may challenge the validity of Union legislation in light of UNCLOS.[257] More generally, the case raises the question whether the ECJ is beginning to change its approach on the invocability of international agreements. It may be that, rather than the GATT/WTO case law being the exception to a general rule of invocability of international agreements binding on the EU, that case law is now joined by *Intertanko* to create

the opposite presumption that international agreements will generally not be invocable to challenge EU acts unless they can satisfy a more demanding criterion of direct effect premised on the conferral of individual rights.

9 THE ROLE OF THE ECJ IN EU INTERNATIONAL RELATIONS

It is clear from the above discussion of the ECJ's approach to the effect of international agreements in the EU legal order, as well as its approach to the nature and breadth of EU competence and the scope of the CCP in the early years, that the Court has played an active and at times activist role in EU external relations. Below, an overview of the Court's role in the expanding field of international relations will be provided.

(A) PRE-EMPTIVE JURISDICTION: THE ADVISORY OPINION PROCEDURE OF ARTICLE 218(11)

The most distinctive source of ECJ jurisdiction in the field of international relations is the advisory opinion procedure provided for in Article 218(11) TFEU.[258] Article 218(11) stipulates:

> A Member State, the European Parliament, the Council or the Commission may obtain the opinion of the Court of Justice as to whether an agreement envisaged is compatible with the Treaties. Where the opinion of the Court is adverse, the agreement envisaged may not enter into force unless it is amended or the Treaties are revised.

The fact that either a Treaty amendment or a modification of the proposed agreement is required in the case of a negative opinion indicates that the Court's opinions are binding on the institutions. In its first Opinion, the ECJ outlined the rationale for this advisory procedure, and indicated that the scope of the questions which can form the subject of the request includes questions concerning the competence of the EU (then the EC) to enter the agreement:

Opinion 1/75 (Understanding on a Local Cost Standard)
[1975] ECR 1355

[Note Lisbon Treaty renumbering: Art 228 EC is now Art 218 TFEU]

THE ECJ

The compatibility of an agreement with the provisions of the Treaty must be assessed in the light of all the rules of the Treaty, that is to say, both those rules which determine the extent of the powers of the institutions of the Community and the substantive rules.

It is the purpose of the second subparagraph of Article 228 (1) to forestall complications which would result from legal disputes concerning the compatibility with the Treaty of international agreements

[258] And Arts 103–105 of European Atomic Energy Community Treaty. While there is no formal Opinion given by the AGs, they are heard in closed session. In *Opinion 1/09* (n 197), eg, the 8 AGs were heard. See S Adam, *La procédure d'avis devant la Cour de justice de l'Union européenne* (Bruylant, 2011).

> binding upon the Community. In fact, a possible decision of the Court to the effect that such an agreement is, either by reason of its content or of the procedure adopted for its conclusion, incompatible with the provisions of the Treaty could not fail to provoke, not only in a Community context, but also in that of international relations, serious difficulties and might give rise to adverse consequences for all interested parties, including third countries.
>
> For the purpose of avoiding such complications the Treaty had recourse to the exceptional procedure of a prior reference to the Court of Justice for the purpose of elucidating, before the conclusion of the agreement, whether the latter is compatible with the Treaty. This procedure must therefore be open for all questions capable of submission for judicial consideration, either by the Court of Justice or possibly by national courts, in so far as such questions give rise to doubt either as to the substantive or formal validity of the agreement with regard to the Treaty.

There is no time limit for the submission of a request under Article 218(11). Moreover, as we have seen above, the term 'agreement' has been interpreted broadly so as to include 'any undertaking entered into by entities subject to international law which has binding force, whatever its legal designation'.[259] On the other hand, the ECJ indicated in its *Opinion 2/94* on accession to the ECHR that the purpose of the agreement envisaged must be known before the Court is in a position to give an opinion.[260] The Court ruled that it was not necessary that the Council should already have adopted a decision to open negotiations, but the Court would need sufficient information concerning the specific arrangements envisaged, such as the proposed mechanism for judicial control under the ECHR. Since no such information was provided for the purpose of *Opinion 2/94*, the Court ruled that it could not give its opinion on that particular point.

Once the EU has expressed its intention to be bound by the agreement, namely once it has concluded the agreement, the ECJ is precluded from continuing with an Article 218(11) procedure.[261] Following its conclusion (even if this takes place after the request for an opinion has been filed) it is no longer an 'envisaged agreement' within the meaning of Article 218(11), the preventive function of the procedure cannot be achieved, and the ECJ's advisory jurisdiction is excluded.[262] This is clear from *Opinion 1/04* in which the ECJ refused to provide an opinion on the compatibility with the Treaty of the agreement envisaged with the US on the exchange of air Passenger Name Data (PNR).[263] The Council had rapidly concluded the agreement only a few weeks after Parliament's request was filed, thereby circumventing the possibility for an advisory opinion, and requiring Parliament to bring a subsequent action for annulment instead.

Once the legal basis on which the EU may act in concluding an agreement has been established, the ECJ has ruled that it is beyond its jurisdiction to engage in a more precise delineation of competence, particularly since the Article 218(11) procedure is not intended to resolve the difficulties associated with the implementation of an envisaged agreement entailing shared competence.[264]

Although the question is contested, the general exclusion of ECJ jurisdiction over the CFSP would seem to exclude the possibility of the Court providing an opinion on the compatibility of an envisaged agreement which relates exclusively or principally to this field.[265] However, the ECJ's jurisdiction under Article 40 TEU to ensure that the implementation neither of the CFSP nor of the rest of the EU's

policies adversely affects the powers and procedures of the other may provide a basis for an advisory opinion which focuses on questions of procedure and competence.

(B) JURISDICTION OF THE ECJ OVER INTERNATIONAL AGREEMENTS UNDER OTHER EU TREATY PROCEDURES

International agreements entered into by the EU may form the subject matter of a reference for a preliminary ruling on a point of interpretation or validity under Article 267 TFEU. In the first example of such a reference, the ECJ ruled in *Haegeman* that the EU's association agreement with Greece was an act of the institutions within the meaning of Article 267 TFEU.[266] Therefore, the provisions of the Agreement formed an integral part of EU law and the Court had jurisdiction to give preliminary rulings on their interpretation. In addition to agreements concluded by the EU, the Court has asserted its jurisdiction to interpret other acts such as decisions of bodies (like the Turkey–EU Association Council) set up under an agreement[267] as well as non-binding recommendations made under an international agreement.[268]

We will see in Chapter 12 that the ECJ may hear infringement proceedings brought against Member States under Article 258 for violation of their obligations under an international agreement which is binding on the EU. This is true also with regard to the WTO agreements even though, as we saw in *Portugal v Council*,[269] they are not among the rules which Member States may invoke to plead the illegality of EU acts.

International agreements and other provisions of international law have also been held to be amongst the rules of law to be taken into account in assessing the validity of EU measures. This was made clear in the *International Fruit Company* case, which has been discussed above in relation to the direct effect of international agreements.[270] By treating international agreements in the same way as internal EU acts for these purposes, the Court was able to broaden its jurisdiction and to hear actions for annulment and actions for damages brought on the basis of international agreements. However, we have seen above, both from the case law on the GATT/WTO agreements and the *Intertanko* case concerning UNCLOS, that the ECJ does not accept every international agreement as a legal source for assessing the validity of EU legislation.[271]

In addition to entertaining actions for the annulment of EU acts alleged to violate international agreements, the ECJ will also hear actions for annulment of an EU decision to conclude an international agreement. The grounds for annulment of a decision concluding an international agreement alleged to violate the Treaty are the same as for internal acts under Article 263(2) TFEU: lack of competence, infringement of an essential procedural requirement, infringement of the Treaties or of any rule of law relating to their application, or misuse of powers. Thus the alleged infringement may arise from the procedure followed for the conclusion of an international agreement,[272] or the substantive provisions of the agreement,[273] or the agreement may be *ultra vires* in the sense that the EU lacked competence to conclude it.[274] The obligation to state reasons means that a specific reference to the legal basis upon which the agreement is concluded is required.[275] EU legislative acts can also now be

[275] Case C–370/07 *Commission v Council* [2009] ECR I–8917, discussed at (n 23) [37]–[55]. This case concerned a decision establishing the position to be adopted by the EU within an organ created by an international agreement.

annulled by the ECJ for non-compliance with the Charter of Fundamental Rights, and more generally with the provisions of the TEU, including the general values, principles, and objectives laid down in Articles 2 and 3. These are all included within the term 'infringement of the Treaties or of any rule of law relating to its application' in Article 263(2) TFEU.

Since international agreements concluded by the EU are binding upon it, violation of their provisions may, at least in theory, form the basis for an action in damages under Article 340 TFEU. Thus far, however, no such action has been successful. Most of the cases brought have been based on an alleged violation of WTO law, and the ECJ has consistently held that the provisions of the WTO agreements do not form part of the rules by which the ECJ and General Court review the legality of EU acts, they do not enable individuals to rely on their provisions before the Courts, and their infringement will not give rise to non-contractual liability on the EU's part.[276]

(c) THE ECJ AND MIXED AGREEMENTS

Although the Court's first ruling on the interpretation of an international agreement in the *Haegeman* case concerned a mixed agreement, that fact seemed to play no part in the Court's assessment of its jurisdiction in that case.[277] The mixed nature of the agreement was invoked for the first time in *Demirel*, concerning the EC–Turkey Association Agreement:

> Since the agreement in question is an association agreement creating special, privileged links with a non-member country which must, at least to a certain extent, take part in the Community system, Article 238 must necessarily empower the Community to guarantee commitments towards non-member countries in all the fields covered by the Treaty. Since freedom of movement for workers is, by virtue of Article 48 et seq of the EEC Treaty, one of the fields covered by that Treaty, it follows that commitments regarding freedom of movement fall within the powers conferred on the Community by Article 238. Thus the question whether the Court has jurisdiction to rule on the interpretation of a provision in a mixed agreement containing a commitment which only the Member States could enter into in the sphere of their own powers does not arise.[278]

While this passage seems to suggest that the Court's jurisdiction over mixed agreements covers all issues, with the exception of matters falling within the exclusive competence of the Member States, the question of the ECJ's jurisdiction in cases where the relevant provisions of the international agreement at issue were concluded on the basis of the Member States' shared powers was not directly addressed in the case.[279]

The point arose however in *Hermès*, in which a preliminary reference was made to the ECJ on a question concerning the interpretation of Article 50 of the TRIPs Agreement, concerning the power of judicial authorities to order provisional measures to prevent certain infringements of intellectual property rights.[280] One of the objections raised was that the dispute concerned the application of national trade mark law. The Court replied that it did indeed have jurisdiction, since the provision in question applied also to Community trade marks:

[276] See (nn 219–248).

[277] P Koutrakos, 'The Interpretation of Mixed Agreements under the Preliminary Reference Procedure' (2002) 7 EFA 25.

[278] Case 12/86 *Demirel* (n 254).

[279] A Dashwood, 'Preliminary Rulings on the Interpretation of Mixed Agreements' in D O'Keeffe and A Bavaso (eds), *Judicial Review in European Union Law* (Kluwer, 2001) 171.

[280] Case C–53/96 *Hermès International* (n 231).

> [W]here a provision can apply both to situations falling within the scope of national law and to situations falling within the scope of Community law, it is clearly in the Community interest that, in order to forestall future differences of interpretation, that provision should be interpreted uniformly, whatever the circumstances in which it is to apply… In the present case, as has been pointed out in paragraph 28 above, Article 50 of the TRIPS Agreement applies to Community trade marks as well as to national trade marks.

Subsequently in *Parfums Christian Dior*, which again concerned Article 50 of the TRIPs Agreement, the ECJ extended further the scope of its jurisdiction to rule on Article 50:

Cases 300 and 392/98 **Parfums Christian Dior**
[2000] ECR I-11307

[Note Lisbon Treaty renumbering: Art 177 EEC is now Art 267 TFEU]

THE ECJ

36. In that regard, the Member States and the Community institutions have an obligation of close cooperation in fulfilling the commitments undertaken by them under joint competence when they concluded the WTO Agreement, including TRIPs (see, to that effect, Opinion 1/94…).

37. Since Article 50 of TRIPs constitutes a procedural provision which should be applied in the same way in every situation falling within its scope and is capable of applying both to situations covered by national law and to situations covered by Community law, that obligation requires the judicial bodies of the Member States and the Community, for practical and legal reasons, to give it a uniform interpretation.

38. Only the Court of Justice acting in cooperation with the courts and tribunals of the Member States pursuant to Article 177 of the Treaty is in a position to ensure such uniform interpretation.

39. The jurisdiction of the Court of Justice to interpret Article 50 of TRIPs is thus not restricted solely to situations covered by trade-mark law.

This seems to be a strong assertion of the Court's jurisdiction with regard to the TRIPs Agreement. It has been argued however that the ECJ in this case was unclear as to the limits of its jurisdiction, and that while it might be expected that the ECJ would claim jurisdiction only over the definition of obligations clearly assumed by the EU, in practice the Court is reluctant to allocate competences within mixed agreements, and has only clearly excluded its own jurisdiction in areas which unquestionably fall within the *exclusive* competence of the Member States.[281]

Nevertheless, the Court in *Dior* did not purport to interfere with the jurisdiction of Member States' courts to appraise the direct effect of provisions which fall within neither exclusive EU competence nor exclusive Member State competence, and in respect of which the EU has not yet legislated:

> 47. In a field to which TRIPs applies and in respect of which the Community has already legislated, as is the case with the field of trade marks, it follows from the judgment in *Hermès*, in particular paragraph 28 thereof, that the judicial authorities of the Member States are required by virtue of Community law, when called upon to apply national rules with a view to ordering provisional measures for the protection

[281] Koutrakos (n 75) 201.

> of rights falling within such a field, to do so as far as possible in the light of the wording and purpose of Article 50 of TRIPs.
>
> 48. On the other hand, in a field in respect of which the Community has not yet legislated and which consequently falls within the competence of the Member States, the protection of intellectual property rights, and measures adopted for that purpose by the judicial authorities, do not fall within the scope of Community law. Accordingly, Community law neither requires nor forbids that the legal order of a Member State should accord to individuals the right to rely directly on the rule laid down by Article 50(6) of TRIPs or that it should oblige the courts to apply that rule of their own motion.

The broad jurisdiction of the Court to rule on the interpretation of mixed agreements was confirmed in two subsequent sets of infringement proceedings brought by the Commission against Member States, involving the Berne Convention for the Protection of Literary and Artistic Works[282] and the Convention for the Protection of the Mediterranean Sea respectively.[283] The Court ruled that mixed agreements had the same status within the EU legal order as purely EU (then Community) agreements 'insofar as the provisions fall within the scope of Community competence', and it repeated that when they ensure compliance with commitments arising from an agreement entered by the EU, the Member States are fulfilling an obligation in relation to the EU which has assumed responsibility for its performance.[284] In both cases, the subject matter of the agreements was held to be largely governed by EU law, and the Court ruled that there was a clear EU interest in compliance by the Member States and the EU with the commitments entered.

To sum up, the ECJ has clearly construed its jurisdiction over mixed agreements very broadly, and it seems that only where a particular area falls clearly within the exclusive competence of the Member States under a mixed agreement will the Court actually decline to interpret or enforce it. However, the Court decided in *Merck Genéricos* that in a field such as patent law, where there is only limited EU legislation, the Member States remain competent to choose whether or not to give certain provisions of a mixed agreement direct effect.[285]

(D) THE ECJ AND THE CFSP

The jurisdiction of the Court is expressly excluded from the field of the CFSP.[286] However, Article 275 TFEU contains two major exceptions to the exclusion of ECJ jurisdiction. The first relates to the boundaries between the CFSP and the rest of EU law, which are now governed by Article 40 TEU.[287] The CFSP was created to include all areas of foreign and security policy within its scope, and the possibility of conflict with other parts of EU external competence was therefore quite clear. The terms of Article 40 TEU, which, as indicated above, protect the CFSP and the other parts of EU law against undue encroachment by the other, mean that the ECJ, in practice, may exercise judicial control over the choice of legal basis and consequently may check that the EU

[285] Case C–431/05 *Merck Genéricos Produtos Farmacêuticos* [2007] ECR I–7001, [46]–[47].

[286] Art 24(1) TEU; Art 275 TFEU.

[287] See (n 127) and text. The ECJ had recognized such a role for itself under the predecessor to Art 40 TEU, which was Art 47 EU. In Case C–170/96 *Commission v Council (Airport Transit Visas)* (n 132) [16]–[17] the ECJ defined its role as being to ensure that acts which fell under the TEU did not encroach upon the powers conferred by the EC Treaty on the Community. The Court ruled that it had jurisdiction to review the content of a measure adopted outside the scope of the Community Pillar in order to ascertain whether it affected the powers of the Community, and to annul the measure if it appeared that it should have been based on a provision of the EC Treaty instead. There is no reason why the interpretation of Art 47 EU in this earlier case would not be equally applicable to an interpretation of Art 40 TEU as far as concerns the CFSP. See also Case C–176/03 *Commission v Council (Environmental crimes)* [2005] ECR I–7879.

was competent to act as it did, and that the procedural requirements provided in the appropriate Treaty basis have been satisfied.

The second exception empowers the Court to hear actions brought by natural or legal persons to review the legality of decisions which effectively provide for the imposition of sanctions or 'restrictive measures' against them.[288] This amendment, introduced by the Lisbon Treaty, follows the approach adopted by the ECJ to its own jurisdiction in the earlier *Kadi* case.[289]

There had in fact already been sustained criticism of the lack of adequate judicial control over the law adopted within the CFSP, particularly on account of the likely consequences for affected individuals.[290] An increasing number of CFSP measures have a quasi-legislative character, and the limits of judicial review over the CFSP led to its description as 'patently insufficient from the perspective of the rule of law'.[291] Further, the EU Courts have generally been reluctant to exercise strong judicial control over political decisions of the EU institutions on sensitive matters, which compounds the problem of limited judicial scrutiny over CFSP acts.

10 COHERENCE, CONSISTENCY, AND COOPERATION IN THE GOVERNANCE OF EU INTERNATIONAL RELATIONS

One of the key aims of EU foreign policy is said to be the coordination of the variety of different external activities. As noted above, some overlap in competences is inevitable given that the CFSP covers 'all areas of foreign and security policy'. While not the only or even the most important aspect of foreign policy, consistency is nonetheless a significant goal in the external relations of an entity like the EU, which is a relative newcomer to the international scene and which still lacks a coherent and recognizable international identity. It is now the task of the Foreign Affairs Council and the High Representative to ensure consistency in the Union's external action.[292] Given the position of the High Representative as Vice-president of the Commission and President of the Foreign Affairs Council, she is assumed to be in a unique position to coordinate the various aspects of EU external action.

In order to establish and shape its international role more effectively, the EU needs to ensure coordination on a number of different levels. Coordination needs to be pursued, first, in the international representation of the EU, secondly, across the different activities of the EU, and, thirdly, between the Member States and the EU.

(A) INTERNATIONAL REPRESENTATION AND THE EU

In order to perform its tasks under the Treaties, the EU has developed extensive diplomatic relations with other subjects of international law. Almost all states have established diplomatic missions to the EU, which have been renamed Representative missions to the EU, and the EU maintains relations through EU delegations in more than 150 states and international organizations.[293] They are placed

[288] Art 274 para 2 provides: 'The Court shall have jurisdiction… to rule on proceedings, brought in accordance with the conditions laid down in the fourth paragraph of Article 263 of this Treaty, reviewing the legality of decisions providing for restrictive measures against natural or legal persons adopted by the Council on the basis of Chapter 2 of Title V of the Treaty on European Union'.

[293] Art 221 TFEU. The fact that Commission delegations have been replaced by Union delegations, following the Lisbon Treaty, is an important symbolic shift.

under the authority of the High Representative and enjoy customary privileges and immunities under international law. Their task is to communicate the views and to represent the interests of the Union as a whole. As far as international organizations are concerned, Article 220 TFEU provides that it shall be for the Commission to ensure the maintenance of all appropriate relations with the organs of the United Nations and its specialized agencies, the Council of Europe, the OECD, the OSCE, and with 'all international organisations'.[294]

Several provisions of the TEU aim at organizing the representation of the interests of the Union internationally. Article 27(2) TEU provides that in matters which come within the scope of the CFSP the Union is represented by the High Representative, who shall express the position of the Union in international organizations and in international conferences. The High Representative and the Member States are responsible for the implementation of CFSP decisions.[295] The High Representative is assisted by the European External Action Service,[296] which is to work in cooperation with the diplomatic services of the Member States.[297] Moreover, the Council may, on a proposal of the High Representative, appoint a special representative with a mandate in relation to particular policy issues.

Article 34 TEU requires Member States to coordinate their action in international organizations and at international conferences as well as to uphold EU common positions in such fora, but, given the institutional complexity of the EU and the elaborate sharing of powers between the EU and the Member States in the field of external relations, this is not a straightforward task.[298] It is however for the High Representative to organize this cooperation. In international organizations and at international conferences where not all the Member States participate, those which do take part have particular duties: they are required to uphold EU common positions and to keep the others, as well as the High Representative, informed of any matter of common interest. The Member States which are also members of the UN Security Council are required to 'concert' their practice and to keep the other Member States and the High Representative fully informed. Those Member States which are permanent members of the Security Council must, in the execution of their functions, ensure the defence of the positions and the interests of the Union, even though this is without prejudice to their responsibilities under the provisions of the UN Charter.

Article 35 TEU provides for the cooperation of the diplomatic and consular missions of the Member States and the EU delegations in third countries and international conferences, and their representations to international organizations, in ensuring that the common positions and joint actions adopted by the Council are complied with and implemented. This cooperation is to take the form of an exchange of information, carrying out joint assessments, and contributing to the implementation of the EU's common positions and joint actions.

(B) THE REQUIREMENT OF COHERENCE ACROSS POLICIES

The traditional division in foreign policy between high politics, for example matters of war and peace, and low politics, for example economic and other more 'technical' matters, is arguably legally reflected in the separate legal regimes of the CFSP and of the other competences of the EU. The reality of political and economic interaction in a highly globalized world, however, prevails over

[294] To this end, two liaison offices were established, one in Geneva and one in New York, by the General Secretariat of the Council.

[297] Art 27(3) TEU.

[298] On the uneven character of EU representation in international organizations see S Gstöhl, '"Patchwork Power" Europe: The EU's Representation in International Institutions' (2009) 14 EFAR 385.

this kind of formal juridical delineation.[299] Perhaps it is this mismatch between the constitutional framework and the practical reality of EU international relations that has kept the theme of 'coherence' at the centre of EU attention, such that it has been described as 'the true recurrent theme of European foreign policy'.[300]

Until the entry into force of the Lisbon Treaty, the legal attempt to ensure greater coherence was said to have, at best, mixed results.[301] Gauttier argued that the 'common strategy', one of the CFSP legal instruments which was to aim at greater overall unity and some kind of harmonization, had rarely been used; that the creation of the role of the Secretary General/High Representative for CFSP had also introduced a degree of competition with the Commissioners responsible for external relations, and that the power to conclude agreements which conferred on the EU an embryonic international legal personality was only a partial compromise.[302] Against this background, the attempt of the Lisbon Treaty drafters to introduce greater coherence by redesigning aspects of the institutional architecture of EU external relations can be understood.

Article 21(3) TEU now requires the EU to ensure consistency 'between the different areas of its external action and between these and its other policies'.[303] The 'single institutional framework' referred to in the TEU's preamble is intended to ensure the desired consistency and coherence, and the High Representative has particular responsibility in this regard.

(c) COORDINATION BETWEEN THE MEMBER STATES AND THE EU: COOPERATION AND COMPLIANCE

The effectiveness of EU external activities also depends on whether it manages to ensure the cooperation, and where necessary the compliance, of its Member States. The duty of loyal or sincere cooperation is now to be found in Article 4(3) TEU. The broader application of this obligation is reinforced by Article 24(3) of the TEU, according to which the Member States are under a duty to support the EU's external and security policy 'actively and unreservedly in a spirit of loyalty and mutual solidarity'. Member States are further required to work together to enhance and develop their mutual political solidarity. The TEU stipulates that they shall refrain from any action which is contrary to the interests of the Union or likely to impair its effectiveness as a cohesive force in international relations, and the Council is required to ensure compliance with these principles.

The ECJ has regularly invoked the obligation now contained in Article 4(3) TEU together with other provisions to put pressure on the EU institutions and the Member States to act in defence of the EU's common interests.[304] The Court ruled that Member States are required to facilitate the achievement of the EU's tasks and to abstain from any measure which could jeopardize the attainment of the objectives of the Treaty.[305] The Court emphasized that this 'duty of genuine cooperation is of general application and does not depend either on whether the Community [now EU] competence is exclusive, or on any right of the Member State to enter into obligations towards non-member countries'.[306]

The Article 4(3) TEU obligation to comply with EU law imposes legal constraints on the Member States in their external action in a number of ways. It has been held to require Member States to

facilitate the application of EU law, and thus not to give effect to a bilateral agreement falling outside the field of application of the Treaties, where giving effect to it would impede the application of a right conferred by EU law and the supremacy of EU law.[307] The *Open Skies* cases provide a further example in which, although the agreements concluded by the Member States fell largely outside exclusive EU competence, the Member States' treaty-making powers in the field were said by the ECJ to be constrained by the need to comply with the Treaty rules on the right of establishment.[308] We have seen above that not only are the Member States precluded from individual action when an EU agreement exists, but they are also subject to special duties of action and abstention, in particular where the Commission has submitted proposals to the Council which represent the point of departure for concerted EU action.[309]

The international representation of the EU became a particularly salient issue at the time of the Uruguay Round negotiations which led to the establishment of the WTO. In *Opinion 1/94*, the Commission claimed to be the sole spokesperson for the Community and the Member States, on the basis that this was necessary to secure the effective implementation of the WTO agreements. The ECJ ruled that these concerns could not influence the allocation of competence between the EU and Member States, but it also ruled that where the subject matter of an agreement fell within shared EU–Member State competence, close cooperation between them in the process of negotiation, conclusion, and fulfilment of commitments entered into was essential.[310] The obligation to cooperate flowed from the requirement for unity in the international representation of the EU.[311]

In terms of dispute resolution too, Member States are bound by the duty of sincere cooperation *vis-à-vis* the EU. The ECJ ruled in the *MOX Plant* case that Ireland was in breach of the duty of cooperation by instituting dispute settlement proceedings against the UK under UNCLOS in relation to matters which fall within EU competence without consulting the Commission.[312]

Finally, it has been argued that the unity of the international presence of the EU and its Member States which is achieved through this kind of cooperation may be greater than the unity resulting from the exclusive competence of the EU, since it operates also when the Member States are exercising their own competences.[313]

11 CONCLUSIONS

i. The area of external relations has becoming increasingly important in recent years, as the EU strives to assert its presence more effectively on the world stage, on issues such as trade, climate change, development, human rights, and international terrorism.

ii. One of the crucial issues for the conduct of EU international relations is effective coordination across many dimensions and levels. This includes coordination across policy fields, coordination

[307] Case 235/87 *Matteucci v Communauté française de Belgique et al* [1988] ECR 5589, 5611–5612. See also the Bilateral Investment Treaty (BITS) cases, (n 215). While the ECJ used Art 351 TFEU (ex Art 307 EC) to resolve these cases, this Art is a mere expression of the broader principle of sincere cooperation (see on this link the conclusions of AG Poiares Maduro in Case C–205/06 *Commisison v Austria* [2009] ECR I–1301, [33]–[43].

[313] M Cremona, 'Defending the Community Interest: the Duties of Cooperation and Compliance' in Cremona and de Witte (n 20).

between the EU and the Member States, and coordination at the level of international representation. Consistency across and between policies has become a constitutional requirement of EU external relations.

iii. In an EU of twenty-seven with several applications for membership pending, the problem of coordinating the EU's international relations, the problem of effective international law-making, and the ambition of presenting a single face to the outside world become increasingly challenging.

iv. The importance of EU external action is reflected in the range of new institutional and substantive provisions introduced by the Lisbon Treaty to enhance and streamline the EU's global profile and role. Only time and political practice will reveal whether these innovations have succeeded in strengthening the EU as an international actor.

HUMAN RIGHTS IN THE EU

1 CENTRAL ISSUES

i. The status of human rights within the EU legal order has changed dramatically since the Communities were founded in the 1950s. While the draft European Political Community Treaty in 1953 would have made the European Convention on Human Rights (ECHR) part of the law of the new Communities, this Treaty was never adopted due to France's rejection of the closely-linked Defence Community Treaty in 1954. Consequently, the EEC and Euratom Treaties in 1957 were cautiously drafted and omitted any reference to human rights. More than fifty years later however, human rights have returned to occupy a central position within the EU legal order, ranking along with the Treaty provisions as primary norms of EU law.[1]

ii. At least three formal sources for EU human rights law are today listed in Article 6 TEU. The first is the EU Charter of Fundamental Rights which was proclaimed in 2000, and upgraded to the same binding legal status as the Treaties by the Lisbon Treaty in 2009. The second is the ECHR, which has long been treated by the ECJ as a 'special source of inspiration' for EU human rights principles, and which will become formally binding on the EU when the EU accedes to the ECHR, as Article 6(2) TEU now mandates it to do. The third is the 'general principles of EU law', a body of legal principles, including human rights, which have been articulated and developed by the ECJ over the years, drawing from national constitutional traditions, the ECHR and other international treaties signed by the Member States. These three sources overlap, since many provisions of the EU Charter are based on the ECHR, creating a certain amount of legal confusion. Other international sources of human rights law have only rarely been invoked. The ECJ has recently made clear that it views the Charter as 'the principal basis' on which the EU Courts will ensure that human rights are observed.[2] However, the UK, Poland, and the Czech Republic negotiated a protocol to the Lisbon Treaty which purports to limit the impact of the Charter in those states.

iii. EU human rights standards are binding on the EU and its institutions and bodies in all of their activities, and on the Member States when they are acting within the scope of EU law. Questions continue to arise about what Member State action falls 'within the scope of EU law' for these purposes.

iv. The EU has gradually integrated human rights concerns into a range of its policies. The main internally-oriented policy of this kind is the body of anti-discrimination law, which has expanded

[1] Cases C–402 and 415/05 P *Kadi & Al Barakaat International Foundation v Council and Commission* [2008] ECR I–6351, [308].

[2] Discussion document of the ECJ on certain aspects of the accession of the EU to the ECHR, Luxembourg, 5 May 2010, [2].

significantly in recent years,[3] and also the developing field of data protection and privacy. In EU external relations, human rights have featured more prominently.[4] The EU actively promotes its 'human rights and democratization' policy in many countries around the world, and uses human rights clauses in its international trade and development policies. It has imposed a human rights-based 'political conditionality' on candidate Member States, and claims to integrate human rights concerns throughout its common foreign and security policy. In 2009 the EU for the first time concluded a major international human rights treaty, the UN Convention on the Rights of Persons with Disabilities, which has both internal and external policy implications.

v. Apart from the adoption of the Charter of Rights, there have been several other important institutional initiatives in the human rights field, including the establishment in 1999 of a sanction mechanism for serious and persistent breaches of human rights in Article 7 TEU, and the establishment of an EU Fundamental Rights Agency in 2007.

vi. The various institutional and policy developments in the human rights field have not silenced the debate as to whether the EU is a significant human rights organization.[5] Critics have questioned whether EU attention to human rights protection amounts to more than high rhetoric, or self-serving instrumentalism.[6] In the fields of immigration, asylum, and criminal justice in particular, the EU has been sharply criticized for neglecting and undermining human rights concerns.[7] It has been suggested that the EU needs to rethink its human rights policies if it is not to continue losing influence in a changing international political environment.[8]

2 INTRODUCTION

The constitutional framework of the EU today boasts an impressive array of human rights provisions. The Treaties declare that the EU is founded on respect for human rights, they give binding effect to the Charter of Fundamental Rights and Freedoms, and envisage EU accession to the ECHR. The Treaties require all candidate Member States to adhere to these values and they include a sanction mechanism for existing Member States which seriously and persistently violate such rights. There is a clear legal basis in Article 19 TFEU for a strong EU anti-discrimination regime. The centrepiece of the EU's human rights framework is now Article 6 TEU which provides:

> 1. The Union recognises the rights, freedoms and principles set out in the Charter of Fundamental Rights of the European Union of 7 December 2000, as adapted at Strasbourg, on 12 December 2007, which shall have the same legal value as the Treaties.

The provisions of the Charter shall not extend in any way the competences of the Union as defined in the Treaties.

The rights, freedoms and principles in the Charter shall be interpreted in accordance with the general provisions in Title VII of the Charter governing its interpretation and application and with due regard to the explanations referred to in the Charter, that set out the sources of those provisions.

2. The Union shall accede to the European Convention for the Protection of Human Rights and Fundamental Freedoms. Such accession shall not affect the Union's competences as defined in the Treaties.

3. Fundamental rights, as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms and as they result from the constitutional traditions common to the Member States, shall constitute general principles of the Union's law.

Significant as they are, these developments are relatively recent. For many years after its founding, the EEC was primarily focused on the creation of a common market, even though efforts to broaden the integration project were never entirely off the agenda.[9] But support for doing so, and for re-inserting more ambitious goals and fundamental values into the EU's legal and constitutional framework, was initially slow to get off the ground. It was not until the 1970s that human rights concerns regained formal institutional recognition by the European Community, including by the ECJ and the Member States. The most significant developments came in the 1990s with the adoption of the Maastricht and Amsterdam Treaties and the drafting of the Charter of Rights. Yet the legacy of the EEC's roots in the common market project remains significant since, despite its constantly changing and expanding nature, the EU's dominant focus remains economic, and the debate over the appropriate scope of its human rights role remains contested even after the important changes introduced by the Lisbon Treaty.

3 THE ECJ DISCOVERS THE 'GENERAL PRINCIPLES OF EU LAW'

In a series of cases which came before the ECJ in the 1950s and 1960s, the Court initially resisted attempts by litigants to invoke rights and principles recognized by domestic law (such as legitimate expectations, proportionality, and natural justice), and was unwilling to treat them as part of the Community's legal order, even where they were fundamental principles common to the legal systems of most or all Member States.[10] In 1969, however, in the *Stauder* case, the Court announced a change in attitude.[11]

For some years before this, anxious discussions had taken place within the European Commission and Parliament about the implications of the doctrine of supremacy of EU law which the Court had pronounced shortly beforehand in *Costa v ENEL*,[12] and specifically about the perceived risk that human rights protected under domestic constitutions might be undermined.[13] The President of the Commission argued openly for an understanding of fundamental human rights as part of the 'general

[9] For discussion of the early years of the Communities with regard to human rights see M Dauses, 'The Protection of Fundamental Rights in the Community Legal Order' (1985) 10 ELRev 398, 399; P Pescatore, 'The Context and Significance of Fundamental Rights in the Law of the European Communities' (1981) 2 HRLJ 295.

[11] Case 29/69 *Stauder v City of Ulm* [1969] ECR 419.

[12] Case 6/64 *Costa v ENEL* [1964] ECR 585.

[13] See the report by Fernand Dehousse, a Belgian member of the European Parliament, Report on the Supremacy of EC Law over National Law of the Member States, Eur Parl Doc 43 (1965-66), [1965] JO (2923) 14.

principles' of EU law which, although autonomous in source from national constitutions, nevertheless took into account the common legal conceptions of the Member States.[14] The ECJ took its cue from these discussions, and eventually in the *Stauder* case it responded positively to an argument based on the fundamental right to human dignity, which the applicant alleged was violated by the domestic implementation of an EU provision concerning a subsidized butter scheme for welfare recipients.[15] Having construed the EU measure in a manner consistent with protection for human dignity, the ECJ declared that it 'contains nothing capable of prejudicing the fundamental human rights enshrined in the general principles of Community law and protected by the Court'.[16]

In *Stauder* the ECJ thus affirmed the recognition of general principles of EU law, including protection for fundamental human rights.[17] This approach was elaborated upon in the famous *Internationale Handesgesellschaft* case, in which the German Constitutional Court was asked to set aside an EU measure concerning forfeiture of an export-licence deposit which was alleged to conflict with German constitutional rights and principles such as economic liberty and proportionality.

Case 11/70 **Internationale Handelsgesellschaft v Einfuhr und Vorratstelle für Getreide und Futtermittel**
[1970] ECR 1125

THE ECJ

3. Recourse to the legal rules or concepts of national law in order to judge the validity of measures adopted by the institutions of the Community would have an adverse effect on the uniformity and efficacy of Community law. The validity of such measures can only be judged in the light of Community law. In fact, the law stemming from the Treaty, an independent source of law, cannot because of its very nature be overridden by rules of national law, however framed, without being deprived of its character as Community law and without the legal basis of the Community itself being called into question. Therefore the validity of a Community measure or its effect within a Member State cannot be affected by allegations that it runs counter to either fundamental rights as formulated by the constitution of that State or the principles of a national constitutional structure.

4. However, an examination should be made as to whether or not any analogous guarantee inherent in Community law has been disregarded. In fact, respect for fundamental rights forms an integral part of the general principles of Community law protected by the Court of Justice. The protection of such rights, whilst inspired by the constitutional traditions common to the Member states, must be ensured within the framework of the structure and objectives of the Community. It must therefore be ascertained, in the light of the doubts expressed by the Verwaltungsgericht, whether the system of deposits has infringed rights of a fundamental nature, respect for which must be ensured in the Community legal system.

The ECJ concluded there had been no infringement of the rights claimed, since the restriction on the freedom to trade was not disproportionate to the general interest advanced by the deposit system. When the case returned to the German court, however, the national court concluded that

[15] Case 29/69 *Stauder* (n 11). For a similar case much more recently see Cases C–92–93/09 *Volker und Markus Schecke GbR v Land Hessen*, 9 Nov 2010.

[16] Case 29/69 *Stauder* (n 11) [7].

[17] For a discussion of the early 'fundamental rights' implicit within the Treaty itself which were developed by the ECJ as general principles of law see D Shachor-Landau, 'Reflections on the Two European Courts of Justice' in Y Dinstein *et al* (eds), *International Law at a Time of Perplexity* (Martinus Nijhoff, 1989) 792. See also U Scheuner, 'Fundamental Rights in European Community law and in National Constitutional Law' (1975) 12 CMLRev 171.

the principle of proportionality enshrined in German constitutional law had indeed been violated by the EU deposit system. The effect of this and of subsequent cases on the constitutional relationship between EU law and German law is discussed in Chapter 9, but the case also provides an interesting illustration of the difficulty facing the ECJ in seeking to assimilate the 'common constitutional principles' of the Member States as part of the EU legal order.

4 THE ECJ DEVELOPS THE GENERAL PRINCIPLES OF EU LAW

After the *Handelsgesellschaft* ruling, the ECJ continued to emphasize the autonomy of EU general principles of law, while simultaneously stressing that the source of these general principles is not entirely independent of the legal cultures and traditions of the Member States. In the case of *Nold*, concerning the drastic impact on the applicant's right to a livelihood of the EU's regulation of the market in coal, the Court identified (i) international human rights agreements and (ii) common national constitutional traditions as the two primary sources of 'inspiration' for the general principles of EU law.

Case 4/73 **Nold v Commission**
[1974] ECR 491

13. As the Court has already stated, fundamental rights form an integral part of the general principles of law, the observance of which it ensures.

In safeguarding these rights, the Court is bound to draw inspiration from constitutional traditions common to the Member States, and it cannot therefore uphold measures which are incompatible with fundamental rights recognized and protected by the Constitutions of those States.

Similarly, international treaties for the protection of human rights on which the Member States have collaborated or of which they are signatories, can supply guidelines which should be followed within the framework of Community law.

It may be noteworthy that Article 6(3) TEU today, which otherwise codifies the ECJ's case law on the general principles of law, mentions only the ECHR and national constitutional traditions as sources of inspiration, and omits express reference to other international human rights instruments. On the other hand, the ECJ has only infrequently cited international human rights treaties other than the ECHR, and it seems likely to continue to do so when it sees fit, in particular since Article 6(3) can be argued to reflect an affirmation of the ECJ's 'general principles' case law rather than a deliberate limitation of it by excluding international human rights instruments as a source.

(A) THE ECHR AS A SOURCE OF SPECIAL SIGNIFICANCE FOR EU LAW

Prior to the enactment of the EU Charter of Rights, the main international instrument for the protection of human rights drawn upon by the ECJ as a 'special source of inspiration' for the general principles of EU law was the European Convention on Human Rights. From early on the ECJ ruled that EU legislation restricting the powers of Member State authorities to limit free movement and residence,[18] EU legislation concerning the right to pursue claims by judicial process, rights against

[18] Case 36/75 *Rutili v Minister for the Interior* [1975] ECR 1219.

sex discrimination, data protection, and privacy, were specific EU law manifestations of general principles enshrined in the ECHR.[19] Although the ECJ notably never ruled that the ECHR was formally binding upon the EU, or that its provisions were formally incorporated into EU law,[20] Article 6 TEU has—ever since the adoption of the Maastricht Treaty in 1992—referred expressly to the ECHR. More practically, the ECJ and even the CFI (now the General Court)[21] routinely cited the 'special significance' of the Convention and the rulings of the Court of Human Rights as a key source of inspiration for the general principles of EU law.[22] This allowed the ECJ to continue to assert the autonomy and supremacy of EU law, while avoiding the charge of having judicially incorporated international agreements into EU law without Member State consent.

Finally, by treating the ECHR as a source of inspiration rather than a formally binding or fully incorporated bill of rights, the ECJ retained the freedom to 'go beyond' the Convention in recognizing rights as part of EU law, such as the right to lawyer–client confidentiality (at least in the case of independent lawyers) derived from principles 'common to' Member States' laws in *AM & S*[23] and *AKZO*,[24] and more recently refugee rights[25] and data protection,[26] which may not be similarly protected under the ECHR.[27] This idea of the ECHR as a 'floor' rather than a ceiling for EU human rights law has been maintained by Article 52(3) of the EU Charter of Fundamental Rights which specifies that the meaning and scope of those Charter rights which correspond to rights guaranteed by the ECHR is to be the same as those laid down by the ECHR, but that 'this provision shall not prevent Union law providing more extensive protection'. It remains to be seen how strictly the ECJ will treat the stipulation that Charter rights corresponding to ECHR rights shall have the 'same' meaning as the ECHR rights, but it seems clear that the ECJ is willing to look closely at the relevant ECtHR case law for guidance.[28]

(B) OTHER INTERNATIONAL HUMAN RIGHTS INSTRUMENTS

Apart from the ECHR, the ECJ has only very occasionally drawn on other regional and international instruments, and this neglect has attracted criticism.[29] In *Defrenne v Sabena III*,[30] the ECJ, deeming the elimination of sex discrimination to be a fundamental EU right, supported its conclusion by drawing

[19] Case 222/84 *Johnston v Chief Constable of the RUC* [1986] ECR 1651, [18]; Case C–424/99 *Commission v Austria* [2001] ECR I–9285, [45]–[47] on access to judicial protection; Case C–13/94 *P v S and Cornwall County Council* [1996] ECR I–2143, [18]; Case C–185/97 *Coote v Granada Hospitality* [1998] ECR I–5199, [21]–[23] on discrimination; Cases C–465/00, 138, and 139/01 *Rechnungshof v Österreichischer Rundfunk* [2003] ECR I–12489, on privacy and data protection.

[20] For an early discussion see AG Trabucchi in Case 118/75 *Watson and Belmann* [1976] ECR 1185, 1207.

[21] See however Case T–347/94 *Mayr-Melnhof Kartongesellschaft mbH v Commission* [1998] ECR II–1751, [311]; Case T–112/98 *Mannesmannröhren-Werke v Commission* [2001] ECR II–729, [59], in which the CFI ruled that it had no jurisdiction to 'apply' the ECHR and that it was not part of EU law.

[22] See, eg, Case C–260/89 *Elliniki Radiophonia Tileorassi AE v Dimotiki Etairia Pliroforissis and Sotirios Kouvelas* [1991] ECR I–2925, [41]; *Opinion 2/94 on Accession by the Community to the ECHR* [1996] ECR I–1759, [33]; Case C–299/95 *Kremzow v Austria* [1997] ECR I–2629, [14].

[23] Case 155/79 *AM & S Europe Ltd v Commission* [1982] ECR 1575.

[24] Case C–550/07 P *Akzo Nobel Chemicals v Commission*, 14 Sept 2010.

[25] Case C–465/07 *Elgafaji v Staatssecretaris van Justitie* [2009] ECR I–921.

[26] Case C–28/08 *Commission v Bavarian Lager*, 29 June 2010.

[27] This was noted by AG Warner at the time in his opinion in *AM & S* (n 23). Since then, the absence of lawyer–client confidentiality has been found by the ECtHR in a range of cases to contribute to a violation of the right to individual petition under Art 34, the right to privacy under Art 8, and the right to a fair trial under Art 6 ECHR.

[28] Case C–400/10 PPU *J.McB v LE*, 5 Oct 2010, [53]; Case C–279/09 *DEB v Bundesrepublik Deutschland*, 22 Dec 2010, [35]–[52].

[29] O de Schutter and I Butler, 'Binding the EU to International Human Rights Law' (2008) 27 YBEL 277. For an argument that the EU is subject to more extensive human rights obligations under international law than the ECJ has hitherto acknowledged, including under custom and treaties, see T Ahmed and I de Jesús Butler, 'The EU and Human Rights: An International Law Perspective' (2006) 17 EJIL 771.

[30] Case 149/77 *Defrenne v Sabena* [1978] ECR 1365.

on the European Social Charter and one of the International Labour Organization Conventions,[31] and it has cited ILO Conventions in a number of other labour law cases. In a challenge brought to the EU Family Reunification Directive by the European Parliament, the ECJ, while upholding the Directive, drew on the ECHR and the EU Charter, but also on the ICCPR and on the International Convention on the Rights of the Child, and referred also to three other Council of Europe human rights instruments which were cited in the Directive.[32] The UN Convention on Refugees (the Geneva Convention) has regularly been cited in cases dealing with the EU's Directive on minimum standards for asylum-seekers, since the Directive expressly draws on the Geneva Convention.[33] Further, the International Covenant on Economic, Social and Cultural Rights (ICCPR) was recently considered by the Court.[34]

Yet while the ICCPR has been identified as a source of inspiration for the general principles of EU law in a handful of cases,[35] the ECJ in the case of *Grant* was surprisingly dismissive of an opinion given by the ICCPR Human Rights Committee.[36] The ECJ also rejected reliance on the Oviedo Convention on Human Rights and Biomedicine when interpreting a provision of an EU Directive on transport of human blood and organs, on the basis that not all Member States had ratified the Convention.[37]

In the now famous *Kadi* and *Al-Barakaat* cases, in which the ECJ struck down the EU's implementation of UN Security Council anti-terrorist asset-freezing resolutions for violation of fundamental rights, while the CFI cited human rights norms deriving from customary international law, from '*ius cogens* rules of international law', and principles referred to in the preamble to the UN Charter,[38] the ECJ cited none of these sources. Although repeating the phrase originally coined in *Nold* to the effect that the Court would look to 'the guidelines supplied by international instruments for the protection of human rights on which the Member States have collaborated or to which they are signatories',[39] the ECJ in *Kadi* cited only the EU Charter and the ECHR as a source for the human rights applicable in the case.[40]

Further, while many provisions of the EU Charter of Rights were themselves based on international human rights instruments,[41] as the explanatory notes to the Charter indicate,[42] it is not clear whether those international instruments or the courts or the bodies established to interpret them will be treated as influential or persuasive authority in the interpretation of the Charter provisions.

[31] [1978] ECR 1365, [26]. See also Case 6/75 *Horst v Bundesknappschaft* [1975] ECR 823, 836, where AG Reischl drew on an 'internationally recognized principle of social security as set out in Art 22(2) of International Labour Convention No. 48 on the Maintenance of Migrants' Pension Rights of 1935'.

[32] Case C–540/03 *European Parliament v Council* [2006] ECR I–5769, [37]–[39], [57], [107]. The three C of E instruments were the European Social Charter 1961, the Revised European Social Charter, and the European Convention on the legal status of migrant workers 1977.

[33] See, eg, Cases C–175–179/08 *Aydin Salahadin Abdulla et al v Germany*, 2 Mar 2010; Cases C–57 and 101/09 *Bundesrepublik Deutschland v B*, 9 Nov 2010.

[34] In Case C–73/08 *Bressol v Gouvernement de la Communauté française*, 13 Apr 2010, the ECJ considered the relationship between the ICESCR and the citizenship provisions of EU law in the context of access of students to higher education.

[35] For a case in which the ECJ cited both the ICCPR and the Convention on the Rights of the Child see Case C–244/06 *Dynamic Medien Vertriebs GmbH v Avides Media AG* [2008] ECR I–505.

[36] Case C–249/96 *Grant v South West Trains Ltd* [1998] ECR I–621, [44]–[47]. For a case involving criminal penalties where the ICCPR was discussed by the CFI see Case T–48/96 *Acme Industry v Council* [1999] ECR II–3089.

[37] Case C–237/09 *Belgium v De Fruytier*, 3 June 2010.

[38] Case T–315/01 *Kadi v Council and Commission* [2005] ECR II–3649, [228]–[231].

[39] Cases C–402 and 415/05 P *Kadi* (n 1) [283].

[40] Ibid [333]–[376]. For the General Court's robust subsequent ruling to this, following the re-listing of *Kadi* by the Commission, see Case T–85/09 *Kadi v Commission and Council*, 30 Sept 2010.

[41] Examples are the ICCPR, the ICESCR, the Council of Europe Convention on Human Rights and Biomedicine, the Rome Statute of the International Criminal Court, the UN Convention on the Rights of the Child, the Geneva Convention on Refugees, and the various Social Charters of the EU and the Council of Europe.

[42] The explanations to the Charter are given interpretative significance by Art 6(1) TEU and Art 52(7) of the Charter. The text of the explanations is available in the Official Journal at [2007] OJ C303/17.

It should also be noted that the EU Network of Independent Experts on Fundamental Rights which was established in 2002, but was replaced by a different network after the EU Fundamental Rights Agency was established in 2008, argued repeatedly for the standards of protection for fundamental rights within EU law to be 'indexed' to international human rights standards, so as to avoid requiring Member States to choose between their loyalty to EU law and their other international commitments. To sum up, the ECJ's emphasis on the EU's constitutional autonomy and its relative disconnection from the wider international human rights system has given rise to critical comment.[43]

(c) NATIONAL CONSTITUTIONAL TRADITIONS

The case law of the Court has also drawn only infrequently on national constitutional provisions, despite the symbolic prominence given both by the Court and the EU treaties to the 'common constitutional traditions' of the states.[44] While occasionally the Advocate General has conducted a brief survey of national constitutional provisions, the Court has much more rarely cited any specific constitutional provision.[45]

The reasons are to some extent obvious, in that it is more difficult for the ECJ to assert a 'common' approach where a particular right does not appear in every national constitution, whereas an instrument like the ECHR is intended to reflect the collectively shared commitments of all member states. Further, the fear of compromising the doctrinal supremacy of EU law by appearing to defer to a particular national constitutional provision has animated the ECJ's case law ever since *Costa v ENEL*.[46] This was evident in the *Hauer* case, where an EU regulation restricting the applicant's right to plant vines on her land prompted the referring German Federal Administrative Court to declare that an EU regulation which was incompatible with German fundamental constitutional rights would not be applied. We see the ECJ here seeking to ground its decision both in the 'common constitutional traditions' of the states and in the collective commitments of the ECHR.

Case 44/79 **Hauer v Land Rheinland-Pfalz** [1979] ECR 3727

THE ECJ

14. As the Court declared in its judgment of 17 December 1970, Internationale Handelsgesellschaft [1970] ECR 1125, the question of a possible infringement of fundamental rights by a measure of the Community institutions can only be judged in the light of Community law itself. The introduction of special criteria for assessment stemming from the legislation or constitutional law of a particular

[43] A related cause for concern has been the EU's occasional use of 'disconnection' clauses in relation to international human rights instruments. An example is the Council of Europe's Convention on Action against Trafficking in Human Beings, in which the EU included a disconnection clause which effectively provides that the EU and its Member States, in relations between themselves, will apply the rules of EU law on trafficking in persons rather than the provisions of the new Convention. See Art 40(3) of the Council of Europe Convention on Action Against Trafficking in Human Persons 2005 (CETS no 197). See the criticism delivered by Serhiy Holovaty, Chairperson of the Parliamentary Assembly of the Council of Europe's Committee on Legal Affairs, to the 26th Conference of European Ministers for Justice, Apr 2005, arguing that this could allow for the lowering of human rights standards below the 'floor' set by Council of Europe Conventions.

[44] For a case in which the CFI agreed that national parliamentary traditions could potentially form a source of inspiration for the general principles of EU law see Cases T–222, 327, and 329/99 *Martinez, Gaulle, Front national and Bonino v European Parliament* [2001] ECR II–2823, [240].

[45] See, eg, Case 17/74 *Transocean Marine Paint v Commission* [1974] ECR 1063, [17].

[46] Case 6/64 [1964] ECR 585.

> Member State would, by damaging the substantive unity and efficacy of Community law, lead inevitably to the destruction of the unity of the Common Market and the jeopardizing of the cohesion of the Community.
>
> 15. The Court also emphasized in the judgment cited, and later in the judgment of 14 May 1974, Nold [1974] ECR 491, that fundamental rights form an integral part of the general principles of the law, the observance of which it ensures; that in safeguarding those rights, the Court is bound to draw inspiration from constitutional traditions common to the Member States, so that measures which are incompatible with the fundamental rights recognized by the Constitutions of those States are unacceptable in the Community, and that, similarly, international treaties for the protection of human rights on which the Member States have collaborated or of which they are signatories, can supply guidelines which should be followed within the framework of Community law. That conception was later recognized by the joint declaration of the European Parliament, the Council and the Commission of 5 April 1977, which, after recalling the case law of the Court, refers on the one hand to the European Convention for the Protection of Human Rights and Fundamental Freedoms of 4 November 1950.

> . . .
>
> 17. The right to property is guaranteed in the Community legal order in accordance with the ideas common to the Constitutions of the Member States, which are also reflected in the first Protocol to the European Convention for the Protection of Human Rights . . .
>
> 20. [I]t is necessary to consider also the indications provided by the constitutional rules and practices of the nine member states. One of the first points to emerge in this regard is that those rules and practices permit the legislature to control the use of private property in accordance with the general interest. Thus some constitutions refer to the obligations arising out of the ownership of property (German Grundgesetz, article 14 (2), first sentence), to its social function (Italian Constitution, article 42 (2)), to the subordination of its use to the requirements of the common good (German Grundgesetz , article 14 (2), second sentence, and the Irish Constitution, article 43.2.2*), or of social justice (Irish Constitution, article 43.2.1*) . . .

A further question which arises when the 'common constitutional traditions' are cited as a source for EU human rights principles is whether the Court should confer EU recognition only on those rights shared by all (or most) states, or whether recognition as a fundamental right by even one Member State should suffice (the so-called 'maximum standard' approach) for the ECJ to treat such a right as part of the general principles of EU law.[47] In *Mannesmannröhren-Werke*, concerning the right to remain silent in the context of competition proceedings, the CFI was dismissive of the 'maximum standard' approach:

> In the field of competition law, the national laws of the Member States do not, in general, recognise a right not to incriminate oneself. It is, therefore, immaterial to the result of the present case whether or not, as the applicant claims, there is such a principle in German law.[48]

In the case of *AM & S,* not all of the Member States were happy with the Court's derivation of a principle of lawyer–client confidentiality from a comparative survey of the laws of the Member States, and the French government in particular argued that the case represented 'an attempt to foist on the EU what was no more than a domestic rule of English law'.[49] However, the Advocate General took the

[47] Compare L Besselink, 'Entrapped by the Maximum Standard: on Fundamental Rights, Pluralism and Subsidiarity in the European Union' (1998) 35 CMLRev 629 and J Weiler, 'Fundamental Rights and Fundamental Boundaries' in his *The Constitution of Europe* (Cambridge University Press, 1999) ch 3.

[48] Case T–112/98 *Mannesmannröhren-Werke* (n 21) [84].

[49] See AG Warner in Case 155/79 *AM & S* (n 23) 1575, 1631. Case 17/74 *Transocean Marine Paint* (n 45) provides another example of the recognition by the Court of a general principle of Community law where some but not all of the Member States afford protection to the particular right or principle.

view that a general principle could be distilled from among the various states even if the 'conceptual origin' of the principle and 'the scope of its application in detail' differed as between Member States.[50] Almost three decades later in *AKZO*, however, the ECJ refused to extend the EU's general principle of legal professional privilege beyond the context of independent lawyers, despite the fact that a number of Member States have since extended the privilege to in-house lawyers, since the Court took the view that there was no 'developing trend' or 'uniform tendency' in this direction across the Member States such as to justify widening the EU's general principle.[51]

In *Omega Spielhallen*, the ECJ abstracted from the strong and *particular conception* of human dignity within German law to a more *general concept* of human dignity, which could be said to be shared by all the Member States. However, *Omega Spielhallen* was an easier case to decide, in that it did not concern a domestic dignity-based challenge to the validity of an EU measure, but rather a state seeking an individual derogation from EU free movement rules to comply with its constitutional requirements on human dignity.[52] To that extent, as also in *Dynamic Medien Vertriebs*,[53] Germany was seeking recognition for its own standards of protection for human dignity, not in order to impose them on the other Member States, but in order to gain a country-specific exemption from EU free movement principles.

Finally, even where it might be said that there is general consensus amongst the states that a particular right exists, it seems inevitable that there will not be a consensus as to how that right should be interpreted and 'translated' into a general principle of EU law. For instance, even if all Member States agree that there should be protection for freedom of expression, they are likely to have rather different views on how, in a particular context, it should be protected. National legal systems vary widely, for example, in the degree to which they regulate the nature and content of broadcasting.[54] To take another example, while all Member States recognize the right to life, a handful of the twenty-seven states including Ireland and Malta continue to maintain extremely restrictive national abortion laws, which in Ireland's case partly reflects the constitutional status of the right to life of the foetus. Another example can be seen in the strong protection given by Germany's *Grundgesetz* to economic rights and to the freedom to pursue a trade or profession, while the constitutions of other states reflect different social priorities. In *Grant* and *D v Council*, the ECJ relied in part on different national legal conceptions of marriage to deny that there had been any breach of the applicants' rights under the general principles of EU law.[55]

In other words, although the idea of 'common constitutional traditions' as a foundation for the general principles of EU law is an attractive one in principle, it is unquestionably true that the differences between specific national conceptions of particular human rights are often great. Thus, even if the ECJ accepts the argument of a particular party that a given right should be recognized as part of EU law, the way in which the Court determines the legal scope of that right and the permissible restrictions upon it in the context of the case at hand may well differ from the way it would be applied in a national context, as seen in *Hauer*[56] and *Internationale Handelsgesellschaft*.[57]

5 HUMAN RIGHTS-BASED CHALLENGES TO EU ACTION

The ECJ in recent years has heard a growing number of challenges to EU legislation in which violation of human rights has been pleaded as a ground. The Court has begun to take these claims seriously and to cite and engage with the case law of the European Court of Human Rights in evaluating the compatibility of EU laws with human rights provisions. EU judicial processes have also occasionally been challenged for their compatibility with fundamental procedural rights.[58] Nonetheless, despite its increasing engagement with human rights arguments, the number of cases in which the Court has actually annulled the EU legislation being challenged remains, with some dramatic exceptions in the anti-terrorism field, relatively low.[59] Overall there has been a greater degree of success in challenging individual administrative acts of the Commission or other EU actors, while the Court has remained broadly deferential in its review of EU legislation outside the anti-terrorism domain.

(A) CHALLENGES TO EU LEGISLATION

Although in *Nold*[60] the Court had declared that 'general principles of law' would take precedence, in the event of conflict, over specific Community measures, the ECJ emphasized that in the dispute at hand the rights to property and to a trade or profession were far from absolute, and that limitations were justified by the EU's overall objectives. This approach has characterized many of the cases concerning property and economic rights since.[61] A typical case is *Booker Aquacultur*, in which the Court ruled that an EU directive on the control of fish diseases which failed to require compensation for the compulsory destruction of diseased fish by national authorities did not constitute a disproportionate restriction on the right to property.[62]

In many other contexts, too, there has been limited success in challenging EU legislation.[63] In proceedings brought by the Dutch government to challenge the legality of the Biotechnology Directive on the basis that its provisions concerning the patentability of isolated parts of the body violated the right to human dignity and to human integrity, the ECJ responded that the legislative provisions in question ensured full respect for human dignity and integrity.[64] In a challenge by the European Parliament to the EU Directive on family reunification, the ECJ responded that the Directive did not violate the

[60] Case 4/73 *Nold v Commission* [1974] ECR 491.

[61] See, eg, Cases C–37and 38/02 *Di Lenardo Adriano Srl v Ministero del Commercio con l'Estero* [2004] ECR I–6911; Cases C–453/03, 11, 12, and 194/04 *The Queen, ex p ABNA Ltd v Secretary of State for Health and Food Standards Agency* [2005] ECR I–10423; Case C–295/03 P *Alessandrini v Commission* [2005] ECR I–5673; Case C–347/03 *Regione autonoma, Friuli-Venezia Giulia and Agenzia regionale per lo sviluppo rurale (ERSA) v Ministero delle Politiche Agricole e Forestali* [2005] ECR I–3785; Case T–195/00 *Travelex Global and Financial Services Ltd v Commission* [2003] ECR II–1677.

[62] Cases C–20 and 64/00 *Booker Aquacultur Ltd and Hydro Seafood GSP v The Scottish Ministers* [2003] ECR I–7411.

[63] See however Cases C–92–93/09 *Schecke* (n 15) in which the ECJ ruled that the publication rules for an EU agricultural subsidies regime violated EU data privacy rights and the right of privacy under the EU Charter and the ECHR.

[64] Case C–377/98 *Netherlands v Council and Parliament* [2001] ECR I–7079.

right to respect for family life or the obligation to have regard to the best interests of the child, and that it left the Member States a sufficient margin of appreciation in implementing the Directive to enable them to comply with such rights.[65] In *Advocaten voor de Wereld*, the Court ruled that the abolition of the requirement of double criminality by the EU Framework Decision establishing a European Arrest Warrant did not violate the principle of legality, equality, or non-discrimination.[66] And in *Ordre des barreaux francophones et germanophone,* the ECJ ruled that the provisions of EU money laundering Directive 91/308 obliging lawyers to cooperate with the money laundering authorities did not, properly interpreted, infringe the right to a fair trial protected under Article 6 ECHR and the EU Treaty.[67] This technique used by the ECJ of requiring EU legislation to be interpreted and implemented in compliance with fundamental human rights has the effect both of insulating EU legislation against challenge and, as we shall see below, of imposing human rights obligations, as a matter of EU law, on national authorities.

It is in the field of anti-terrorism in the post 9/11 era, however, that the ECJ in recent years has become active and has been prepared to strike down a range of EU laws for disproportionately violating individual rights.[68] In some of its earlier rulings in this field, including the *Bosphorous* case which concerned the effects on the applicant's rights of an EU regulation implementing UN-mandated sanctions against the former Yugoslavia, the ECJ had ruled that the fundamental interests of the international community could justify restrictions of property or trade rights caused by the impounding of a Yugoslav-owned aircraft leased by the applicant, even where the latter appeared to be entirely uninvolved in any activities of the Yugoslav state.[69] Similarly in challenges brought by a number of organizations against whom various kinds of EU sanctions had been adopted, including the *PKK*[70] and *Segi*,[71] the CFI and the ECJ had rejected challenges against these sanctions for a range of procedural reasons despite the alleged violation of substantive rights. However, in a series of important rulings handed down since those earlier judgments, most dramatically in *Kadi I*[72]and *Kadi II*,[73] but also

[65] Case C–540/03 *European Parliament v Council* (n 32). See also Case C–578/08 *Chakroun v Minister van Buitenlandse Zaken*, 4 Mar 2010, [44], [59]–[65]. For other cases in which the ECJ ruled that Member States had latitude to interpret an EU dir in such a way as to comply with fundamental rights (rights to property, to privacy, to an effective remedy, and the rights of the child respectively) see Case C–275/06 *Promusicae v Telefonica de Espana SAU*, 29 Jan 2009, and Case C–400/10 PPU *J.McB* (n 28).

[73] Case T–85/09 *Kadi* (n 40).

in *OMPI*,[74] *PMOI (I)*[75] and *PMOI (II)*,[76] *KONGRA-GEL*,[77] *Othman*,[78] *Hassan*,[79] *Sison*,[80] *Al-Aqsa I* and *II*,[81] and others, the ECJ and the CFI, or more recently the General Court, have struck down a number of EU laws, both autonomous EU measures which were not specifically required by the UN Security Council, as well as UN-mandated measures, for violating a range of rights, most notably due process (rights of defence) and the right to property.[82]

The *Kadi* cases are complex, raising many questions about the competences of the EU as well as the relationship of EU law to the international legal order.[83] For the purposes of this chapter, however, the most significant parts of the judgment are those which deal with the ECJ's treatment of fundamental rights.

Cases C–402 and 415/05 **P Yassin Abdullah Kadi and Al Barakaat International Foundation v Council and Commission**
[2008] ECR I–6351

[Note Lisbon Treaty renumbering: Art 6 EU is Art 6 TEU; Art 220 EC is Art 19 TEU; Art 297 EC is Art 347 TFEU; Art 300(7) EC is Art 216(2) TFEU; Art 307 EC is Art 351 TFEU]

The EU adopted a set of legislative measures including a number of regulations designed to implement a series of UN Security Council Resolutions, beginning with Resolution 1267 (1999). These UN Resolutions were adopted in the wake of the 11 September 2001 attacks on the US, and required all states to freeze the funds and other financial resources of any persons or entities controlled directly or indirectly by the Taliban, or associated with Osama bin Laden or the Al-Qaeda network, and established a Sanctions Committee to ensure their implementation. The applicants were among the persons named on the UN list of those associated with Osama bin Laden or Al-Qaeda and were placed also on the EU list. In 2001 Kadi, together with Yusuf and the Al Barakaat Foundation, filed an action with the CFI (now the General Court) of the EU, claiming that the Court should annul the implementing EU acts which brought them within the scope of the sanctions. They argued that the contested EU regulations infringed their fundamental rights, in particular their right to the use of their property and the right to a fair hearing, by imposing heavy civil and criminal sanctions on them without first hearing them or giving them the opportunity to defend themselves, and they had no opportunity to seek judicial review. The applicants asserted that they were not told why the sanctions were imposed on them, that the evidence and facts relied on were not communicated to them and that they had no opportunity to explain themselves. The CFI rejected their application for the annulment of the EU measures, ruling that it had no authority or jurisdiction to question Resolutions of the UN Security Council, even indirectly, other

[83] For discussion of the international law aspects see Ch 10.

than for violation of *jus cogens;*[84] and that in this instance there was no violation of *jus cogens*.[85] The applicants appealed that ruling to the ECJ, which took rather a different approach.

THE ECJ

281 In this connection it is to be borne in mind that the Community is based on the rule of law, inasmuch as neither its Member States nor its institutions can avoid review of the conformity of their acts with the basic constitutional charter, the EC Treaty, which established a complete system of legal remedies and procedures designed to enable the Court of Justice to review the legality of acts of the institutions (Case 294/83 *Les Verts* v *Parliament* [1986] ECR 1339, paragraph 23).

282 It is also to be recalled that an international agreement cannot affect the allocation of powers fixed by the Treaties or, consequently, the autonomy of the Community legal system, observance of which is ensured by the Court by virtue of the exclusive jurisdiction conferred on it by Article 220 EC, jurisdiction that the Court has, moreover, already held to form part of the very foundations of the Community.

283 In addition, according to settled case-law, fundamental rights form an integral part of the general principles of law whose observance the Court ensures. For that purpose, the Court draws inspiration from the constitutional traditions common to the Member States and from the guidelines supplied by international instruments for the protection of human rights on which the Member States have collaborated or to which they are signatories. In that regard, the ECHR has special significance.

284 It is also clear from the case-law that respect for human rights is a condition of the lawfulness of Community acts (Opinion 2/94, paragraph 34) and that measures incompatible with respect for human rights are not acceptable in the Community (Case C–112/00 *Schmidberger* [2003] ECR I–5659, paragraph 73 and case-law cited).

285 It follows from all those considerations that the obligations imposed by an international agreement cannot have the effect of prejudicing the constitutional principles of the EC Treaty, which include the principle that all Community acts must respect fundamental rights, that respect constituting a condition of their lawfulness which it is for the Court to review in the framework of the complete system of legal remedies established by the Treaty.

286 In this regard it must be emphasised that, in circumstances such as those of these cases, the review of lawfulness thus to be ensured by the Community judicature applies to the Community act intended to give effect to the international agreement at issue, and not to the latter as such.

...

302 It is true also that Article 297 EC implicitly permits obstacles to the operation of the common market when they are caused by measures taken by a Member State to carry out the international obligations it has accepted for the purpose of maintaining international peace and security.

303 Those provisions cannot, however, be understood to authorise any derogation from the principles of liberty, democracy and respect for human rights and fundamental freedoms enshrined in Article 6(1) EU as a foundation of the Union.

304 Article 307 EC may in no circumstances permit any challenge to the principles that form part of the very foundations of the Community legal order, one of which is the protection of fundamental rights, including the review by the Community judicature of the lawfulness of Community measures as regards their consistency with those fundamental rights.

305 Nor can an immunity from jurisdiction for the contested regulation with regard to the review of its compatibility with fundamental rights, arising from the alleged absolute primacy of the resolutions of the Security Council to which that measure is designed to give effect, find any basis in the place that

[84] Case T–315/01 *Kadi* (n 38) [192]–[208], [221]–[225]; Case T–306/01 *Yusuf and Al Barakaat International Foundation v Council and Commission* [2005] ECR II–3533, [242]–[258], [272]–[276].

[85] Case T–315/01 *Kadi* (n 38) [226]–[232]; Case T–306/01 *Yusuf* (n 84) [277]–[283].

obligations under the Charter of the United Nations would occupy in the hierarchy of norms within the Community legal order if those obligations were to be classified in that hierarchy.

306 Article 300(7) EC provides that agreements concluded under the conditions set out in that article are to be binding on the institutions of the Community and on Member States.

307 Thus, by virtue of that provision, supposing it to be applicable to the Charter of the United Nations, the latter would have primacy over acts of secondary Community law . . .

308 That primacy at the level of Community law would not, however, extend to primary law, in particular to the general principles of which fundamental rights form part.

. . .

[*The ECJ went on to rule that the procedure for re-examining the listing of individuals before the UN Sanctions Committee was essentially diplomatic and intergovernmental, and did not offer guarantees of judicial protection. There was no right of representation, no obligation to give reasons or evidence, and no opportunity for judicial review. To grant immunity from jurisdiction to the listing measures within the EU legal order would constitute 'a significant derogation from the scheme of judicial protection of fundamental rights' laid down by the EU Treaties*.]

326 It follows from the foregoing that the Community judicature must, in accordance with the powers conferred on it by the EC Treaty, ensure the review, in principle the full review, of the lawfulness of all Community acts in the light of the fundamental rights forming an integral part of the general principles of Community law, including review of Community measures which, like the contested regulation, are designed to give effect to the resolutions adopted by the Security Council under Chapter VII of the Charter of the United Nations.

. . .

333 It is appropriate to examine, first, the claims made by Mr Kadi and Al Barakaat with regard to the breach of the rights of the defence, in particular the right to be heard, and of the right to effective judicial review, caused by the measures for the freezing of funds as they were imposed on the appellants by the contested regulation.

334 In this regard, in the light of the actual circumstances surrounding the inclusion of the appellants' names in the list of persons and entities covered by the restrictive measures contained in Annex I to the contested regulation, it must be held that the rights of the defence, in particular the right to be heard, and the right to effective judicial review of those rights, were patently not respected.

335 According to settled case-law, the principle of effective judicial protection is a general principle of Community law stemming from the constitutional traditions common to the Member States, which has been enshrined in Articles 6 and 13 of the ECHR, this principle having furthermore been reaffirmed by Article 47 of the Charter of fundamental rights of the European Union, proclaimed on 7 December 2000 in Nice (OJ 2000 C 364, p. 1). . . .

352 It must, therefore, be held that the contested regulation, in so far as it concerns the appellants, was adopted without any guarantee being given as to the communication of the inculpatory evidence against them or as to their being heard in that connection, so that it must be found that that regulation was adopted according to a procedure in which the appellants' rights of defence were not observed, which has had the further consequence that the principle of effective judicial protection has been infringed.

353 It follows from all the foregoing considerations that the pleas in law raised by Mr Kadi and Al Barakaat in support of their actions for annulment of the contested regulation and alleging breach of their rights of defence, especially the right to be heard, and of the principle of effective judicial protection, are well founded . . .

357 Next, it falls to be examined whether the freezing measure provided by the contested regulation amounts to disproportionate and intolerable interference impairing the very substance of the fundamental right to respect for the property of persons who, like Mr Kadi, are mentioned in the list set out in Annex I to that regulation . . .

369 The contested regulation, in so far as it concerns Mr Kadi, was adopted without furnishing any guarantee enabling him to put his case to the competent authorities, in a situation in which the

restriction of his property rights must be regarded as significant, having regard to the general application and actual continuation of the freezing measures affecting him.

370 It must therefore be held that, in the circumstances of the case, the imposition of the restrictive measures laid down by the contested regulation in respect of Mr Kadi, by including him in the list contained in Annex I to that regulation, constitutes an unjustified restriction of his right to property…

372 It follows from all the foregoing that the contested regulation, so far as it concerns the appellants, must be annulled.

The ECJ however decided that it would maintain the relevant Regulation 881/2002 in effect for three months, to allow the EU institutions time to cure the procedural breach and to re-list the applicants, which they duly did. Following the publication and communication to the applicants of summary reasons provided by the UN Sanctions Committee, and having allowed them a brief opportunity to respond to the allegations, the Commission in November 2008 adopted a regulation maintaining the sanctions against Kadi, who promptly brought a further action for annulment before the General Court.[86]

In *Kadi II* the General Court, while clearly disapproving of the reasoning of the ECJ in *Kadi I* concerning the relationship of EU law to international law and to the UN Charter and UN Security Council Resolutions in particular, nonetheless followed the approach outlined by the ECJ in the first ruling.[87] The General Court undertook a robust review of the adequacy of the evidence offered to justify the sanctions, and of the Commission's observation of the rights of the defence, and rejected these as superficial and inadequate.[88] Consequently, the General Court annulled the Regulation, without this time maintaining it in force to allow any further attempt to cure the continuing breaches of procedural rights.[89]

The *Kadi* cases and many of those which followed are important and raise many complex legal issues for the EU and the Member States, and they have generated international controversy on account of the global relevance of many of the sanctions.[90] But what is most striking, for the purposes of the present chapter, is that the ECJ and the CFI/General Court have been much less deferential to the EU institutions, and even to international institutions such as the UN Security Council, when considering challenges based on fundamental rights. This is not to say that the European Courts have struck down all such asset-freezing measures, or that they have not granted latitude to the EU institutions in certain contexts. In a number of cases involving sanctions of a more political nature, for example as compared with the cases involving suspected individual assistance to terrorism, the CFI/General Court and ECJ have upheld EU sanctions and dismissed allegations of violation of procedural rights.[91] Further, even where the ECJ or the General Court has annulled measures, the victory has sometimes been pyrrhic, as for example in *Kadi I* where the ECJ maintained the impugned measures in force to give the institutions time to correct the procedural breaches, or *Al-Aqsa* where, despite annulling the impugned measure on procedural grounds, the General Court ruled that the domestic court had established as a matter of substance that the applicants had knowledge that their funds were being used for terrorist purposes.[92]

[86] Commission Regulation 1190/2008, amending the earlier Regulation 881/2002 to maintain Kadi's name in the relevant Annex [2008] OJ L322/25.

[87] Case T–85/09 *Kadi* (n 40) [112]–[126] in particular.

[88] Ibid [171]–[188], [193]–[194].

[89] At the time of writing Case T–85/09 *Kadi II* is on appeal to the ECJ.

[90] For a sample of the vast academic literature on the subject see (n 72).

[91] See, eg, Case T–181/08 *Pye Phyo Tay Za v Council*, 19 May 2010 concerning sanctions against an individual associated with the Myanmar regime, and Case T–390/08 *Bank Melli Iran v Council* [2009] ECR II–3967 concerning sanctions against an Iranian bank accused of providing financial support for nuclear proliferation.

[92] Case T–348/07 *Al-Aqsa* (n 81) [128]–[132].

Nonetheless, the stream of high-profile and politically salient anti-terrorist sanctions cases in recent years has shown both the General Court and the ECJ displaying greater willingness to review and to strike down EU legislation for violation of fundamental rights, and to assert the priority of fundamental rights in EU law over secondary EU legislation, and even over the most important norms of international law.

(B) CHALLENGES TO EU ADMINISTRATIVE ACTION

Rights-based challenges to EU administrative action have also regularly been made. Two such contexts in which rights-based challenges have frequently arisen are those of staff disputes on the one hand, and competition law proceedings on the other.

(i) *Staff Cases*

In a range of staff and recruitment cases the ECJ has accepted arguments based on pleas such as the violation of freedom of expression,[93] freedom of religion,[94] the right to private and family life,[95] and non-discrimination,[96] and has required the EU institutions to amend several of their practices.

The EU Courts, however, including the newly established Civil Service Tribunal (CST) which hears staff complaints at first instance prior to any appeal to the General Court or ECJ,[97] have ruled that proceedings involving suspension and the withholding of pay are not judicial but administrative in nature, so that the requirements of Article 6(1) ECHR relating to a fair trial do not apply to the Commission in this context.[98] Nonetheless administrative proceedings affecting EU staff are certainly subject to the rights of the defence,[99] and the CST recently ruled that the EU staff regulations and conditions of employment must be read in the light of the provisions of the Charter of Fundamental Rights.[100] Equally, the actions of the EU anti-fraud office (OLAF), in conducting investigations or forwarding information to national judicial authorities in the context of investigations into alleged misconduct by EU employees or officials, must comply with the rights of the defence.[101]

(ii) *Competition Proceedings*

The area of the Commission's enforcement powers in competition proceedings has been a fertile source of litigation, in which general principles of law and fundamental rights—often the cluster

[93] Case 100/88 *Oyowe and Traore v Commission* [1989] ECR 4285. Compare the unsuccessful outcome in the colourful case of Case C–274/99 P *Connolly v Commission* [2001] ECR I–1611.

[94] Case 130/75 *Prais v Council* [1976] ECR 1589.

[95] Case T–58/08 *Commission v Roodhuijzen* [2009] ECR II–3797 on the meaning of the term 'non-marital partnership' in the EU Staff Regs. Compare the earlier Cases C–122 and 125/99 P *D v Council* (n 55), in which the ECJ had ruled that the principle of equal treatment, non-discrimination on grounds of sex, and respect for private and family life were all not breached by the Council's refusal to recognize a Swedish employee's registered partnership with a same-sex partner (which had a civil status comparable to marriage in Sweden) as equivalent to marriage for the purposes of obtaining an EU staff household allowance.

[96] Case C–404/92 P *X v Commission* [1994] ECR I–4737; Cases C–122 and 125/99 P *D* (n 55); Case C–191/98 P *Tzoanos v Commission* [1999] ECR I–8223; Case C–252/97 *N v Commission* [1998] ECR I–4871.

[97] For the first appeal to the ECJ following an appeal from the Civil Service Tribunal to the General Court see Case C–197/09 *RX-II, M v EMEA*, 17 Dec 2009.

[98] Case F–80/08 *Wenig v Commission*, 30 Nov 2009.

[99] In Case C–344/05 P *Commission v De Bry* [2006] ECR I–10915, however, the ECJ ruled that the rights of the defence did not include any obligation on the Commission to give a prior warning to an employee before a staff appraisal.

[100] Case F–51/07 *Bui Van v Commission*, 11 Sept 2008.

[101] Case T–48/05 *Franchet and Byk v Commission* [2008] ECR II–1585; Cases F–5 and 7/05 *Violetta and Schmit v Commission*, 28 Apr 2009.

referred to as the rights of the defence,[102] including the right to a fair hearing[103] and related principles such as non-retroactivity of penal liability,[104] data protection, and privacy,[105] or *nullum crimen, nulla poena sine lege*[106]—have frequently been invoked to challenge EU executive action.

The Commission's powers in competition proceedings are very wide, including the authority to investigate and make searches, as well as to impose severe financial penalties, and affected parties have repeatedly called upon the Court to limit and control their exercise by reference to fundamental legal principles.[107] The relatively early case of *Hoechst* involved a challenge by the applicant company to various decisions of the Commission ordering an investigation into its affairs in the context of suspected anti-competitive practices.

Cases 46/87 and 227/88 **Hoechst AG v. Commission** [1989] ECR 2859

THE ECJ

12. It should be noted, before the nature and scope of the Commission's powers of investigation under Article 14 of Regulation No 17 are examined, that that article cannot be interpreted in such a way as to give rise to results which are incompatible with the general principles of Community law and in particular with fundamental rights.

. . .

14. In interpreting Article 14 of Regulation No 17, regard must be had in particular to the rights of the defence, a principle whose fundamental nature has been stressed on numerous occasions in the Courts decisions (see in particular the judgment of 9 November 1983 in Case 322/81 Michelin v. Commission [1983] ECR 3461 paragraph 7).

. . .

17. Since the applicant has also relied on the requirements stemming from the fundamental right to the inviolability of the home, it should be observed that, although the existence of such a right must be recognized in the Community legal order as a principle common to the laws of the Member States

[102] For some examples see the principle of *non bis in idem* in Case C–397/03 P *Archer Daniels Midland v Commission* [2006] ECR I–4429, the right of access to documents (specifically to the file containing objections and evidence against a defendant) in Case T–210/01 *GEC v Commission* [2005] ECR II–5575; Cases C–204–219/00 P *Aalborg Portland A/S et al v Commission* [2004] ECR I–123; and the right to challenge findings of fact in Case C–407/08 P *Knauf Gips KG v European Commission*, 1 July 2010, [90]–[92].

[103] Case C–185/95 P *Baustahlgewebe v Commission* [1998] ECR I–8417 (on the length of time of proceedings), and compare, Cases T–213/95 and 18/96 *SCK & FNK v Commission* [1997] ECR II–1739. Other cases outside the competition field which uphold the right to a fair hearing include Case C–49/88 *Al-Jubail Fertilizer Company v Council* [1991] ECR I–3187 (on anti-dumping); Case C–7/98 *Krombach v Bamberski* [2000] ECR II–1935 (in the context of the Brussels Convention); Case T–83/96 *van der Wal v Commission* [1998] ECR II–545 (on the right of access to documents used in judicial proceedings).

[104] For an important ruling of the ECJ's Grand Chamber on this principle see Cases C–189–213/02 P *Dansk Rorindustri et al v Commission* [2005] ECR I–5425. On the size of the penalty imposed see Case T–69/04 *Schunk v Commission* [2008] ECR II–2567.

[105] Case T–474/04 *Pergan Hilfsstoffe für industrielle Prozesse GmbH v Commission* [2007] ECR II–4225.

[106] Case T–99/04 *AC-Treuhand AG v Commission* [2008] ECR II–1501; Case T–446/05 *Amann & Söhne GmbH v Commission*, 28 Apr 2010.

[107] For selected examples from a long list see Cases 17/74 (n 45); Cases 209–215/78 *Van Landewyck v Commission* [1980] ECR 3125; Case 136/79 *National Panasonic v Commission* [1980] ECR 2033; Cases 100–103/80 *Musique Diffusion Française v Commission* [1983] ECR 1825; Case 322/81 *Michelin v Commission* [1983] ECR 3461; Case 5/85 *AKZO Chemie v Commission* [1986] ECR 2585; Case 374/87 *Orkem v Commission* [1989] ECR 3283; Case T–11/89 *Shell v Commission* [1992] ECR II–757; Case T–347/94 *Mayr-Melnhof* (n 21); Case C–185/95 P *Baustahlgewebe* (n 103); Case T–112/98 *Mannesmannröhren-Werke* (n 21); Case T–474/04 *Pergan Hilfsstoffe* (n 105); Case T–99/04 *AC-Treuhand* (n 106); Case T–69/04 *Schunk* (n 104).

in regard to the private dwellings of natural persons, the same is not true in regard to undertakings, because there are not inconsiderable divergences between the legal systems of the Member States in regard to the nature and degree of protection afforded to business premises against intervention by the public authorities.

18. No other inference is to be drawn from Article 8(1) of the European Convention on Human Rights which provides that: 'Everyone has the right to respect for his private and family life, his home and his correspondence'. The protective scope of that article is concerned with the development of man's personal freedom and may not therefore be extended to business premises. Furthermore, it should be noted that there is no case law of the European Convention on Human Rights on that subject.

19. None the less, in all the legal systems of the Member States, any intervention by the public authorities in the sphere of private activities of any person, whether natural or legal, must have a legal basis and be justified on the grounds laid down by law, and, consequently, those systems provide, albeit in different forms, protection against arbitrary or disproportionate intervention. The need for such protection must be recognized as a general principle of Community law.

The Court found on the facts of the case that there had been no breach by the Commission of any of the principles invoked by the applicants. The judgment was criticized on the ground that the Court too rapidly dismissed the argument that the Commission's power of search contravened the right to privacy of the dwelling which is protected in the ECHR, and had overlooked existing case law of the ECtHR,[108] but the ECJ later accepted that Article 8 ECHR, as clarified in subsequent ECtHR case law,[109] did extend to business premises.[110]

Similarly, in relation to the right to a fair trial in Article 6(1) ECHR, the initial decision of the ECJ in *Orkem*,[111] in which it ruled that Article 6 did not confer the right 'not to give evidence against oneself', was at odds with the subsequent ruling of the ECtHR in *Funke*, in which that court indicated that Article 6 protected the right 'to remain silent and not to contribute to incriminating [oneself]'.[112] However the ECJ in *Hüls* and later case law emphasized the significance of the ECHR and the case law of the ECtHR and ruled that the presumption of innocence applies to competition proceedings which may result in fines.[113] Even the CFI/General Court, which has objected to direct reliance on the provisions of the ECHR and the case law of the ECtHR,[114] is willing to cite and to follow ECtHR jurisprudence on the rights of the defence in competition proceedings.[115]

[108] See in particular the *Chappell* case, App No 10461/83, Series A, No 152A.

[109] *Niemietz v Germany*, Series A, No 251, [31]; *Peck v United Kingdom* App No 44647/98, §57, ECHR 2003–I.

[110] Case C–94/00 *Roquettes Frères SA v Commission* [2002] ECR I–9011, [29].

[111] Case 374/87 (n 107) [30]. However, the Court did go on to rule that, by virtue of the 'rights of the defence' in investigative procedures, the Commission could not compel a company to provide it with answers which might involve an admission of a breach which it was incumbent on the Commission to prove. See also Case C–60/92 *Otto v Postbank* [1993] ECR I–5683. For a case dealing with alleged pressure imposed by the Commission on an applicant to admit to particular allegations in order to have the potential fine reduced see Case T–347/94 *Mayr-Melnhof* (n 21).

[112] *Funke v France*, Series A, No 256A, [44]; W van Overbeek, 'The Right to Remain Silent in Competition Investigations' (1994) 15 ECLR 127.

[113] Case C–199/92 P *Hüls v Commission* [1999] ECR I–4287, [149]–[150]. See also Case C–57/02 P *Acerinox v Commission* [2005] ECR I–6689, [87]–[89], where use by the Commission of a voluntary admission made earlier to it by an undertaking to establish an infringement did not constitute a breach of the privilege against self-incrimination or of other rights of the defence. In Case T–59/02 *Archer Daniels Midland Co v Commission* [2006] ECR II–3627, the CFI ruled that reliance on an incriminating statement contained in a report compiled by the US FBI did not in the circumstances of the case constitute a violation of the right against self-incrimination or other rights of the defence. Compare the company law context in Case T–47/02 *Danzer v Council* [2006] ECR II–1779, where the General Court ruled that the right against self-incrimination did not apply to the requirement on companies under an EC company law dir to disclose their annual accounts.

[114] Case T–112/98 *Mannesmannröhren-Werke* (n 21) [66]–[77].

[115] In Case T–99/04 *AC-Treuhand* (n 106) despite the CFI's statement that 'the Court has no jurisdiction to assess the lawfulness of an investigation under competition law in the light of provisions of the ECHR, inasmuch as those provisions do not as such form part of Community law', the CFI went on to cite and to follow ECtHR case law in [52], [137]–[150].

(c) SUMMARY

i. From the time of the ECJ's acceptance in the early 1970s that fundamental human rights were part of the general principles of EU law until the adoption of the EU Charter of Fundamental Rights, the two main sources of inspiration for those rights have been the ECHR and national constitutional traditions. Other international human rights instruments have so far played a marginal role.

ii. Although these are relatively uncontroversial and commonly accepted sources for EU general principles, the derivation by the ECJ of particular concrete rights from these general sources and their application to the circumstances of specific cases is more contested.

iii. Rather than developing either a 'maximum universal standard' based on the highest level of protection given by any single Member State, or the opposite 'lowest common denominator' approach which would recognize only the common level of protection accorded by all states, the ECJ has adopted a pragmatic if somewhat cautious (to judge by its ruling in *AKZO*[116]) case-by-case approach to identify the scope and content of particular rights which are pleaded.

iv. Until the EU actually accedes to the ECHR in accordance with Article 6(2) TEU, the Convention is not formally binding on the EU.[117] Nonetheless, the ECJ and the General Court increasingly regularly draw on the provisions of the ECHR and nowadays make extensive reference to the case law of the European Court of Human Rights.

v. The ECJ was formerly reluctant to engage in strong rights-based review of EU policy and legislation. However, with the expansion of EU policy activities into the fields of internal and external security and anti-terrorism, human rights-based challenges against EU action have more recently met with significant success before the ECJ.

vi. The General Court and the Civil Service Tribunal have also entertained many rights-based challenges to administrative action, particularly in the context of EU competition proceedings and staff disputes.

6 HUMAN RIGHTS-BASED CHALLENGES TO MEMBER STATE ACTION

Thus far we have considered the role of human rights as standards for assessing the legality of EU action and as constraints on the acts of the EU institutions. Over time, however, the ECJ also ruled that fundamental rights are binding not only on the EU institutions but also on the Member States when they are acting within the scope of application of EU law. This development remains contentious, not only because it is not always clear when and whether states are acting 'within the scope of application' of EU law, but also more generally because some Member States are resistant to the idea of the ECJ determining standards of human rights protection to be applied to them. The various situations in which EU fundamental rights have been held to bind Member States are set out below.

[116] Case C–550/07 P *Akzo Nobel* (n 24).

[117] For a contrary argument that the EU is already bound, as a matter of EU law, by the provisions of the ECHR see B de Witte, 'Human Rights' in P Koutrakos (ed), *Beyond the Established Orders: Policy Interconnections Between the EU and the Rest of the World* (forthcoming 2011).

(A) APPLYING PROVISIONS OF EU LEGISLATION BASED ON PROTECTION FOR HUMAN RIGHTS

When applying provisions of EU legislation which are based on protection for human rights, Member States are bound by the general principles of EU law. This was first articulated by the ECJ in the case of *Rutili* in 1975, where the Court described provisions of Directive 64/221, which limited the restrictions Member States could impose on the free movement of workers, as specific expressions of the general principles enshrined in the ECHR.[118] Similarly in *Johnston v RUC*, the ECJ described the requirement of judicial control stipulated in the 1976 Equal Treatment Directive as reflecting a general principle of EU law derived both from national constitutional traditions and from Articles 6 and 13 ECHR (and more recently enshrined in Article 47 of the Charter), which meant that this requirement had to be interpreted as providing the right to an effective remedy.[119] In the context of data privacy, the ECJ has ruled that various provisions of the EU Data Protection Directive 95/46 and Regulation 45/2001 reflect rights of privacy protected under the ECHR and must be interpreted in that light.[120] Recently in the case of EU Directive 2004/83 on minimum standards for refugees, the Court ruled in *Elgafaji* that Article 15 of the Directive reflects human rights protections, although in this case while one of the subsections reflected the protections of Article 3 ECHR, the other reflected a different and more extensive level of protection provided under EU law.[121] Similarly, if rather more contestedly,[122] the preamble to the EU's 'Dublin' Regulation 2003/343, concerning the determination of the Member State responsible for asylum applications, asserts that the Regulation 'seeks to ensure full observance of the right to asylum guaranteed by Article 18'.[123]

(B) MEMBER STATES AS AGENTS OF THE EU

Secondly, when acting as 'agents' of the EU, implementing or enforcing EU measures, Member States are bound by the general principles of EU law.[124] In this second stage of development, the ECJ ruled that the Member States are required, when interpreting and implementing EU law, to act and to legislate in a way which respects the rights set out in the ECHR, even when the EU measures do not themselves embody the particular right claimed,[125] as was the case in *Rutili, Johnston,* and *Österreichischer Rundfunk*, above. An early example can be seen in *Kent Kirk*, in which the domestic effect of applying

[118] For comment on this aspect of the case see AG Trabucchi in Case 118/75 (n 20) 1207–1208.

[119] Case 222/84 *Johnston* (n 19). For similar rulings see Case 222/86 *UNECTEF v Heylens* [1987] ECR 4097; Case C–185/97 *Coote* (n 19); Case C–432/05 *Unibet* [2007] ECR I–2271, [37]. See also on access to court and the ECHR Case T–111/96 *ITT Promedia NV v Commission* [1998] ECR II–2937; Case C–279/09 *DEB v Bundesrepublik Deutschland*, 22 Dec 2010.

[120] Cases C–465/00, 138, and 139/01 *Österreichischer Rundfunk* (n 19) [70]–[72]. On data protection and privacy see also Case T–194/04 *Bavarian Lager Co v Commission* [2007] ECR II–4523; Case C–28/08 P *Commission v Bavarian Lager*, 28 June 2010; Case C–73/07 *Tietosuojavaltuutettu v Satakunnan Markkinapörssi Oy* [2008] ECR I–9831; H Kranenbourg, 'Access to Documents and Data-Protection in the European Union: On the Public Nature of Personal Data' (2008) 35 CMLRev 1079.

[121] Case C–465/07 *Elgafaji* (n 25). Dir 2004/83 is also based on the UN Geneva Convention of 1951: Case C–101/09 *Bundesrepublik Deutschland v B*, 9 Nov 2010.

[122] See the discussion by the ECtHR of the compatibility of the implementation of this EU Reg with the ECHR in App No 30696/09 *MSS v Belgium and Greece,* judgment of the Grand Chamber of 21 Jan 2011 and App No 32733/08 *KRS v UK*, judgment of Dec 2008.

[123] Case C–19/08 *Migrationsverket v Petrosian* [2009] ECR I– 495, [4].

[124] See, eg, Case 249/86 *Commission v Germany* [1989] ECR 1263 on the right to family life in the implementation of EU free movement regs. More recently on the EU Family Reunification Directive see Case C–578/08 *Chakroun* (n 65).

[125] Case C–219/91 *Criminal Proceedings against Ter Voort* [1992] ECR I–5495, [33]–[38], on compliance by a Member State with Art 10 ECHR when giving effect to EC Dir 65/65 on the categorization of medicinal products.

a retroactive provision of an EU fisheries regulation to a UK statutory instrument was held to violate the principle of non-retroactivity of penal liability enshrined in Article 7 ECHR.[126]

The position was clearly outlined in *Wachauf,* in which the ECJ ruled that Member States are bound, when implementing EU law, by all of the same general principles and fundamental rights which bind the EU in its actions.[127] In *Wachauf* this meant that the Member State should endeavour to provide compensation on the expiry of his tenancy for a tenant farmer who had discontinued milk production, even though the EU regulation being implemented did not specifically provide for such compensation.[128]

This technique allows the ECJ to 'save' or strengthen EU legislation which does not explicitly protect particular rights, by imposing on the Member States the obligation to protect such rights as a matter of EU law when implementing the EU measures.[129] Some recent examples are the cases of *Ordre des barreaux francophones et germanophones* concerning the right to a fair trial in the implementation of the EU Money Laundering Directive;[130] *Spector Photo Group* concerning the presumption of innocence in inferring intentional conduct in the implementation of the EU Insider Dealing Directive 2003/6;[131] *Varec* concerning the requirement on Member States to ensure that the review procedures put in place to implement the EU Public Procurement Directives comply with the rights of the defence;[132] *Chakroun* concerning the right to family life in the context of implementing the EU Family Reunification Directive 2003/86;[133] *Salahadin Abdulla* concerning protection for individual liberties and the integrity of the person in determining the risk of persecution when assessing applications for refugee status in the context of EU Directive 2004/83;[134] *Kabel Deutschland Vertrieb* concerning protection for freedom of expression and media pluralism in the context of the implementation of the Universal Service Directive;[135] *Damgaard* concerning protection for freedom of expression in the context of the prohibition of advertising of medical products under EU Directive 2001/83;[136] *Promusicae* concerning reconciliation of the rights to property, data-protection, and private life in the domestic transposition of EU directives on electronic commerce, intellectual property, and electronic communications;[137] and *Tietosuojavaltuutettu* concerning data protection and the reconciliation of freedom of expression and privacy rights in the context of the publication of tax information by a Finnish newspaper.[138]

A recent striking case is that of *JMcB*, in which the ECJ emphasized the need to weigh the right to respect for family and private life and the fundamental rights of the child in considering a dispute

[126] Case 63/83 *R v Kent Kirk* [1984] ECR 2689, [21]–[23]. See more recently on Art 7 ECHR Cases C–74 and 129/95 *Criminal Proceedings against X* [1996] ECR I–6609; Case C–60/02 *Criminal proceedings against X* [2004] ECR I–651; Case C–387/02 *Berlusconi et al* [2005] ECR I–3565.

[127] Case 5/88 *Wachauf v Germany* [1989] ECR 2609, [17]–[19]; Case C–292/97 *Karlsson* [2000] ECR I–2737.

[128] In later cases the ECJ adopted a less expansive approach to compensation as a dimension of the right to property: Cases C–20 and 64/00 *Booker Aquacultur* (n 62); Case C–2/92 *Bostock* [1994] ECR I–955; Case C–313/99 *Mulligan v Minister for Agriculture and Food* [2002] ECR I–5719.

[129] In the challenge to the EU Family Reunification Dir, Case C–540/03 *European Parliament v Council* (n 32) [15]–[23], the ECJ emphasized that the Dir did not in itself violate fundamental rights by leaving discretionary choices to the Member States, because the Dir could not be read as permitting the Member States to use their discretion in such a way as to infringe fundamental rights. See also Case C–101/01 *Lindqvist* [2003] ECR I–12971, [84]–[90].

[130] Case C–305/05 *Ordre des barreaux francophones* (n 67); M Luchtmann and R van der Hoeven, Note (2009) 46 CMLRev 301.

[131] Case C–45/08 *Specter Photo Group NV v CBFA*, 23 Dec 2009. On the presumption of innocence in the context of the national implementation of an EU reg on protection of endangered species see Case C–344/08 *Rubach* [2009] ECR I–7033.

between parents over the return and custody of children under EU Regulation 2201/2003 on jurisdiction and the enforcement of judgments.[139] Further, the cluster of cases which deal with national remedies for breach of EU rights, and which describe the right of access to a remedy as a fundamental right which must be provided by domestic law, also fall into this category.[140] Finally, cases concerning EU criminal law, and in particular the EU arrest warrant, are increasingly raising questions of fundamental rights the resolution of which turns on whether or not the domestic actions challenged fall within the scope of EU law.[141]

(c) MEMBER STATES DEROGATING FROM EU RULES OR RESTRICTING EU RIGHTS

The previous category concerned situations in which Member States were *implementing* EU measures. However, Member States are also sometimes permitted by the Treaty or by analogous principles developed by the ECJ to *derogate* from or restrict EC rules on public policy, public interest, or other grounds.

After some initial uncertainty in the case law,[142] the ECJ in *ERT* clarified its stance and declared that it had a duty to ensure that Member States adequately respected fundamental rights which were part of EU law when they adopted measures derogating from EU law.

Case C–260/89 **Elliniki Radiophonia Tileorassi AE (ERT) v Dimotiki Etairia Pliroforissis and Sotirios Kouvelas**
[1991] ECR I–2925

[Note Lisbon Treaty renumbering: Arts 56 and 66 EC are now Arts 52 and 62 TFEU respectively]

ERT was a Greek radio and television company which enjoyed exclusive rights under statute, and which sought an injunction from a domestic court against the respondents who had set up a TV station and begun to broadcast programmes in defiance of ERT's exclusive statutory rights. The defence relied mainly on EU law relating to the free movement of goods and to the rules on competition and monopolies, as well as on the provisions of the ECHR concerning freedom of expression. The ECJ began by repeating its traditional sentences on the sources of inspiration for fundamental rights in EU law, and cited its judgments in *Nold* and *Wachauf*.

THE ECJ

42. As the Court has held (see Cases C–60 & 61/84 Cinéthèque, paragraph 25 and Case C–12/86 Demirel v. Stadt Schwäbisch Gmünd, paragraph 28), it has no power to examine the compatibility

[139] Case C–400/10 PPU *JMcB* (n 28) [49]–[63] and Case C–491/10 PPU *Aguirre Zarraga*, 22 Dec 2010, [60]–[66]; Case C–394/07 *Gambazzi v Daimler-Chrysler* [2009] ECR I–2563 on the obligation to take account, under the Brussels Convention, of the right to be heard and the right to adversarial proceedings in deciding whether to recognize a national court's judgment made after debarment of a party from the proceedings.

[140] See the cases cited at (n 119).

[141] See AG Bot in Case C–261/09 *Mantello*, 7 Sept 2010, [91]–[93], concerning the application of the European Arrest Warrant.

[142] Cases 60 and 61/84 *Cinéthèque v Fédération Nationale des Cinémas Français* [1985] ECR 2605, [25]–[26] in particular, and Case 12/86 *Demirel v Stadt Schwäbisch Gmünd* [1987] ECR 3719, [28]. For criticism of *Demirel* as an attempt by the ECJ to increase its own jurisdiction and promote its own conception of fundamental rights see Coppel and O'Neill (n 59); for a response see Weiler and Lockhart (n 59).

with the European Convention on Human Rights of national rules which do not fall within the scope of Community law. On the other hand, where such rules do fall within the scope of Community law, and reference is made to the Court for a preliminary ruling, it must provide all the criteria of interpretation needed by the national court to determine whether those rules are compatible with the fundamental rights the observance of which the Court ensures and which derive in particular from the European Convention on Human Rights.

43. In particular, where a Member State relies on the combined provisions of Articles 56 and 66 in order to justify rules which are likely to obstruct the exercise of the freedom to provide services, such justification, provided for by Community law, must be interpreted in the light of the general principles of law and in particular of fundamental rights. Thus the national rules in question can fall under the exceptions provided for by the combined provisions of Article 56 and 66 only if they are compatible with the fundamental rights, the observance of which is ensured by the Court.

44. It follows that in such a case it is for the national court, and if necessary, the Court of Justice to appraise the application of those provisions having regard to all the rules of Community law, including freedom of expression, as embodied in Article 10 of the European Convention on Human Rights, as a general principle of law the observance of which is ensured by the Court.

45. The reply to the national court must therefore be that the limitations imposed on the power of the Member States to apply the provisions referred to in Articles 66 and 56 of the Treaty on grounds of public policy, public security and public health must be appraised in the light of the general principle of freedom of expression embodied in Article 10 of the European Convention on Human Rights.

The ruling represents an extension of the Court's jurisdiction to review compliance with fundamental rights by the Member States, and a further encroachment by the 'general principles of EU law' into the legal systems of the Member States.[143] In the words of two seasoned observers commenting on the *ERT* ruling, 'some of those derogations are bound up with fundamental notions governing the relationship between States and their citizens cannot fail to appreciate the potential incidence of that judgment on national sovereignty'.[144] The subsequent *Familiapress* case clarified that even where a Member State does not rely one of the Treaty-based derogations, but instead on the broader range of 'public interest justifications' developed by the ECJ for non-discriminatory or 'indistinctly applicable' national measures, the latter measure will be assessed by the ECJ for compatibility with fundamental rights.[145]

Despite arguments made, even by members of the Court itself, to reduce or confine the scope of these rulings,[146] they have been confirmed many times since.[147] In *Festersen*, a residence requirement on owners of agricultural property in a particular region of Denmark (punishable by criminal law), although arguably serving a public interest aim such as to justify a restriction on the free movement

[143] See also Case C–250/06 *United Pan-Europe Communications Belgium v Belgium* [2007] ECR I–11135 in which the ECJ ruled that a national legislative restriction (in the form of a must-carry obligation) on the freedom to provide broadcasting services, even if justified in principle by the protection of media pluralism and freedom of expression, must also ensure that it does not lead to arbitrary discrimination. For a similar case decided under the Universal Service Dir see Case C–336/07 *Kabel Deutschland* (n 135).

[146] F Jacobs, 'Human Rights in the European Union: The Role of the Court of Justice' (2001) 26 ELRev 331, 337–339. Compare his expansive earlier argument for human rights review of national measures by the ECJ in his opinion as AG in Case C–168/91 *Konstantinidis v Stadt Altensteig* [1993] ECR I–1191, 1211–1212. Compare also AG Maduro in Case C–380/05 *Centro-Europa 7 Srl* [2008] ECR I–349, [14]–[20].

[147] For a recent case see Case C–470/03 *AGM-COS.MET Srl v Suomen valtio and Tarmo Lehtinen* [2007] ECR I–2749, [72]–[73] on whether a statement by a national official which would otherwise constitute a breach of an EU dir on the safety of machinery could be justified on the basis of protection of freedom of expression.

of capital, was nevertheless held to be a disproportionate restriction on the right to choose a place of residence under Article 2(1) of Protocol 4 to the ECHR.[148]

Further, despite the narrow wording of Article 51 of the Charter of Fundamental Rights which declares that:

> The provisions of this Charter are addressed to the institutions, bodies, offices and agencies of the Union . . . and to the Member States only when they are implementing Union law,

it seems that (whatever the intentions of the various drafters[149]) the Charter has not in fact narrowed or changed the previous case law of the Court. The Explanations to the Charter, which have been given interpretative effect by Article 6(1) TEU and Article 52(7) of the Charter, use the wider term 'binding on the Member States when they act within the scope of EU law', and cite the *ERT*[150] case in support of this. Further, to judge by the case law of the ECJ since the Lisbon Treaty gave binding legal effect to the Charter, there is no indication that the Court is inclined to reduce the scope of its jurisdiction over Member State action for compliance with fundamental rights,[151] and every indication that it views the Charter as an affirmation of its case law.[152]

In the sensitive field of immigration, there has been a steady stream of rulings concerning the right to family life where states have relied on the public policy or public interest derogation to expel a migrant who was covered by EU law or to refuse some other family benefit. In cases such as *Orfanopoulos*,[153] *MRAX*,[154] *Baumbast*,[155] *Carpenter*,[156] *Akrich*,[157] *Commission v Germany*,[158] *Taskouridis*,[159] and *Ruiz Zambrano*,[160] the Court and the Advocates General emphasized the requirement on states to take adequate account of the impact of their proposed actions on the right to family life, as protected by Article 8 ECHR. Indeed in both *Carpenter* and even more notably in *Akrich*, the ECJ seemed to stretch its previous interpretation of what falls 'within the scope of EU law'.[161] The same can also be said of *Karner*, in which the ECJ similarly adopted an expansive view of what falls 'within the scope of application of EU law'.[162]

Less controversially, the Court has also confirmed that the protection of human rights *in itself* constitutes a legitimate interest which will justify a restriction on EU free movement rules.[163] In *Schmidberger* the ECJ upheld Austria's claim that the precise ground for its derogation from EU free movement rules was the protection of fundamental rights.

[148] Case C–370/05 *Festersen* [2007] ECR I–1129.

[149] For a comment on this aspect of the original drafting of the Charter in 1999–2000 see G de Búrca, 'The Drafting of the EU Charter of Fundamental Rights' (2000) 25 ELRev 331. Note however that the Charter was subsequently revised during the 2003–2004 Convention and IGC on the Constitutional Treaty, and that it has been proclaimed and adopted by a range of different actors. Discerning the intention of the multiple drafters would be a difficult task.

[163] See recently Case C–208/09, *Sayn-Wittgenstein*, 22 Dec 2010, [84]–[89] on the fundamental principle of equality as a public policy justification for restricting citizenship-related rights.

Case C–112/00 **Schmidberger v Austria**
[2003] ECR I–5659

Austria relied on protection for freedom of expression and assembly as a public policy ground to justify the temporary closure of roads (trade routes) between Austria and Italy, in order to allow an environmental demonstration to take place. The ECJ however presented the case as a conflict between two legal interests of equal weight—the freedom of movement guaranteed by the EC Treaty on the one hand, and the freedom of expression and assembly of the demonstrators guaranteed by human rights instruments such as the ECHR on the other—each of which may be restricted in pursuit of other general interests.

THE ECJ

70. In its order for reference, the national court also raises the question whether the principle of the free movement of goods guaranteed by the Treaty prevails over those fundamental rights.

71. According to settled case-law, fundamental rights form an integral part of the general principles of law the observance of which the Court ensures. For that purpose, the Court draws inspiration from the constitutional traditions common to the Member States and from the guidelines supplied by international treaties for the protection of human rights on which the Member States have collaborated or to which they are signatories. The ECHR has special significance in that respect (see, inter alia, Case C–260/89 ERT 1991 ECR I–2925, paragraph 41; Case C–274/99 P Connolly v Commission 2001 ECR I–1611, paragraph 37, and Case C–94/00 Roquette Frères 2002 ECR I–9011, paragraph 25).

72. The principles established by that case-law were reaffirmed in the preamble to the Single European Act and subsequently in Article F.2 of the Treaty on European Union (Bosman, cited above, paragraph 79). That provision states that 'the Union shall respect fundamental rights, as guaranteed by the European Convention for the Protection of Human Rights and Fundamental Freedoms signed in Rome on 4 November 1950 and as they result from the constitutional traditions common to the Member States, as general principles of Community law.'

73. It follows that measures which are incompatible with observance of the human rights thus recognised are not acceptable in the Community (see, inter alia, ERT, cited above, paragraph 41, and Case C–299/95 Kremzow 1997 ECR I–2629, paragraph 14).

74. Thus, since both the Community and its Member States are required to respect fundamental rights, the protection of those rights is a legitimate interest which, in principle, justifies a restriction of the obligations imposed by Community law, even under a fundamental freedom guaranteed by the Treaty such as the free movement of goods.

...

76. In the present case, the national authorities relied on the need to respect fundamental rights guaranteed by both the ECHR and the Constitution of the Member State concerned in deciding to allow a restriction to be imposed on one of the fundamental freedoms enshrined in the Treaty.

77. The case thus raises the question of the need to reconcile the requirements of the protection of fundamental rights in the Community with those arising from a fundamental freedom enshrined in the Treaty and, more particularly, the question of the respective scope of freedom of expression and freedom of assembly, guaranteed by Articles 10 and 11 of the ECHR, and of the free movement of goods, where the former are relied upon as justification for a restriction of the latter.

The Court went on to engage in a fairly detailed analysis of the nature and degree of the restriction imposed on the free movement of goods by the measures taken to protection freedom of expression and assembly, and ultimately ruled that it was limited, necessary, and proportionate.[164]

[164] Case C–112/00 *Schmidberger* (n 52) [81]–[94].

In *Omega Spielhallen*, Germany successfully pleaded the protection of human dignity as a ground for restricting the marketing in Germany of laser games which simulated the killing of human beings.[165] The ECJ agreed that the 'public policy derogation in [Article 52 TFEU] permitted the prohibition of commercial exploitation of such games on the basis of the protection of human dignity', which was specifically protected by the German constitution. Having declared that protection for human dignity was also a general principle of EU law, even though particular conceptions of the appropriate level of protection may differ from state to state,[166] the ECJ upheld the national restriction as a proportionate and necessary one.[167] A similar ruling was given in *Dynamic Medien Vertriebs* concerning the protection of children as a legitimate ground for restricting the free movement of goods.[168] Finally, in the controversial cases of *Laval* and *Viking*, although the ECJ agreed that the nature of the right to strike as a fundamental right must be taken into account in determining whether a restriction on the free movement of services or freedom of establishment caused by collective industrial action could be justified on the basis of the protection of workers, the Court ultimately ruled that the restrictions were disproportionate and unjustified.[169]

(D) MEMBER STATES AND SITUATIONS OUTSIDE THE SCOPE OF EU LAW

In the case of *Demirel*, the ECJ ruled that Member States are not obliged to comply with the general principles of EU law in situations which lie outside the scope of EU law.[170] Yet as cases such as *Carpenter*,[171] *Akrich*,[172] and *Ruiz Zambrano*[173] demonstrate, it is often difficult to predict which situations will be deemed by the ECJ to lie 'outside' and which 'inside' the field of application of EU law for the purposes of human rights review.[174] Further, even where a particular issue has been deemed to lie outside the scope of application of EU law and therefore to be unreviewable by the ECJ for compliance with EU fundamental rights, the ECJ has occasionally drawn the Member State's attention to its international obligations under the ECHR, as it did in *Metock*.[175]

Other cases in which the ECJ has found that the situation falls outside the scope of EU law for the purposes of human rights review include *Kremzow*,[176] which was deemed to be a 'wholly internal

[165] Case C–36/02 *Omega Spielhallen* (n 52).

[166] Ibid; see also Case C–208/09 *Sayn-Wittgenstein*, 22 Dec 2010, [87].

[167] Case C–36/02 *Omega Spielhallen* (n 52) [36]–[41].

[168] Case C–244/06 *Dynamic Medien* (n 35), subject always to the requirement of proportionality.

[169] Case C–341/05 *Laval un Partneri Svenska Byggnadsarbetareförbundet* [2007] ECR I–11767, [101]–[111]; Case C–438/05 *International Transport Workers' Federation v Viking* [2007] ECR I–10779, [74]–[90]. For another recent case on the right to collective bargaining as a fundamental right see Case C–271/08 *Commission v Germany*, 1 July 2010. On freedom of association see Case C–415/93 *URBSFA v Bosman* [1995] ECR I–4921; Case C–235/92 *Montecatini v Commission* [1999] ECR I–4539.

[170] Case 12/86 *Demirel* (n 142).

[171] (N156).

[172] (N 157).

[173] Case C–34/09 *Ruiz Zambrano v ONEM*, 8 March 2011. The AG devoted part of her opinion to the question of the scope of application of EU law for the purposes of considering fundamental rights claims.

[174] A comparison between Case C–144/95 *Maurin* [1996] ECR I–2909 and Case C–276/01 *Joachim Steffensen* [2003] ECR I–3735, [69]–[78], dealing with prosecutions for violation of foodstuff safety and labelling standards highlight the difference in treatment, as far as ECJ review of compliance with the rights of the defence is concerned, depending on whether a given situation is deemed to fall within the scope of EU law or not.

[175] Case C–127/08 *Metock* (n 161) [74]–[79].

[176] Case C–299/95 *Kremzow* (n 22).

situation', as well as *Grado and Bashir,*[177] *Annibaldi*,[178] *Noël*,[179] *Pignataro*,[180] and, controversially, *Dem' Yanenko*.[181] Finally, an interesting reference currently pending before the ECJ is that in the joined cases of *NS v Home Secretary* and *ME v Refugee Applications Commissioner* concerning whether a decision of a Member State under Council Regulation 343/2003 as to whether it will examine a claim for asylum which is not its responsibility (the so-called 'sovereignty clause') falls within the scope of EU law for the purposes of Article 6 TEU or Article 51 of the Charter of Rights.[182]

7 INSTITUTIONAL AND POLICY DEVELOPMENTS

(A) THE INCLUSION OF HUMAN RIGHTS IN THE TREATY FRAMEWORK

There was, as we have seen, no mention of human rights in the ECSC, Euratom, or EEC Treaty in the 1950s and the Court was initially reluctant to entertain rights-based claims against EU law. Once the Court changed its stance, however, and acknowledged human rights as part of the 'general principles of EU law', this move rapidly gained political approval. It did so initially through a joint declaration of the Parliament, Council, and Commission in 1977,[183] and later through a series of non-binding initiatives and resolutions which included a Declaration of Fundamental Rights and Freedoms by the European Parliament in 1989, and a Community Charter of Fundamental Social Rights signed by eleven of the then twelve Member States in 1989. Human rights eventually found their way back into the EU Treaties with the changes introduced by the Maastricht, Amsterdam, Nice, and finally Lisbon Treaties.

First, Article 6 TEU, which is set out in section 2 above, lists the various sources of human rights within EU law: the Charter, which is given the same binding status as the Treaties, and the ECHR and common national constitutional traditions which inspire the general principles of EU law. The provisions of the ECHR are therefore relevant to EU law in three ways at present: first, those provisions of the Charter which are based on provisions of the ECHR are to have the 'same' meaning as the ECHR provisions; secondly, the ECHR is one of the main sources of inspiration for the general principles of EU law; and thirdly, the provisions of the ECHR will eventually become formally binding on the EU following the EU's accession to the ECHR. By comparison, the provisions of the Charter of Rights and the general principles of EU law are currently binding provisions of EU law, enjoying the same status as provisions of the EU Treaties. This means, as we saw in *Kadi* and other cases, that EU legislation or other measures which conflict with provisions of the Charter or with general principles of EU law must be set aside if they cannot be interpreted in conformity with those principles.

[177] Case C–291/96 *Criminal Proceedings Against Grado and Bashir* [1997] ECR I–5531. This case concerned the position of a national of a Member State in criminal proceedings within another Member State, but since the case did not raise any applicable issue of EC law, the ECJ ruled that it could not consider whether the right to dignity and equality of the non-national had been respected. See also Case C–177/94 *Criminal Proceedings against Perfili* [1996] ECR I–161.

[178] Case C–309/96 *Annibaldi v Sindaco del Commune di Guidoma* [1997] ECR I–7493, concerning regional environmental regulation in Italy.

[179] Case C–333/09 *Noël v SCP Brouard Daude* [2009] ECR I–205.

[180] Case C–535/08 *Pignataro v Ufficio Centrale Circoscrizionale presso il Tribunale di Catania* [2009] ECR I–50.

[181] Case C–45/03 *Oxana Dem'Yanenko*, order of 18 Mar 2004. In its order the ECJ refused to rule on the case of a Ukrainian national who, shortly after attempting suicide, had been deported from Italy due to her failure to apply for a residence permit on time. The case concerned an interpretation of the Schengen Implementation Convention, but the ECJ refused to give a ruling on the basis that the Italian court which had made the reference was not a 'court from which there is no judicial remedy' under Art 68(1) EC. For criticism see J Baquero Cruz (2004) 8 Revisto de Derecho Comunitario Europeo 935.

[182] Case C–411/10, *NS v Home Secretary* and Case C–493/10 *ME v Refugee Applications Commissioner and Minister for Justice and Law Reform*, pending. A request to apply the accelerated procedure to the reference in *NS* was rejected by 0rder of the Court on 1 Oct 2010.

[183] [1977] OJ C103/1.

Secondly, since the enactment of the Amsterdam Treaty in 1999, respect for the values on which the EU is founded has been made a condition of application for membership of the European Union by Article 49 TEU. Indeed, since the enactment of the Lisbon Treaty, the list of values on which the EU is founded has been expanded somewhat, and is now expressed in Article 2 TEU:

> The Union is founded on the values of respect for human dignity, freedom, democracy, equality, the rule of law and respect for human rights, including the rights of persons belonging to minorities. These values are common to the Member States in a society in which pluralism, non-discrimination, tolerance, justice, solidarity and equality between women and men prevail.

Article 3 TEU, in setting out the goals and objectives of the EU, adds further to these by declaring that it 'shall combat social exclusion and discrimination, and shall promote social justice and protection, equality between women and men, solidarity between generations and protection of the rights of the child'. In its external relations Article 3(5) declares that the EU shall, amongst other things, 'contribute to peace, security, the sustainable development of the Earth, solidarity and mutual respect among peoples, free and fair trade, eradication of poverty and the protection of human rights, in particular the rights of the child'.

Thirdly, Article 7 TEU, which was also introduced by the Amsterdam Treaty, empowers the Council to suspend some of the voting and other rights of a Member State which is found by the European Council to be responsible for a serious and persistent breach of the principles in Article 2. Article 7 was amended by the Nice Treaty in 2000 to provide for fair procedures to be followed before a negative determination against a Member State is made, and it now includes the option for the Council to address recommendations to a state which has been found to be clearly at risk of committing a serious breach. The Nice amendments, adopted shortly after Article 7 first came into force, were a result of the controversial Haider affair, which began when a series of diplomatic sanctions was adopted by fourteen of the then fifteen Member States against Austria, in protest against the entry of the far-right Freedom Party into coalition government in Austria in 2000.[184] However, despite the symbolism of Article 7 TEU, and a number of attempts which have been made by the European Parliament to instigate its application, it seems unlikely to have any significant application in practice.[185]

(B) THE FUNDAMENTAL RIGHTS AGENCY

In 2007 an EU Fundamental Rights Agency (FRA) was established, to subsume and replace the existing EU Monitoring Centre for Racism and Xenophobia which was founded in 1997.[186] There was a debate preceding the establishment of the Agency over whether its powers should include monitoring Member States for the purposes of Article 7 TEU, particularly since the previously existing 'network of experts on fundamental rights' had informally begun to monitor the Member States' compliance with the Charter for these purposes,[187] but the Member States refused to include this within the mandate

[184] M Merlingen, C Muddle, and U Sedelmeier, 'The Right and the Righteous?: European Norms, Domestic Politics and the Sanctions against Austria' (2001) 39 JCMS 59.

[186] Council Regulation (EC) No 168/2007 of 15 February 2007 establishing a European Union Agency for Fundamental Rights, [2007] OJ L53/1.

[187] The previous 'network of experts' was established at the request of the European Parliament: see Report on the Situation as regards Fundamental Rights in the European Union (2000), A-5 223/2001, but has since been replaced by a differently functioning network, FRALEX, within the context of the FRA.

of the new FRA. Instead, the FRA's remit mainly covers the collection of information, formulating opinions, highlighting good practices, networking with civil society, and publishing thematic reports. It remains to be seen whether the FRA brings to the area of EU human rights policy the kind of energy and momentum that the establishment of agencies in other fields of EU policy has brought.[188]

(c) EU HUMAN RIGHTS POWERS AND POLICIES
